The word *fecula*, again, originally meant to imply any substance which was derived by spontaneous subsidence from a liquid (from fæx, the grounds or settlement of any liquor); afterwards it was applied to starch, which is deposited in this manner by agitating the flour of wheat in water; and lastly, it has been applied to a peculiar vegetable principle, which, like starch, is insoluble in cold, but completely soluble in boiling water, with which it forms a gelatinous solution. This indefinite meaning of the word *fecula* has created numerous mistakes in pharmaceutic chemistry; elaterium, for instance, is said to be *fecula*, and, in the original sense of the word, it is properly so called, inasmuch as it is procured from a vegetable juice by spontaneous subsidence, but in the limited and modern acceptation of the term, it conveys an erroneous idea; for instead of the active principle of the juice residing in *fecula*, it is a peculiar proximate principle, sui generis, to which I have ventured to bestow the name of elatin.—*Dr. Paris, Pharmacologia, Historical Introduction*, vol. i. pp. 66–8.

Féculence. *s.* Lees; feces; sediment; dregs.

Eckstroem first published a clear account, in 1831, of the singular marsupial economy of the pipefishes. In the Syngnathus acus the sexes come together in the month of April, and the ova pass from the female and are transferred into the subcaudal pouch of the male, being *fecundated* in transitu, and the valves of the pouch immediately close over them. In the month of July the young are hatched and quit the pouch, but they follow their father, and return for shelter into their nursery when danger threatens.—*Owen, Lectures on Comparative Anatomy*, lect. xii.

Fecundátion. *s.* [Lat. *fecundatio*, *-onis*; *fecundus* = prolific, fruitful; *fecunditas*, *-atis.*]

Fédary. *s.* [Lat. *fœdus*, *-eris* = league.] Confederate. *Rare.*
This is the spelling in Dyce's edition, the commoner reading being *feodary*. In the previous editions the derivation is either *fœdus* or *feudum*; an entry which indicates a doubt either as to its import or its form on the part of Johnson. In respect to the former, Hanmer seems to be the only commentator who both takes the form in *o*, and gives it its primary meaning; writing 'a *feodary* is one who holds his estate under the tenure of suit and service to a superior lord.' How a letter could be a feudal vassal he does not explain; neither does any subsequent commentator. On the contrary, most of them repudiate the explanation, so that *confederate* or *accomplice* is the ordinary rendering. This is got at by two ways.

(1) Malone, remarking that the feudal vassal is not called a *feodary*, but a *feodatary* or *feudatory*, considers the *feodary* of the text to mean, in the first instance, a special 'officer appointed by the Court of Wards, by virtue of the statute 32 Henry VIII. ch. 46, to be *present with* and *assistant* to the escheators in every county at finding of offices, and to give evidence for the king' (the Latin term being Escaetori *adjunctus*). 'He was, therefore, the escheator's *associate*; and hence Shakspeare, with his usual licence, uses the word for a confederate or associate in general.' Here the derivation is from *feudum*, and the meaning equivalent to that of a word from *fœdus*; the identity of import being obtained *indirectly*.

(2) With *fedary* as the reading, the connection with *fœdus*, the basis of such secondary forms as *confœderate*, is direct; and the only philological question is whether it is a word formed on a wholly wrong principle (as *fedary*, in such a sense, would be from *fœdus*), or the word *federary*, in a trisyllabic form; in dealing with which either the author or the printer has made the same mistake that is often made now-a-days with the same somewhat unmanageable combination of two *r*'s in words like *registrar*. This last is the editor's view.

See Feodary and Feudary.

Damn'd paper!
Black as the ink that's on thee, senseless bauble!
Art thou a *feodary* for this act, and look'st
So virgin-like without?
Shakespear, Cymbeline, iii. 2.

Féderalist. *s.* Supporter of Federalism.

Will you, O Girondins, parcel us into separate Republics, then; like the Swiss, like your Americans; so that there be *no* metropolis or indivisible French nation any more? Your departmental guard seemed to point that way! Federal Republic? *Federalist?* Men and knitting-women repeat Fédéraliste, with or without much dictionary-meaning; but go on repeating it, as is usual in such cases, till the meaning of it becomes almost magical, fit to designate all mystery of iniquity; and Fédéraliste has grown a word of exorcism and apage-Satanas.—*Carlyle, The French Revolution*, pt. iii. b. iii. ch. ii.

Fee. *s.* See also Feud and Fief.

1. In *Law*. See extracts.

All lands and tenements that are held by any acknowledgement of superiority to a higher lord. All lands and tenements, wherein a man hath a perpetual estate to him and his heirs, &c. are divided into allodium and feudum: allodium is every man's own land, which he possesses merely in his own right, without acknowledgement of any service, or payment of any rent to any other. *Feudum*, or *fee*, is that which we hold by the benefit of another, and in name whereof we owe services, or pay rent, or both, to a superiour lord. And all our land in England, the crown land, which is in the king's own hands, in right of his crown, excepted, is in the nature of feudum: for though a man have land by descent from his ancestors, or bought it for his money; yet is the land of such a nature, that it cannot come to any, either by descent or purchase, but with the burthen that was laid upon him who had novel *fee*, or first of all received it as a benefit from his lord to him and to all such to whom it might descend, or be any way conveyed from him. So that no man in England has directum dominium, that is, the very property or demesne in any land, but the prince in right of his crown: for though he that has *fee* has jus perpetuum et utile dominium, yet he owes a duty for it, and therefore it is not simply his own. *Fee* is divided into two sorts; *fee*-absolute, otherwise called *fee-simple* and *fee*-conditional, otherwise termed *fee*-tail: *fee-simple* is that whereof we are seised in those general words, To us and our heirs for ever: *fee*-tail is that whereof we are seised to us and our heirs, with limitation; that is, the heirs of our body. And *fee*-tail is either general or special: general is where land is given to a man, and the heirs of his body: *fee*-tail special is that where a man and his wife are seised of land to them and the heirs of their two bodies.—*Cowell.*

The constitution of *feuds* had its original from the military policy of the northern or Celtic nations, the Goths, the Huns, the Franks, the Vandals, and the Lombards. ... It was brought by them from their own countries, and continued in their respective colonies as the most likely means to secure their new acquisitions, and to that end large districts or parcels of land were allotted by the conquering general to the superior officers of the army, and by them dealt out again in smaller parcels or allotments to the inferior officers and most deserving soldiers. These allotments were called *feoda*, *feuds*, *fiefs*, or *fees*, which last appellation in the northern languages signifies a conditional stipend or reward. Rewards or stipends they evidently were, and the condition annexed to them was that the possessor should do service faithfully, both at home and in the wars, to him by whom they were given; for which purpose he took the oath 'juramentum fidelitatis,' or oath of *fealty*; and in case of the breach of this condition and oath, by not performing the stipulated service, or by deserting the lord in battle, the lands were again to revert to him who granted them.—*Sir W. Blackstone, Commentaries on the Laws of England*, b. ii. ch. iv.

[*Fee, fief, feudal.*—The importance of cattle in a simple state of society early caused an intimate connection between the notion of cattle and of money or wealth. Thus we have Latin *pecus*, cattle; *pecunia*, money; and Gothic *faihu*, possessions, is identical with Old High German *fihu*, *fehu*, German *vieh*, cattle, Old Norse *fe*, cattle, money, Anglo-Saxon *feoh*, cattle, riches, money, price, reward. Adopted into the Romance tongues the word became Italian *fio*, Provençal *feu*, *fieu*, French *fief*. When it received a Latin dress the introduction of a *d*, as in many other cases, to avoid the *hiatus*, produced the Middle Latin *feudum*, signifying the property in land distributed by the conqueror to his companions in arms, as a reward for their past services, and pledge for their rendering the like for the future. Hence the term *fee*, in English law, for the entire estate in land; *feoffment*, from French *fieffer*, to convey the *fief*, or *fee*, to a new owner. *Fee* has also been appropriated by custom to certain money-payments.—*Wedgwood, Dictionary of English Etymology.*]

There are at common law three manner of rents, rent-service, rent-charge, and rent-seek. . . . There are also other species of rents which are reducible to these three. . . . A *fee-farm* rent is rent-charge issuing out of an estate in fee; of at least one fourth of the value of the lands at the time of its reservation; for a grant of lands reserving so considerable a rent is only letting lands to farm in fee simple, instead of the usual methods for life or years.—*Sir W. Blackstone, Commentaries on the Laws of England*, b. ii. ch. iii.

I'll *pheese* his pride.
Shakespear, Troilus and Cressida, ii. 3.

[*To Fease, Feize, Pheeze.*—This word occurs in two main senses, the connection of which is by no means obvious, though it is impossible to treat them apart: 1, to whip, chastise, harass (Halliwell); and, 2, to ravel out the end of a rope. To *fease*, or *feag*, virgis cadere (Skinner). French, *fesser*, to whip; Provincial Danish, *fikke*; German, *fitzen*; Dutch, *veselen*, to whip a child; Dutch, *fijcken*, ferire. (Kilian.) Provincial English, *feak*, a sharp twitch or pull. For the identity of *fikke* and *fitzen*, compare English *tweak* and *twitch*. The primary image seems to be the sound of switching with a light rod. Swiss, *fausen*, *fitzen*, to switch, to reprehend, give a sharp reproof to; *fitzer*, rods for children; *fiseln*, to switch to and fro, to move to and fro with a light instrument, to fiddle, to write too fine and thin, or scrawl in writing, to rain fine and thin. (Stalder.) Bava-

rian, *fiseln*, to fiddle or twiddle with the fingers as in undoing a knot, passing on the beads of a rosary or the like, to do light minute work; *fisl' arwet* (arbeit), fiddling work. (Schmeller.) Platt Deutsch, *fisseln*, to rain fine and thin, to ravel out threads; *fiss*, *fissel*, a thread, fibre. (Danneil.) Swiss, *fisel*, a thin, poor creature, loose hanging threads; *y'fiesel*, scrawl, writing too fine and thin; *fisern*, to ravel out, rain fine and thin, scrawl in writing, work in a piddling way, with too great attention to niceties; *fitzern*, to scrawl in writing; *fitzen*, a single thin stroke, or thread spun too fine. (Stalder.) Dutch, *vese*, *vesel*, fibres, threads, straws; *veselinge der wortelen*, fibres of the roots; Provincial English, *fussings*, and hanging fibres of roots of plants. (Halliwell.) *Fasylle* of a cloth, fractillus, villus. (Promptorium Parvulorum.) I *fasyll* out as silke or velvet cloth, je raule; my sleeve is *fasylled*, rauelée. (Palsgrave). Swiss, *fätzen*, to ravel out; *fätzele*, hanging threads or tatters; English, *fassings*, hangings, tassels; *fatters*, tatters. (Halliwell.) German, *fasen*, *faseln*, to ravel, fease.—*Wedgwood, Dictionary of English Etymology.*]

All the interpretations of words are not written with the same skill, or the same happiness: things, equally easy in themselves, are not all equally easy to any single mind. Every writer of a long work commits errours, where there appears neither ambiguity to mislead, nor obscurity to confound him: and, in a search like this, many *felicities* of expression will be casually overlooked, many convenient parallels will be forgotten, and many particulars will admit improvement from a mind utterly unequal to the whole performance.—*Johnson, Preface to Dictionary.*

Félony. *s.* See extract.

Felony, in the general acceptation of our English law, comprises every species of crime, which occasioned at common law the forfeiture of land and goods. This most frequently happens in those crimes for which a capital punishment either is or was liable to be inflicted for it. Treason itself, says Sir Edward Coke, was anciently comprised under the name of *felony*.... Not only all offences now ... capital are in some degree or other *felony*; but this is likewise the case with some other offences not punishable with death.... So that, upon the whole, the only adequate definition of *felony* seems to be that which is before laid down.... The word *felony*, or *felonia*, is of undoubted *feodal* original; ... in [the Teutonic or German] language, indeed, ... we ought ... to look for its signification. ... *Fe-lon*, then, according to him [Spelman], is derived from two northern words; *fee*, which signifies (we well know) the *fief*, *feud*, or beneficiary estate; and *lon*, which signifies price or value. *Felony* is, therefore, the same as *pretium feudi*, the consideration for which a man gives up his *fief*; as we say, in common speech, such an act is as much as your life, or estate, is worth. In this sense it will clearly signify the *feodal* forfeiture, or act by which an estate is forfeited, or escheats to the lord.—*Sir W. Blackstone, Commentaries on the Laws of England,* iv. 7.

Félting. *verbal abs.* Act of one who felts; process by which felts are made.

Felting is the process by which loose flocks of wool, and hairs of various animals, as the beaver, rabbit, hare, &c., are mutually interlaced into a compact textile fabric. The first step towards making felt is to mix, in the proper proportions, the different kinds of fibres intended to form the stuff; and then, by the vibratory strokes of the bowstrings, to toss them up in the air, and to cause them to fall as irregularly as possible upon the table, opened, spread, and scattered.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Féltmaker. *s.* One employed in making felt.

They put things call'd executorships upon me,
The charge of orphans, little senseless creatures,
Whom in their childhoods I bound forth to *feltmakers*,
To make 'em lose and work away their gentry.

Coachmen, weavers, *felt-makers*, and other base mechanicks, are now by some thought able ministers and profound doctors of the church!—*Featley, Dippers Dipt*, p. 156.

Félwort. *s.* Popular name for certain plants of the genus Gentiana (but probably applied to other plants) characterized either by their bitterness or astringency; ? when the latter was the case, they might be used for tanning, whence the name from *fell* = *skin.*

Fémale. *s.* [Fr. *femelle*; Lat. *femella.*] Opposite to male in the way of sex.

Communicating male and *female* light,
Which two great sexes animate the world.
Ibid. viii. 148.

If by a *female* hand he had foreseen
He was to die, his wish had rather been
The lance and double ax of the fair warrior queen.
Dryden.

2. In *Prosody. Female rhymes.* Double rhymes, so called because in French, from which the term is taken, they end in *e* weak or feminine; e.g.

'Th' excess of heat is but a fable;
We know the torrid zone is now found habitable.'
(Cowley.)

The *female rhymes* are in use with the Italian in every line, with the Spaniard promiscuously, and with the French alternately, as appears from the Alarique, the Pucelle, or any of their later poems.—*Dryden, Preface to Annus Mirabilis.*

3. In *Mechanics.* See extract.

The screw may be formed either on the outside or inside of the cylinder: in the former case it is called the exterior or male screw; in the latter, the interior or *female* screw.—*Brande, Dictionary of Science, Literature, and Art; Screw.*

His wrath, and so concorporate. *Cleaveland.*

2. Belonging to women.

It will be worth our pains to take notice of some principal of the orders she [Paula] made in those *feminine* academies.—*Fuller, Holy State*, p. 87.

——'s face is almost the only exception I know to the observation, that something *feminine*—not effeminate, mind—is discoverable in the countenances of all men of genius. Look at that face of old Dampier, a rough sailor, but a man of exquisite mind. How soft is the air of his countenance, how delicate the shape of his temples!—*Coleridge, Table Talk.*

Her [Elizabeth Villiers'] influence over him [William III.] she owed not to her personal charms,—for it tasked all the art of Kneller to make her look tolerably on canvass,—not to those talents which peculiarly belong to her sex,—for she did not excel in playful talk, and her letters are remarkably deficient in *feminine* ease and grace,—but to powers of mind which qualified her to partake the cares and guide the counsels of statesmen.—*Macaulay, History of England*, ch. xx.

3. Effeminate; emasculated; wanting manliness.

Ninias was no man of war at all, but altogether *feminine* and subjected to ease and delicacy.—*Sir W. Raleigh, History of the World.*

Angelic, but more soft and *feminine.*
Milton, Paradise Lost, ix. 457.

5. In *Grammar.*

At present [the word *she*] is uninflected. In Anglo-Saxon, however, it was a truly *feminine* form, from *se.* It had not, however, its present power; but rather coincided with the definite article [M.] *se*, [F.] *seo*, [N.] *that*, in Greek [M.] ὁ, [F.] ἡ [N.] τό.—*Dr. R. G. Latham, English Grammar for Classical Schools*, § 97.

In one sense the infinitive is susceptible of gender, though not in the way that a participle is so. The gender of a participle is that of the agent. This for an infinitive is impossible. . . . But the kind of gender which makes *gladius* masculine, and *hasta feminine*, may make the same distinction between any two kinds of action. The Greek infinitives are all neuter; but, logically, they might just as well be masculine or *feminine*, as may be seen in the way in which they are translated into Latin. Though το μισειν = odium, το φθονειν = invidia.—*Id., Elements of Comparative Philology*, p. 721.

By omitting the Substantive (*gender*), Feminine, like Masculine and Neuter, may become, in the way of construction, a Substantive, as, 'there are but few true *feminines* in English.' *Female* applies to sex rather than gender, and is a physiological rather than a grammatical term. *Feminine* applies to gender rather than sex, and is grammatical rather than physiological. See also Gender, Masculine, Neuter.

6. In the following extract it seems to mean anything female, or womanhood in general, nearly equivalent to the Greek τὸ θῆλυ.

O! why did God create at last
This novelty on earth, this fair defect
Of nature? And not fill the world at once
With men, as angels, without *feminine.*
Milton, Paradise Lost, x. 889.

Divide the waters from the land,

And pass at will the boundless deep.
Dryden, Translation from Horace, b. i. ode iii

Shall I mention make
Of the vast mound that binds the Lucrine lake?
Or the disdainful sea, that, shut from thence,
Roars round the structure, and invades the *fence?*

To pass the *fences* and surprise the fair. *Pope.*

2. Guard against; act on the defensive.

Vice is the more stubborn as well as the more dangerous evil, and therefore in the first place to be *fenced* against.—*Locke.*

This sort of inference was probably never carried to a greater length than it was in one particular instance by Descartes, when, as a proof of one of his physical principles, that the quantity of motion in the universe is invariable, he had recourse to the immutability of Divine Nature. Reasoning of a very similar character is however nearly as common now as it was in his time, and does duty largely as a means of *fencing* off disagreeable conclusions.—*J. S. Mill, System of Logic*, b. v. ch. iii. § 8.

When organic substances, under the influences of water, air, and warmth, are abandoned to the reciprocal action of their proximate elements, . . . they are entirely changed and decomposed so that their ultimate principles combine in new proportions and give birth to new compounds. To this process the general name of *fermentation* has been given. . . . The following may be enumerated as sufficiently distinct species of *fermentation*. 1. The saccharine *fermentation* in which starch and gum are converted into sugar. 2. The vinous *fermentation*, in which sugar is converted into alcohol. 3. The mucilaginous *fermentation*, in which sugar is converted into slime instead of alcohol. 4. The acetous *fermentation*, in which alcohol and other substances are converted into vinegar. 5. The putrid *fermentation*, or putrefaction, which characterizes particularly the decomposition of azotized organic substances.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Ferócíousness. *s.* Attribute suggested by Ferocious.

That a precept of courtesy is by no means unworthy of the gravity and dignity of an apostolical mandate, may be gathered from the pernicious effects which all must have observed to have arisen from harsh strictness and sour virtue; such as refuses to mingle in harmless gaiety, or give countenance to innocent amusements, or which transacts the petty business of the day with a gloomy *ferociousness* that clouds existence.—*Johnson, Sermons*, p. 206. (Ord MS.)

Férret. *s.* [see last extract.] Animal (akin to the martens and polecats, partially domesticated,) so called, used chiefly for tracking rats and rabbits in their holes and burrows, over which it has a special advantage, from the nature of its eyesight, which is best in darkened places: (the eye being red, like that of an albino, has supplied numerous similes and metaphors, whence the word is often used *adjectivally*). Mustela furo.

'Let us have a look at this chap,' said the first, examining Vanslyperken, whose peaked nose and chin, small *ferret*-eyes, and downcast look, were certainly not in his favour; neither were his old and now tattered habiliments. Certainly no one would have taken Vanslyperken for a king's officer—unfortunately they took him for something else.—*Marryat, Snarleyyow*, vol. iii. ch. iii.

[*Ferret.*—1. Spun silk and riband woven from it. Italian, *fioretto*; French, *fleuret*, coarse ferret-silk (Florio); floret-silk (Cotgrave). German, *florett*, the outer envelop of the silk-cod, flirt or flurt-silk, ferret-silk, ferret. *Florett-band*, a ferret riband. (Küttner.) 2. Italian, *furetto, feretto*; French, *furet*; German, *frette, frett-wiesel*, a ferret, an animal used in hunting rabbits or rats in holes otherwise inaccessible. It is commonly supposed that the name of the animal has given rise to the verb signifying to poke in holes and corners, to search out. Italian, *ferettare, furettare*, to ferret or hunt in holes, to grope or fumble (Florio); French, *fureter*, to search, hunt, boult out, spy narrowly into every hole and corner. (Cotgrave.) It seems to me far more likely that the ferret (exclusively a tame animal) is named from the purpose for which it is kept, viz. for rooting or poking in holes for rabbits or vermin. The German *frettwiesel* would signify a weasel kept for the purpose designated by the verb *fretten*. Now we have Provençal *fretar*, French *frotter*, Bavarian *fretten*, to rub, to move to and fro over a surface. Moreover, *fretten* is identified with Provincial English *froat*, Dutch *wroeten*, by the common use of the three in the peculiar sense of to drudge, to earn with pains and difficulty. *Wroeten* is also to poke the fire, to poke or root in the ground, as a pig with his snout. The same train of thought is found in Provençal *fregar*; Italian, *fregare*, to rub, *frugare*, to rub, to pinch and spare miserably, to grope, to fumble, *furegare* (for *ferugare*), to fumble or grope for, to sweep an oven. And as *fregare, frugare* give rise to *furegare* by the insertion of an *e* (as in *umberella* for *umbrella*), so *fretten, frotter, wroeten*, are converted by a similar change into Italian *ferettare*,

(*ferutare*) *furetare*. The strongest objection to the foregoing explanation is French *furon* (Patois de Champagne), Spanish *huron*, a ferret. But *furegare*, *furettare*, to poke, grope, or search out, have so much the appearance of diminutives from a simple *furare*, that *furon* may well have been formed from that hypothetical form in the same way as Italian *furegone* from *furegare*, and with the same sense of poker, searcher-out.—*Wedgwood, Dictionary of English Etymology.*]

Than dreary-Mars-carousing nectar bowls.
Marlowe and Chapman, Translation of Hero and Leander.

If earth, industrious of herself, *fetch* day

Fetch. *s.* [see extract.] Apparition of one who is alive.

[*Fetch*-lights, *fetch*-candles, corpse-candles, or dead-men's candles, are appearances seen at night, as of candles in motion, supposed to be in attendance on a ghostly funeral, and to portend the death of some one in the neighbourhood. (Brand's Popular Superstitions.) The superstition obviously agrees with the notion of the Will o' the wisp or ignis fatuus, which is known in Holland by the name of Doodkeerse, death-candle, or dead-man's candle. The name might plausibly be explained as if the apparition were something sent to *fetch* the fated person to the other world, but probably it has a more ancient origin than would be indicated by such a derivation. The *Vætt* in Scandinavian mythology is a kind of goblin supposed to dwell in mounds and desert places, and the ignis fatuus is called in Norway *Vætte-lys*, the Vætt's candle, the identity of which with the Pembrokeshire *fetch*-light, or *fetch*-candle, can hardly be doubted.—*Wedgwood, Dictionary of English Etymology.*]

Fétching. *verbal abs.* Reaching.

The conditions of weapons, and their improvements, are the *fetching* afar off, for that outruns the danger, as it is seen in ordnance and muskets.—*Bacon, Essays.*

And then he gave prodigious *fêtes*—
All Warsaw gather'd round his gates.
Byron, Mazeppa.

And long, and late, at many a *fête*
Gooseberry champagne shall shine,
And as old as it was in Twenty-eight
Shall it be in Twenty-nine. *Praed.*

Fétid. *adj.* [Fr. *fétide*; Lat. *fœtidus.*] Foul smelling; stinking; having a smell strong and offensive.

Most putrefactions are of an odious smell; for they smell either *fetid* or mouldy.—*Bacon, Natural and Experimental History.*

In the most severe orders of the church of Rome, those who practise abstinence, feel after it *fetid* hot eructations.—*Arbuthnot.*

Emerging from a *fetid* dungeon, after the depression of a long confinement, with the weight of his recantation upon him, against an adverse court, he [Jerome of Prague] stood his ground with wonderful copiousness, fluency, and readiness of language, and with consummate dexterity, now deeply pathetic, now with playful wit or taunting sarcasm, confounding, bewildering, overpowering his adversaries. — *Milman, History of Latin Christianity*, b. xiii. ch. ix.

And on his front a snowy star he bore.
Dryden, Translation of Virgil.

But first, outspent with this long course,
The Cossack prince rubb'd down his horse,
And made for him a leafy bed,
And smooth'd his *fetlocks* and his mane,
And slack'd his girth, and stripp'd his rein,
And joy'd to see how well he fed. *Byron, Mazeppa.*

[*Fetlock.*—The hair that grows behind on a horse's feet. Now generally applied to the joint on which the hair in question grows. We should naturally resolve the word into *foot-lock*, in accordance with Swedish *huf-skægg*, hoof-beard; but Swiss *fiesloch*, *fisloch*, Dutch *vitlok*, *vitslok* (Halma in v. *fanon*), the pastern of a horse, lead in another direction. Platt Deutsch *fiss*, fine thread, fibres (Dannell); Swiss *fisel*, *gefisel*, loose, unravelled threads hanging from a garment, also the *fetlock* or long hair growing on the pastern. (Stalder.)—*Wedgwood, Dictionary of English Etymology.*]

When your master is most busy in company, come in and pretend to *fettle* about the room; and if he chides, say you thought he rung the bell.—*Swift, Advice to Servants, Directions to the Footman.*

[*To Fettle.*—To set in order, to repair anything that is broken or defective, to set about anything; *fettle*, good condition, proper repair. Perhaps the fundamental idea is that of binding up, binding together, from Anglo-Saxon *fetel*, a girdle; Swedish *faetill*, a girdle, band, handle of a sword, the equivalent of German *fessel*, a thong, from *fassen*, to hold. Thus *fettle* is explained by Coles, *se accingere ad aliquid. . . . To fettle to*, to go about a business, to buckle to. Old Norse, *fiötla*, nodare et renodare; *fiötlar*, nooses, snares. (Halderson.)

'The Scottys into gud aray
Togyddyr knyt thaim, apertly
Tuk the feld and manlykly
Fetlyt wyth thare fays in fycht.'
(Wyntoun in Jamieson.)

On the other hand *fettle* is often used in a sense which leads in a totally different direction. It is applied to the light work required to finish the preparations of a thing. Swift desires the footman, when he knows his master to be most busy, to 'come in and pretend to *fettle* about the room.' Here it seems to agree with Old Norse *fiatla*, actus levis, frivolus, fiddling action; *fiatla*, to fumble *fitla*, modicum tango vel apparo; leviter digitos admovere; *fitla vid*, leviter attingere; Norse *fitla*, to labour at a thing one cannot get right, as in untying a knot (Aasen); Platt Deutsch, *fiseln*, to pass the fingers gently over; *fisseln*, to bustle about in cleaning; *fissel-maken* (fettle-maid), an under housemaid. (Bremisches Wörterbuch.)—*Wedgwood, Dictionary of English Etymology.*]

2. Primary element in the feudal system.

Feúdal. *adj.* Having the nature of a feud; constituted by a system of feuds.

Wales, that was not always the *feudal* territory of England, having been governed by a prince of their own, had laws utterly strange to the laws of England.—*Hale.*

A *feudal* kingdom was properly the encampment of a great army; military ideas predominated, military subordination was established, and the possession of land was the pay which the soldiers received for their personal service.—*Robertson, History of Scotland.*

The word 'fee' in the northern languages signifies a 'conditional stipend' or 'reward;' and by combination with the northern 'odh,' 'odhal,' or 'udal,' which signifies 'proprietas,' will be formed 'fee-odh,' or 'foedum,' to denote a feeodhal, or *feudal*, or stipendiary property.—*Sir W. Blackstone, Commentary on the Laws of England.*

Spelt (as it generally was up to the time of Blackstone, Blackstone included) with *e.*

Feúdary. *s.* Holder of an estate by a feudal tenure.

Nebuchadnezzar the great king of Babylon comes up, and sweepes away both the lord and his *feodarie*, Pharaoh and Jehoiakim.—*Bishop Hall, Josiah's Death.* (Ord MS.)

[*Feudary* is] one who holds his estate under the tenure of suit and service to a superior lord. This word is cited by Dr. Johnson upon the authority of Sir T. Hanmer, who has thus defined *feodary* in his note on *fedary* in Shakspeare. But the feudal vassal, as Mr. Malone observes, was not called a *feodary*, but a *feodatary* or *feudatory*. A *feodary* was an officer appointed by the court of wards to be present with, and assistant to, the escheators in every county at the finding of officers, and to give in evidence for the king. Stat. 32 Hen. VIII. ch. 46. See also Bullokar's Expositor.—*Todd.*

Because it long has rag'd within my blood? *Dryden.*

He had never dreamed in his life, till he had the *fever* he was then newly recovered of.—*Locke.*

Existing opinions as to the nature of *fever*, particularly as respects the changes immediately following the exciting causes, may be reduced to the following:—1st. That *fever* arises from inflammation, seated, according to some, in the brain, and, to others, in the digestive mucous surface, but sometimes also reflected upon the brain:—2nd. That it depends upon congestion of the large vessels and internal viscera:—3rd. That it proceeds from the direct contamination of the circulating fluids by its material cause,—the nervous symptoms, local affections, &c., appearing in its course, arising from the action of vitiated blood upon the organs:—4th. That the causes first affect the cerebro-spinal nervous system, the phenomena of *fever* arising from the changes produced by them upon this system:—and, 5th. That the morbid impression is first made upon the organic or ganglial nervous sytem, and, owing to the circumstance of this system actuating the circulating, secreting, and excreting viscera, is manifested, in an especial manner, by the changes observed in the state of vascular action, in the animal temperature, in the functions of secretion and excretion, in the circulating fluids, and in the other functions which are more or less intimately dependent upon the ganglial system.—*Copland, Dictionary of Practical Medicine*, in voce.

A *fibre*, in physick, is an animal thread, of which some are soft, flexible, and a little elastick; and these are either hollow, like small pipes, or spongious and full of little cells, as the nervous and fleshy *fibres*; others are more solid, flexible, and with a strong elasticity or spring, as the membranous and cartilaginous *fibres*: and a third sort are hard and flexible, as the *fibres* of the bones. Some so very small as not to be easily perceived; and others so big as to be plainly seen; and most of them appear to be composed of still smaller *fibres*: these *fibres* first constitute the substance of the bones, cartilages, ligaments, membranes, nerves, veins, arteries, and muscles.—*Quincy.*

And every slacken'd *fibre* drops its hold,
Like nature letting down the springs of life:

Dryden, Spanish Friar.

Fíbril. *s.* [Lat. *fibrilla*, diminutive of *fibra*.] Fibre or string.

The muscles consist of a number of fibres, and each fibre of an incredible number of little *fibrils* bound together, and divided into little cells.—*Cheyne, Philosophical Principles of Natural Religion.*

Fíbrillous. *adj.* Relating to the fibres.

Hence arise those uneasy sensations, pains, *fibrillous* spasms, &c. that hypochondriacks usually complain of.—*Dr. Kinneir, Essay on the Nerves*, p. 14: 1739.

Fíbrine. *s.* In *Physiology*. See extract.

Fibrine constitutes the principal part of animal muscle; it exists in the chyle and the blood, and may be regarded as the most abundant constituent of animal bodies. It may be obtained in a pure state by agitating or beating new-drawn blood with a bundle of twigs, when it will attach itself to them

in long reddish filaments, which may be deprived of colour by working them with the hands under a streamlet of cold water, and afterwards freed from any adhering grease by digestion in alcohol or ether. *Fibrine*, thus obtained, is solid, white, flexible, slightly elastic, insipid, inodorous, denser than water, but containing four-fifths of its weight of it, and without action on litmus. When dried, it becomes semi-transparent, yellowish, stiff, and brittle; water restores its softness and flexibility.... As the basis of flesh, it is a very nutritious substance, and is essential to the sustenance of carnivorous animals.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Fibrinous. *adj.* Consisting of fibrine.

Of this inflammatory lymph there are described by Mr. Paget two varieties—the *fibrinous* and the corpuscular.—*Watson, Lectures on the Principles and Practices of Physic*, lect. x.

Ferous. *adj.* Composed of fibres; consisting of fibre.

The difference between bodies *fibrous* and bodies ...eous is plain; for all wool and tow, and cotton ...d silk, have a greediness of moisture.—*Bacon, ...atural and Experimental History.*

I saw Petreus' arms employ'd around
well-grown oak, to root it from the ground;
his way and that he wrench'd the *fibrous* bands,
...e trunk was like a sapling in his hands.
Dryden.

W... The *fibrous* and solid parts of plants pass unaltered through the intestines.—*Arbuthnot, On the Nature and Choice of Aliments.*

The *fibrous* system consists—1st, Of *fibrous* membranes—membranæ fibrosæ—as the periosteum, the cerebral and spinal dura mater, the *fibrous* capsules, the sheaths of tendons, the aponeurotic expansions, the sclerotica, &c.... 2ndly, Of *fibrous* cords, in which the fibres are formed into fasciculi—organa fibrosa fascicularia. Several of the former should be viewed as compound structures; as the dura mater, the tunica albuginea, the fibro-synovial sheaths, &c.; but the *fibrous* tissue constitutes their chief basis. With the exception of the *fibrous* membranes of a few glandular organs, it is easy to demonstrate that all the *fibrous* structures are connected together, and that the periosteum is the centre and basis of connection. This tissue consists of whitish, or greyish, shining, satiny fibres, of great fineness and strength. These are interwoven in various directions, in the first division of this tissue; and are placed parallel and very close to each other, in the second. Their cohesion is very great. Hence the *fibrous* tissue is the strongest in the body.... During prolonged debility, and in cases of extreme vital exhaustion, the cohesion of this tissue is diminished, and laceration or extension of it takes place with less violence. During constitutional disorder, or contamination of the system by specific maladies, and in the scrofulous or gouty diathesis, it often becomes the seat of morbid action, and then evinces vital properties in a most evident manner. Injuries and irritations of this tissue, particularly when the vital functions are impaired or disordered, are often the source of the most violent and dangerous affections. —The *fibrous* tissue, however, is, with the exception of the periosteum and the capsules of joints, not very prone to disease; and, even when these are affected, a scrofulous or syphilitic taint has been the cause. —*Copland, Dictionary of Practical Medicine.*

Fibster. *s.* Liar in a small way.

She found him grinning over the bowl. She was discovered, and she blushed a little. 'Thank you, Monseigneur,' she said. 'You see your ladies have been here. How good of you! I couldn't come before—I was in the kitchen making a pudding.'—'I know you were, I saw you through the area-railings as I drove up,' replied the old gentleman.—'You see everything,' she replied.—'A few things, but not that, my pretty lady,' he said good-naturedly. 'You silly little *fibster!* I heard you in the room over head, where I have no doubt you were putting a little rouge on.'—*Thackeray, Vanity Fair.*

Fíbula. *s.* [Latin.] In *Anatomy.* See extract.

[The *fibula* is] the outer and lesser bone of the leg, much smaller than the tibia: it lies on the outside of the leg; and its upper end, which is not so high as the knee, receives the lateral knob of the upper end of the tibia into a small sinus, which it has in its inner side. Its lower end is received into the small sinus of the tibia, and then it extends into a large process, which forms the outer ankle.—*Quincy.*

We believe a very little examination of the facts will suffice to show that the believers have been more consistent than their oracle; and that they escape from the charge of *fickleness* at the expense of the authority due to the faith last proclaimed from his altar. It would, indeed, be difficult to select one leading principle or prevailing sentiment in Mr. Burke's latest writings, to which something extremely adverse may not be found in his former, we can hardly say his early works.—*Lord Brougham, Historical Sketches of Statesmen of the Reign of George III., Mr. Burke.*

A fig for you. Fig, here, means *snap of the fingers,* as a sign of contempt. When we snap our fingers, and the end of the middle finger comes in contact with the end of the thumb, the space enclosed has the outline of a *fig.* A line in Dante illustrates this:

'Ei fece 'l *fico* con ambedue le mane;'
i.e. He made the *fig* with both hands.

In the older writers the Italian *fico* is often used, and is entered by Johnson as an English word. It is scarcely this; nor, with such an expression as the one under notice, is it wanted.

The chariot had not proceeded far, before Mr. Adams observed it was a very fine day. 'Ay, and a very fine country, too,' answered Pounce. 'I should think so more,' returned Adams, 'if I had not lately travelled over the Downs, which I take to exceed this, and all other prospects in the universe.' Of late years, to dispense with Cocker's rigours,
And grow quite *figurative* with their figures.

But in all other styles, passages without end occur, of the highest order—epigram—pathos—metaphor in profusion, chequered with more didactic and sober diction. Nor are his purely *figurative* passages the finest even as figured writing; he is best when the metaphor is subdued, mixed as it were with plainer matter to flavour it, and used not by itself, and for its own sake, but giving point to a more useful instrument, made of more ordinary material; or at the most, flung off by the heat of composition, like sparks from a working engine, not fire-works for mere display.—*Lord Brougham, Historical Sketches of Statesmen of the Reign of George III., Mr. Burke.*

Thou hast a brain, such as it is indeed:
On what else should thy worm of fancy feed?
Yet in a *filbert* I have often known
Maggots survive when all the kernel's gone.
Lord Dorset.

[This is derived by Junius and Skinner from the long beards or husks, as corrupted from *full beard*, or *full* of *beard*. It probably had its name, like many other fruits, from some one that introduced or cultivated it; and is therefore corrupted from *Filbert* or *Filibert*, the name of him who brought it hither. Such is Dr. Johnson's etymological account of this word. Gower gives us a very different one in the following lines; which Mr. Horne Tooke also has agreed with me in noticing:

With that upon a grene bough
A seynt of sylke, which she [Phillis] there had,
She knit; and so herself she lad,
That she about her white swere
It did, and henge hirselfe there.
Whereof the goddes were amoved,
And Demophon was reproved,
That of the goddes' providence
Was shape such an evidence
Ever afterwarde ayen the slowe,
That Phillis in the same throwe
Was shape into a nutte tree,
That all men it might see:
And after Phillis Philberd
This tree was cleped in the yerd:
And yet, for Demophon to shame,
Unto this day it beareth the name.'
(Confessio Amantis, b. iv.)

The *filbert* is said to have been brought from Pontus. Huloet calls it 'Pontica nux.'—*Todd.*]

Of the three derivations suggested by the extracts, Johnson's alone has a presumption in its favour; though *fill* + *beard* has its supporters. No details, however, about the hypothetical *Filbert* are known. All that the present Editor sees his way to is the origin of the second syllable *-bert*, which he believes to be the *-bard-* in *Lombardy*. In Nemnich, where the *filbert* is treated as a variety of the hazel, one of its German synonyms means, in the first instance, *Lombardy-nut*, afterwards transformed into *Lampert's nut, Lombardei-nuss, Lampartes-nuss*. How *Lampert* became *Philibert* (for some confusion of this kind is likely) has yet to be discovered.

There is no servant of God but feares *filially*.—*Bishop Hall, Holy Panegyricke.* (Ord MS.)

Filiation. *s.* Relation of a son to a father; correlative to paternity.

The relation of paternity and *filiation*, between the first and second person, and the relation between the sacred persons of the Trinity, and the denomination thereof, must needs be eternal, because the terms of relation between whom that relation ariseth were eternal.—*Sir M. Hale, Origination of Mankind.*

Among all the sons of God, there is none like to that One Son of God. And if there be so great a disparity in the *filiation*, we must make as great a difference in the correspondent relation.—*Bishop Pearson, On the Creed*, art. i.

Filiety. *s.* Sonship.

It is obvious, in fact, that if we take any two correlative names, father and son, for instance, although the objects denoted by the names are different, they both, in a certain sense, connote the same thing. They cannot, indeed, be said to connote the same attribute: to be a father is not the same thing as to be a son. But when we call one man a father, another his son, what we mean to affirm is a set of facts, which are exactly the same in both cases. To predicate of A that he is the father of B, and of B that he is the son of A, is to assert one and the same fact in different words. The two propositions are exactly equivalent: neither of them asserts more or asserts less than the other. The paternity of A and the *filiety* of B are not two facts, but two modes of expressing the same fact. That fact, when analysed, consists of a series of physical events or phenomena, in which both A and B are parties concerned, and from which they both derive names. What those names really connote, is this series of events: that is the meaning, and the whole meaning, which either of them is intended to convey. The series of events may be said to constitute the relation; the schoolmen called it the foundation of the relation, fundamentum relationis.—*J. S. Mill, System of Logic*, p. 45.

Filligree is . . . intertwisted fine wire, used for ornamental gold and silver trinkets. The wire is seldom drawn round, but generally flat or angular; and soldered by gold or silver solder with borax and the blowpipe. [*Fillip*, says Skinner, is a word formed from the sound. Filter. *s.* Percolator; strainer.

That the water, passing through the veins of the earth, should be rendered fresh and potable, which it cannot be by any percolations we can make, but the saline particles will pass through a tenfold *filter*.—*Ray, Wisdom of God manifested in the Works of the Creation.*

Filtration is a process purely mechanical for separating a liquid from the undissolved particles floating in it, which liquid may be either the useful part, as in the vegetable infusions, or of no use, as the washings of mineral precipitates. The filtering substance may consist of any porous matter, ... as porous earthenware, unsized paper, cloth of many kinds, and sand. ... *Filter* papers are first cut square, and then folded twice diagonally into the shape of a cornet, having the angular parts cut off. ... A *filter* covered with the sediment is most conveniently washed by spouting water upon it with a little syringe. ... In general, relatively to the application of pressure to *filters*, it may be remarked that it cannot be pushed very far without the chance of deranging the apparatus or rendering the liquor muddy. The enlargement of the surface is, generally speaking, the safest and most efficacious plan of increasing the rapidity of the filtration, especially for liquids of a glutinous nature. This expedient is well illustrated in the creased bag *filter* now in use in most of the sugar refineries of London.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

The light summer hemp, that bears no seed, which is called *fimble* hemp.—*Mortimer, Husbandry.*

[*Fimble.*—German *femel, femel-hanf, fimmel*, the male plants of hemp which are soonest ripe, and have to be picked out by hand from among the female, left to ripen their seed. The larger and stronger growth of the seed-bearing plants probably led to their being called in England *carl*, or *male-hemp*, and this perhaps has led to the supposition that *fimble* is a corruption of *female*, as the word is commonly explained. The real signification is the act of picking out the early ripe plants, which is termed *fimmeln* in German, and *fémeler* in the North of France, while the plants so picked out are called *féméles*. (Hécart.) The Dutch *fimelen*, or *femelen*, is applied to any light action with the fingers, to tease wool, flax, or hemp, to trifle, gesticulari digitis, frustra factitare rem frivolam. *Femel*, cannabis brevior, discerpta, convulsa, linum carptum, vulsum. (Kilian.) The verb is a diminutive of Frisian *fample*, to grasp at anything with the hands (Outzen); Swedish *famla*, to grope. To *fimble*, to touch lightly and frequently with the ends of the fingers. (Forby.) Old Norse *fipla*, Provincial Danish *fiple*, to touch with the fingers, to handle.—*Wedgwood, Dictionary of English Etymology.*]

Fimbriate. *v. a.* [Lat. *fimbria.*] Fringe; hem. *Rare*, except in *Heraldry*, where in its *participial* or *adjectival* form it means *bordered*, and in *Botany*, where it means *fringed*. (In the latter the purely *adjectival* form *fimbriate* is the *commoner*).

Besides the divers tricking or dressing [heraldick crosses]; as piercing, voiding, *fimbriating*, &c. insomuch that crosses alone, as they are variously disguised, are enough to distinguish all the several families of gentlemen in England.—*Fuller, History of the Holy War*, p. 271.

Upon your favours, swims with *fins* of lead,
And hews down oaks with rushes.
Shakespear, Coriolanus, i. 1.

Thus at half-ebb a rolling sea
Returns, and wins upon the shore;
The watry herd, affrighted at the roar,
Rest on their *fins* awhile, and stay,
Then backward take their wond'ring way.
Dryden.

In most fish, besides the great *fin*—the tail—we find two pairs of *fins* upon the sides, two single *fins* upon the back, and one upon the belly, or rather between the belly and the tail. The balancing use of these organs is proved in this manner. Of the large-headed fish, if you cut off the pectoral *fins*, that is the pair which lies close behind the gills, the head falls prone to the bottom; if the right pectoral *fin* only be cut off, the fish leans to that side; if the

ventral *fin* on the same side be cut away, then it loses its equilibrium entirely; if the dorsal and anal *fins* be cut off, the fish reels to the right and left: when the fish dies, that is, when the *fins* cease to play, the belly turns upwards. The use of the same parts for motion is seen in the following observation upon them when put into action. The pectoral, and more particularly the ventral *fins*, serve to raise and depress the fish; when the fish desires to have a retrograde motion, a stroke forward with the pectoral *fin* effectually produces it; if the fish desire to turn either way, a single blow with the tail the opposite way sends it round at once; if the tail strike both ways, the motion produced by the double lash is progressive, and enables the fish to dart forwards with an astonishing velocity. The result is not only in some cases the most rapid, but in all cases the most gentle, pliant, easy, animal motion with which we are acquainted. However, when the tail is cut off the fish loses all motion, and it gives itself up to where the water impels it. The rest of the *fins*, therefore, so far as respects motion, seem to be merely subsidiary to this. In their mechanical use the anal *fin* may be reckoned the keel; the ventral *fins* outriggers; the pectoral *fins* the oars; and if there be any similitude between these parts of a boat and a fish, observe that it is not the resemblance of imitation, but the likeness which arises from applying similar mechanical means to the same purpose. —*Paley, Natural Theology.*

All writers on animal mechanics have shown how admirably the whole form of the fish is adapted to the element in which it lives and moves.... The pectoral *fins*, those curtailed prototypes of the fore-limbs of other Vertebrata, with the last segment, or hand, alone projecting freely from the trunk,... present a condition analogous to that of the embryo buds of the homologous members in the higher Vertebrata.... In the act of flexion, the *fin* slightly rotates and gives an oblique stroke to the water.... We find, moreover, as numerous and striking modifications of the pectoral *fins*, in adjustment to the peculiar habits of the species in Fishes, as we do of the fore limbs in any of the higher classes. This *fin* may wield a formidable and special weapon of offence, as in many Siluroid fishes.... The ventral *fins* or homologues of the hind-legs are still more rudimental—still more embryonic, having in view the comparison with the stages of development in a land animal—than the pectoral *fins*; and their small proportional size reminds the homologist of the later appearance of the hind limbs, in the development of the land Vertebrate.... In most fishes the ventral *fins* merely combine with the pectoral *fins* in raising, and in preventing as outriggers the rolling of, the body; but some very interesting modifications of the ventral *fins*, in relation to particular habits of certain species, may be noticed. In the Blennies, the Forked Hake, the Forked Beard, and some other fishes, the ventral *fins* are reduced to *filamentary* feelers..., In the large-headed thoracic and jugular fishes, the loose suspension of these *fins*, and the absence of any connection with a sacral part of the vertebral column, permits their transference forwards, to aid the pectoral *fins* in raising the head.—*Owen, Lectures on Comparative Anatomy.*

Finable. *adj.* Capable of being fined; admitting, liable to, or deserving, a fine.

Shook; but delay'd to strike, though oft invok'd
With vows, as their chief good, and *final* hope.

Finále. *s.* [Ital.] End: (generally applied with the notion of *grandeur*, *show*, or *magnificence*, to the conclusion of anything, especially a theatrical representation in which the grand tableau in a scenic, or a great crash of music in a musical, entertainment forms the conclusion).

Finálity. *s.* Final character; completeness: (often, especially in modern politics, used *adjectivally*, indicating a man who, having made certain concessions, considers that he has done everything needed).

He was a middle-class Whig, had faithfully supported that party in his native town during the days they wandered in the wilderness, and had well earned his share of the milk and honey when they vanquished the promised land. In the spring-tide of liberalism, when the world was not analytical of free opinions, and odious distinctions were not drawn between *finality* men and progressive reformers, Mr. Wallinger had been the popular leader of a powerful body of his fellow-citizens, who had returned him to the first reform parliament, and where, in spite of many a menacing registration, he had contrived to remain.—*Disraeli the younger, Coningsby.*

Finally. *adv.* In a final manner.

I hope, however, he will not rely too much on the fertility of Lord North's genius for *finance.*—*Junius, Letters*, i.

With the accent on the second syllable; though Dr. Johnson places it on the first. It may be curious to observe, that we formerly used the word *finance* in the sense of *an end*; and that, in the enlarged edition of Bullokar, 1656, it has found a place. But it had then been long obsolete.—*Todd.*

[In the forensic language of the middle ages the Latin *finis* was specially applied to the termination of a suit, and *finalis dies*, *finale judicium*, *finalis concordia*, were respectively the day of trial, the judicial decision, or the agreement by which the suit was terminated. *Finis* by itself is frequently used for the settlement of a claim by composition or agreement, as by Matthew Paris in the Life of Henry III. 'Clanculo captus fuit, et tacito facto *fine*, interpositis fide et juramentis et chartis, caute dimissus.' 'Quod illi cognoscentes et malum timentes acceperunt consilium interse ut si quo modo possent fœdus cum Imperatore componerent, dicentes, Nullum ulterius ab eo *finem* habebimus (we shall get no further terms from him), sed junctus Romanis omnes nos de partibus illis expellet.' (Ducange.) The clergy and females who held in capite having been summoned to London to pass over with the king on military duty into France, it was announced, 'quod archiepiscopi, &c., servitium domino regi debentes possent *facere finem* pro eodem (might compound for it) si vellent.' (Bart. Cotton. p. 324.) It was then transferred to the money paid as the price of settlement, and Latin *finare*, *finire*, French *finer*, were used in the sense of paying an exaction or composition. 'Omnes vero plagæ aut feritæ—quæ evenerint—sicut supra decretum est *finiantur*,' shall be compounded for. (Ducange.) 'Lui dit qu'il ne le laisserait point aller jusqu'à ce qu'il eust *finé* a luy, et force luy fut *finer* au chevalier à cinq cens livres.' (Joinville.) Hence *fine* in English and the derivative *finance* in French were used in the sense of an exaction or compulsory payment. Monstrelet informs us that Jacques Cœur was made prisoner, 'pource qu'il a extorqué indeuement plusieurs grands *finances* sur le pays du Roi, tant en Languedoc, Languedouy, comme ailleurs.' The name of *finance* was subsequently extended to all monies levied on the people for the behoof of the royal treasure or revenue.—*Wedgwood, Dictionary of English Etymology.*]

Fináncial. *adj.* Relating to, or connected with, finance.

Europe was filled with astonishment, when they saw England borrow in one year twelve millions. It was thought, and very justly, no small proof of national strength and *financial* skill, to find a fund for the payment of the interest upon this sum.—*Burke, Observations on the present State of the Nation*: 1769.

Godolphin, whom he did not love, and could not control, but whose *financial* skill had been greatly missed during the summer, was brought back to the Treasury, and made First Commissioner. He well knew that mere names exercise a mighty influence on the public mind; that the most perfect tribunal which a legislator could construct would be unpopular if it were called the Star Chamber; that the most judicious tax which a *financier* could devise would excite murmurs if it were called the Shipmoney; and that the words Standing Army then had to English ears a sound as unpleasing as either Shipmoney or Star Chamber.—*Macaulay, History of England*, ch. xxiii.

Finch. *s.* [A.S. *finc.*] Bird so called, chiefly of the genus Fringilla: (a *generic*, rather than a *specific*, name when standing alone; so much so that it is difficult to say to what bird the simple name applies. Hence, when its signification is definite and undoubted, it is the *second element* in a *compound*, as in *bramblefinch*, *bullfinch*, *chaffinch*, *goldfinch*, *greenfinch*, *hawfinch*).

2. Legal fiction by which certain suits are ended. From the payment herein implied come the meanings under the next head.

The most distinguishable properties of *fines* are, 1, the extinguishment of dormant titles;... 2, barring the issue in tail immediately;... 3, binding femes covert. These constitute the peculiar qualities on account of which a *fine* is most usually, if not always, resorted to, as one of the most valuable of the common assurances of the realm; being now, in fact, a fictitious proceeding to transfer or secure real property by a mode more efficacious than ordinary conveyances.—*Tomlin, Law Dictionary.* (Granger.)

What poet ever *fin'd* for sheriff? or who
By rhymes and verse did ever lord mayor grow?
Oldham.

The kings of France indeed claimed the prerogative of forbidding the marriage of their vassals' daughters to such persons as they thought unfriendly or dangerous to themselves; but I am not aware that they ever compelled them to marry, much less that they turned this attribute of sovereignty into a means of revenue. But in England, women, and even men, simply as tenants in chief, and not as wards, *fined* to the crown for leave to marry whom

they would, or not to be compelled to marry any other. Towns not only *fined* for original grants of franchises, but for repeated confirmations. The Jews paid exorbitant sums for every common right of mankind, for protection, for justice. In return, they were sustained against their Christian debtors in demands of usury, which superstition and tyranny rendered enormous. Men *fined* for the king's good will; or that he would remit his anger; or to have his mediation with their adversaries. Many *fines* seem, as it were, imposed in sport, if we look to the cause; though their extent, and the solemnity with which they were recorded, prove the humour to have been differently relished by the two parties. Thus the bishop of Winchester paid a tun of good wine for not reminding the king (John) to give a girdle to the countess of Albemarle; and Robert de Vaux five best palfreys that the same king might hold his peace about Henry Pinel's wife. Another paid four marks for leave to eat (pro licentia comedendi). But of all the abuses which deformed the Anglo-Norman government, none was so flagitious as the sale of judicial redress. The king, we are often told, is the fountain of justice; but in those ages it was one which gold alone could unseal. Men *fined* to have right done them; to sue in a certain court; to implead a certain person; to have restitution of land which they had recovered at law. From the sale of that justice which every citizen has a right to demand, it was an easy transition to withhold or deny it. *Fines* were received for the king's help against the adverse suitor; that is, for perversion of justice, or for delay. Sometimes they were paid by opposite parties, and of course for opposite ends. These were called counter-*fines*; but the money was sometimes, or, as Lord Lyttleton thinks, invariably, returned to the unsuccessful suitor.—*Hallam, View of the State of Europe during the middle Ages*, ch. viii. p. 2.

7. Wholly. *Rare; provincial.*

Fineness. *s.* (two *n*'s.) Attribute suggested by Fine.

1. Elegance; beauty; delicacy.

Every thing was full of a choice *fineness*, that if it wanted any thing in majesty, it supplied with increase in pleasure: and if at the first it struck not admiration, it ravished with delight.—*Sir P. Sidney.*

As the French language has more *fineness* and smoothness at this time, so it had more compass, spirit, and force in Montaigne's days.—*Sir W. Temple.*

The softness of her sex, and the *fineness* of her genius, conspire to give her a very distinguishing character.—*Prior.*

2. Show; splendour; gaiety of appearance.

The *fineness* of clothes destroys the ease; it often helps men to pain, but can never rid them of any: the body may languish under the most splendid cover.—*Dr. H. More, Decay of Christian Piety.*

3. Subtility; artfulness; ingenuity.

It [the Directory] should have been composed with so much artifice and *fineness*, that it might have been to all the world an argument of their learning and excellency of spirit, if not of the goodness and integrity of their religion and purposes.—*Jeremy Taylor, Discourse on Extempore Prayer.*

4. Purity; freedom from dross or base mixtures.

I am doubtful whether men have sufficiently refined metals; as whether iron, brass, and tin be refined to the height; but when they come to such a *fineness* as serveth the ordinary use, they try no farther.—*Bacon, Natural and Experimental History.*

5. Smoothness; not coarseness.

Needwood . . .
Of Britain's forests all . . .
For *fineness* of her turf surpassing.

Finer. *s.* [from *fine, adj.*] One who purifies metals.

Take away the dross from the silver, and there shall come forth a vessel for the *finer*.—*Proverbs*, xxv. 4.

Finery. *s.* [from *fine, adj.*]

1. Show; splendour of appearance; gaiety of colours.

Dress up your houses and your images,
And put on all the city's *finery*,
To consecrate this day a festival. *Southern.*

The capacities of a lady are sometimes apt to fall short in cultivating cleanliness and *finery* together.—*Swift.*

2. Forge at iron-works.

The refinery of cast iron, or its conversion into bar-iron in England, . . . is naturally divided into three distinct parts. The first, or the *finery* properly so speaking, is executed in peculiar furnaces called running-out fires; the second operation completes the first, and is called puddling; and the third consists in welding several iron bars together, and working them under forge hammers, and between rolls. The *finery* furnaces are composed of brickwork about nine feet square, rising but a little above the surface of the ground.—*Ure, Dictionary of Arts, Manufactures, and Mines, Iron.*

Finespoken. *adj.* Using a number of fine phrases.

Finfooted. *adj.* Having feet with membranes between the toes: (Webfooted the *commoner* word). See Palmiped.

It is described like fissipedes, or birds which have their feet or claws divided; whereas it is palmipedous or *fin-footed*, like swans and geese, according to the method of nature in latirostrous or flat-billed birds; which being generally swimmers, the organ is wisely contrived unto the action, and they are framed with fins or oars upon their feet.—*Sir T. Browne.*

Finger. *s.* [A.S.]

By each at once her choppy *finger* laying
Upon her skinny lips. *Shakespear, Macbeth*, i. 3.

3. Instrument of work.

Fool, that forgetst her stubborn look
This softness from thy *finger* took. *Waller.*

4. Touch in music: (especially applied to *execution* on the *piano*).

For the performance of the 'Gettin' up Stairs,' I have no other name but that it was a stunner. First, Miss Wirt, with great deliberation, played the original and beautiful melody, cutting it as it were out of the instrument, and *firing off* each note so clear, and sharp, that I am sure Stripes must have heard it in the stable. 'What a *finger!*' cried Mrs. Ponto; and, indeed, it was a finger, as knotty as a turkey's drumstick, and splaying all over the piano.—*Thackeray, Book of Snobs*, ch. xxv.

The confounded instrument never stops: when the young ladies are at their lessons, Miss Wirt hammers away at those stunning variations, and keeps her magnificent *finger* in exercise.—*Ibid.* ch. xxvi.

Often used *adjectivally*, or as the *first element* of a *compound*. With *end*, a common combination, we have probably two words rather than a true compound.

On taking up and contemplating an apple, there arises in consciousness, partly by presentation through the senses, and partly by representation through the memory, what seems to be one state; but what analysis proves to be an extremely complex group of many states, combined after a special manner. The greater number of these remain to be considered analytically in subsequent chapters; and can here be simply enumerated. Among them we have primarily, the coexistence in time of the contemplating subject and the contemplated object; we have . . . that relative position of the two in space which we call proximity; that group of impressions on the *finger-ends*, in virtue of which we conceive the object as not only having a position in space, but as occupying space, and a certain limited amount of space; that more complex group of tactile and motor impressions gained by moving the *fingers* about it, and constituting our notion of its tangible form; that supplementary group of impressions by which we recognize its surface as smooth; and that yet other group by which we form an idea of its hardness.—*Herbert Spencer.*

Have anything at one's finger-ends. Be thoroughly familiar, or off-hand, with anything.

Finger. *v. a.*

1. Touch lightly; toy with.

Go, get you gone, and let the papers lie;
You would be *fingering* them to anger me.

2. Touch unseasonably or thievishly.

Up from my cabin,
My sea-gown scarf'd about me, in the dark
Grop'd I to find out them: had my desire;
Finger'd their packet; and, in fine, withdrew
To mine own room again; making so bold,
My fears forgetting manners, to unseal
Their grand commission. *Shakespear, Hamlet*, v. 2.

You would fain be *fingering*
This old sin-offering of two hundred, Tranio.
Beaumont and Fletcher, Tamer Tamed.

His ambition would needs be *fingering* the realm,
South, Sermons.

The children packed off (as it is supposed) to the nursery, but really only to the staircase, down which they slide during the dinner-time, waylaying the dishes as they come out, and *fingering* the round bumps on the jellies, and the forced-meat balls in the soup.—*Thackeray, Book of Snobs*, ch. xx.

Jemmy Ducks had his fiddle in his hand, holding it with the body downwards like a bass viol, for he always played it in that way, and he occasionally *fingered* the strings, pinching them as you do a guitar, so as to send the sound of it aft, that Mr

Vanslyperken might suppose that they were all met for mirth.—*Marryat, Snarleyyow*, vol. i. ch. v.

Finger-reading. *s.* Reading, for the blind, by means of letters of which the outline is thrown out in relief sufficiently strong to be felt.

Though we have no direct proof of analogous modifications in nervous structures; yet indirect proof is given by the greater efficiency that follows greater activity. This is manifested alike in the senses and the intellect. The palate may be cultivated into extreme sensitiveness, as in professional tea-tasters. An orchestral conductor gains, by continual practice, an unusually great ability to discriminate differences of sound. And in the *finger-reading* of the blind, we have evidence that the sense of touch may be brought by exercise to a far higher capability than is ordinary.—*Herbert Spencer, Inductions of Biology.*

Fingerboard. *s.* Board at the neck of a fiddle, guitar, or the like, where the fingers operate on the strings.

Mell, though he played far sweeter than Baltsar, yet Baltsar's hand was more quick, and could run it insensibly to the end of the *fingerboard*.—*Life of A. Wood*, p. 108.

1. One who puts an end to, completes, or accomplishes, anything.

D 15, 1+13: P 14: V 1+5: A 2+8: C 17.
And the mode of *fin-ray* notation employed is thus explained:—D, the dorsal fin, has, in the first fin, 15 rays, all spinous; in the second fin, 1 spinous plus 13 that are soft. P, pectoral fin, 14 rays, all soft. V, the ventral fin, with 1 spinous ray plus 5 that are soft. A, the anal fin, with 2 spinous rays plus 8 that are soft. C, the tail or caudal fin, 17 rays. He covered the floor of the house with planks of *fir*.—1 *Kings*, vi. 15.

It [the *fir*] is ever green: the leaves are single and for the most part produced on every side of the branches: the male flowers, or catkins, are placed at remote distances from the fruit on the same tree. The seeds are propagated on cones, which are squamose.—*Miller.*

[At first sight the English word *fir* does not look very like the Latin *quercus*, yet it is the same word. If

we trace *fir* back to Anglo-Saxon, we find it under the form *furh*. According to Grimm's law, *f* points to *p*, *h* to *k*, so that in Latin we should have to look for a word the consonantal skeleton of which might be represented as *p r c*. Guttural and labial tenues change; and as Anglo-Saxon *fif* points to *quinque*, so *furh* leads to Latin *quercus*, oak. In Old High German, *foraha* is *Pinus silvestris*; in Modern German *föhre* has the same meaning. But in a passage quoted from the Lombard laws of Rothar, *fereha*, evidently the same word, is mentioned as a name of oak (roborem aut quercum quod est *fereha*); and Grimm, in his dictionary of the German language, gives *fereh*, in the sense of oak, blood, life.—*Max Müller, Lectures on the Science of Language* (Second Series), lect. v. appendix.]

The other was decisive without words, and would give a shrug or an oath to express his opinion.—*Tatler*, no. 61.

6. Liveliness of imagination; vigour of fancy; intellectual activity; force of expression; spirit of sentiment.

Upon thy rev'rend head,

And warm the critick with a poet's *fire*. *Id.*

7. Passion of love; flame.

Love various hearts does variously inspire:
It stirs in gentle bosoms gentle *fire*,
Like that of incense on the altar laid;

With pride it mounts, and with revenge it glows.
Dryden.

With *set* and *on*; *on preceding*. Kindle; inflame.

Not set the Thames on fire. A person of whom it is said that 'he will *not set the Thames on fire*' (who *will* set it on fire is not suggested) is considered as dull, slow, stupid, or anything but overwise. When written, the word *Thames* is spelt with a capital *T*, and as if it were the name of the river. Such it is, doubtless, generally understood to be. The Great Fire of London, or the fairs held on the frozen river during certain severe winters, and the effect of certain combustibles that blaze on water, are for the most part, referred to as the original suggesters of the metaphor. Another explanation, however, suggested by a contributor to 'Notes and Queries' (March 25, 1865), makes *tems*, or *temse*, a common name meaning sieve or sifter. The bottom of a sieve, when made of wooden laths, canvass, or other similar materials, when corn or meal has passed through it for some time, and with more than ordinary friction, may certainly grow warm, and possibly catch fire; and when worked by hand, an extremely quick worker may be said to have set the sieve alight; a slow worker, on the other hand, being one who is in no danger of ever doing so. See Tammy.

St. Anthony's fire. In *Medicine*. Erysipelas.

Erysipelas, in the sense now explained, called in Scotland the rose, in this country *St. Anthony's fire*, resembles other disorders of the same group.—*Watson, Lectures on the Principles and Practice of Physic*, lect. lxxxix.

Fíredamp. *s.* See extract.

Flame requires a very high temperature for its existence; and consequently, if we can devise any mode of cooling it, it will be extinguished. A very small flame, for instance, is extinguished by bringing a large mass of metal near it, or by carefully surrounding it by a coil of wire. The metal abstracts the heat. . . . These . . . we owe to Sir H. Davy, who most ingeniously applied them in the construction of his miner's safety-lamp. Coal mines are often infested by a species of inflammable gas (carburetted hydrogen) known under the name of *firedamp*, which, mingled in certain proportions with atmospheric air, forms a mixture which explodes upon the contact of flame. . . . At length Davy constructed a lamp upon the principles explained. It is obvious that, if we place a lighted lamp or candle within a perfect cage of wire-gauze, no flame will be able to penetrate from within to the surrounding medium

in consequence of the cooling power of the metallic tissue.—*Brande, Manual of Chemistry*, p. 130.

1. In *Mineralogy*. Pyrites, of which it is an approximate translation. *Obsolete.*

The *firestone*, or pyrites, is a compound metallick fossil, composed of vitriol, sulphur, and an unmetallick earth, but in very different proportions in the several masses. The most common sort, which is used in medicine, is a greenish shapeless kind found in our clay-pits, out of which the green vitriol or copperas is procured. It has its name of pyrites, or *firestone*, from its giving fire on being struck against a steel much more freely than a flint will do; and all the sparks burn a longer time, and grow larger as they fall, the inflammable matter struck from off the stone burning itself out before the spark becomes extinguished.—*Sir J. Fl- (+ **b, g, s,** &c.) As this begins a series of decidedly onomatopoetic words, the following extract is given in full.

'*Flabby, Flap.*—The sound produced by the flapping of a loose broad surface is represented by the syllable *flab, flap, flag, flack, flad, flat*, varying, as usual in like cases, with the vowels *u* and *i*. Dutch *flabberen, fladderen*, to flap, flutter (Weiland); Platt Deutsch *fladdrig*, flaggy, fluttering; Dutch *flaggeren*, to flag, or hang loose (Kilian); German *fladdern, flattern, flackern*, to flap, flutter, flicker. From the first of the foregoing forms is English *flabby*, of such a nature as to give the sound *flab*, soft and limber, hanging loose. Dutch *flabbe*, a slap, a fly-flap, the flap of a wound; Platt Deutsch *flabbe*, a hanging lip. In like manner from the second form, a *flap* is any broad thin body hanging by one side so as to be able to give a blow with the flat surface, or a blow of such a nature. Then, as a loose, flapping condition is a sign of a want of elasticity, or of a faded condition in vegetable or animal structures, Provençal French *flappe*, faded, soft, rotten; *une poire flappe. Flappi et terni*, faded and tarnished. Italian *fiappo*, flappy, withered. (Florio.) *Flack, Flaccid, Flicker.*—The third and fourth of the forms mentioned in the preceding article give rise to a wide range of derivatives. French *flac*, onomatopée d'un coup qu'on donne sur un corps retentissant (Hécart); a slat, flap, slamp, or clap, given by a thing that is thrown against a wall or unto the ground, and the report made by hands struck one against the other; *flacquer*, to make a thing to flap or clap by casting it violently against the ground. (Cotgrave.) *Flack*, a blow, especially with something loose and pliant. (Forby.) To *flack*, to hang loose, to palpitate.

"Her cold breste began to heat,
Her herte also to *flacke* and beat."
(Gower.)

German *flacken*, to move to and fro, to flicker. To *flacker*, to flutter, quiver; to *flacket*, to flap about, to *flicker, fligger*, to flutter. (Halliwell.) Then signifying the quality of things which flap, French *flaque, flache*, Breton *flak*, Italian *fiacco*, weak, flaggy, drooping, faint; Latin *flaccere*, to be flaggy, flaccid, limber. From other modifications of the same radical image we have English *slack*, Latin *laxus* (= lak-s-us), loose, and with the nasal, *languere*, to flag, to be faint. *Flag* is one of the forms by which we represent the sound of a cloth flapping. Hence a *flag* is a portion of cloth fastened by one edge to a staff in order that it may be conspicuous as an ensign floating in the wind. Then, as Latin *flaccere*, to *flag*, to fall together, to droop, to become faint. The name of *flag*, Danish *flæg*, is given to several sorts of marsh and water plants with simple sword-shaped leaves. As the leaves are strong enough to stand upright of themselves, it cannot be from the notion of drooping. In most European languages the name is taken from a sword, German *schwertel*, Spanish *espadana*, Latin *gladiolus*, whence French *glaieul* (also called *couteau des moissons*), corn-flag, sword-grass. (Cotgrave.) There can be little doubt that the name of *flag* also is intended to mark the sword or flame-shaped figure of the leaves, probably from the wavy motion of flame or of a brandished sword. Danish *flagre*, to wave to and fro as flame; Spanish *flamear* (of sails), to shiver in the wind; French *flambe*, iris, water-flags; *flamberge*, a sword. The name of *flammula* is given to a ranunculus with spear or sword-shaped leaves. French *flammule*, spear-wort, or spear crowfoot. (Cotgrave.) Old Norse *flag-briosk* (*briosk*, gristle), cartilago ensiformis. In the dialect of Carinthia *flegge* is a lath. The syllable *flag* is used to represent other sudden noises, as a squall, blast of wind, or wind and rain, a flash of lightning; *flaw*, a blast of wind, sudden flash of fire, storm of snow. (Jamieson.) Swedish *flaga, vind-flaga*, a flaw of wind. (Widegren.) Dutch *vlaege*, a squall. (Kilian.) Again, applied to the sound of cracking or splitting, it gives Swedish *flaga*, a crack, breach, flaw; *flaga sig*, to scale off, fly off in scales; *flaga* (as French *éclat*, a splinter, from *éclater*, to crack), what separates in such a manner, the dross of iron driven off under the hammer, a *flake* of snow (provincially also called *flag*, Halliwell), the crust of a wound; *flagna af*, to separate in scales, to flake off. Hence must be explained Provincial Danish *flag, flav*, English *flag*, a turf or sod peeled off from the surface of the ground; Old Norse *flaga*, to cut turfs, and as a noun, a sod, chips, splinters. A *flagstone* is one that separates in layers or flakes. So Danish *flise*, to splinter, and as a noun, a flaw, a flagstone; Old Norse *flis*, a flake, a splinter; Swedish *snö-flisa*, a snow-flake. No doubt the designation of a piece or separate lump of anything may be derived from the sound of a blow in a different manner, viz. from the sound of a lump thrown on the ground, as Scotch *blaud* or *dawd*, English *dod*. So we have Bohemian *flak*, a blow, a good piece, a lump of meat or the like, and this perhaps may be the origin of Old Norse *flak*, a plank, a slice, English *fleaches*, the portions into which a log of timber is sawn up. (*Wedgwood, Dictionary of English Etymology.*)

The writers before Aristotle are censured by him for inaccuracy, in placing under the head of introductions, as properly belonging to them, many things which are not more appropriate in the beginning than elsewhere; as, e.g. the contrivances for exciting the hearer's attention; which, as he observes, is an improper arrangement; since, though such an introduction may sometimes be required, it is, generally speaking, anywhere else rather than in the beginning, that the attention is likely to *flag*.—*Whately, Elements of Rhetoric*, pt. i. ch. iv. § 1.

Prior.

Flag. *s.* In *Botany.* In ordinary language this word applies to the leaf of several plants rather than to any particular plant as a whole. The leaf of the Typhaceæ, for instance, is often called a flag; though, when the very characteristic head, or flower, appears, no one would call the plant anything but a bulrush. Again, the common yellow Iris is called *Cornflag*, rarely *flag*; whilst the Acorus Calamus is the *Sweetflag*.

Such is the case in common language. In systematic Botany, with the Linnean classification, *Flags* translates *Algæ*; and has a meaning not only much wider than the ordinary one, but one which is wholly different from it. It means both the fresh and salt water cryptogamic plants, the Algæ and Confervæ, not one of which is an ordinary flag, and many of which have nothing in common with the group. It is not impossible that, in this case, it may be a transformation of the word *Alga* itself.

Or drag him by the curls to a foul death.

Juice in language is somewhat less than blood; for if the words be but becoming and signifying, and the sense gentle, there is juice: but where that wanteth, the language is thin, *flagging*, poor, starved, scarce covering the bone, and shews like stones in a sack: some men, to avoid redundancy, run into that; and while they strive to hinder ill blood or juice, they lose their good.—*B. Jonson, Discoveries.*

It is most troublesome in the morning before breakfast, or during long fasting; or when an unusually protracted period has elapsed between meals. In such cases, the *flatus* often rises into the œsophagus, producing much uneasiness and often distress, owing to its excretion being prevented by the spasmodic constriction of the upper part of this tube, or by the descending ingesta; and in this way a very painful spasmodic dysphagia is often produced.—*Copland, Dictionary of Practical Medicine.*

3. Pass with a light irregular course: (perhaps mistaken for *fleet* or *flit*).

Floating visions make not deep impressions enough to leave in the mind clear, distinct, lasting ideas.—*Locke.*

[The meanings of *fleet* are very numerous, but they may probably all be derived from the notion of flowing water. Old High German *flinzan*, German *fliessen*, Old Norse *eg flyt, flaut, hefi flotid, at fliota*, to flow; Swedish *flyta*, Danish *flyde*, to flow, and also to float; *flyta med strömmen*, to swim with the stream; *gulvet flyder med vand*, the floor swims with water. Anglo-Saxon *fleotan*, fluctuare; Scotch, to *fleit, flete*, to flow, to float, and figuratively to abound. (Jamieson.) *Naviger*, to sail, to *fleete*. (Hollyband.) The same form appears as a noun in Old Norse *fliot*, a river; English *fleet*, a creek up which the tide flows.

In a figurative sense to *fleet* is to flow away, to escape, move rapidly away, whence the notion of transitory, swift, rapid.... The participial *fleeting* in the sense of what passes quickly away is very common. Italian *flusso*, transitory, fleeting (Florio); Old Norse *fliotr*, *fliotleyr*, English *fleet*, swift. The original image is the flapping movement of a resonant body, the representation of which is made to express also the wavering of a fluid surface. Platt Deutsch *flutt-tern*, *fluddern*, to flap, flutter, flicker; Bavarian *flodern*, to flutter, flicker; *fludern*, to flap, flutter, to make to flow, to float wood. . . . From the frequentative form in which the word seems earliest to have appeared was formed a root *flot*, *flod*, *plud*, signifying undulating movement. German *pluderhosen*, wide flapping breeches; Lithuanian *pludurauti*, to swim here and there, to drift; *pludas*, what swims on the surface, flowing; *pludis*, a raft; *pludili*, *plusti*, to float.... The Anglo-Saxon *flota*, a ship, Platt Deutsch *flote*, a raft, is essentially the same word with Old Norse *floti*, Danish *flaade*, French *flotte*, a fleet. The Old French *flote*, a crowd, may probably be from the notion of abundance, above pointed out as being expressed by English *fleet*. From the form of the root ending in a *d* instead of *t* we have Gothic *flodus*, Old Norse *flód*, Swedish *flod*, English *flood*, a flowing water, river, inundation, tide.... The change of *d* into *w* gives Anglo-Saxon *flowan*, *fleowan*, and English *flow*. Dutch *vloeden*, *vloeyen*, Platt Deutsch *flojen*, to flow. With these latter forms may be classed Bohemian *plowiti*, to swim, Polish *plawić*, to float, convey by water, to hover in the air; Russian *plavat'*, to swim, sail, navigate; *splavit'*, to float; *plavok*, the float of a net; Servian *plaviti*, to overflow, to skim milk; *plavitise*, to swim, to float with the stream. Again, we have Russian *pluit'*, *popluit'*, to swim, float, sail, flow; *pluitie*, swimming. Thus we are brought to Latin *fluere*, to flow, *fluvius*, a river, and Greek πλεω, to fluctuate, sail, swim, navigate, πλοιον, a ship. Some of the derivatives of Latin *fluo*, as the participle *fluxus*, and *fluctus*, wave, would indicate that the original root of the verb had a final *c*, instead of a *t* or *d* as in *float*, *flood*, but this is only another instance of that equivalence of labials, dentals, and gutturals in representing many kinds of natural sounds already exemplified under Flabby, where it was shown that the roots *flab*, *flag*, *flad*, or *flap*, *flack*, *flat*, are used with apparent indifference in expressing a flapping, flickering, fluttering action. The sense of shallow is probably derived from the notion of swimming on the surface, skimming the surface. Shallow is what keeps near the surface. So we have Bohemian *plauti*, to swim, flow, float; *pluti*, swimming, navigation; Polish *płyt*, a float or raft; Bohemian-Polish *płytki*, shallow. Platt Deutsch *flot*, shallow. On this supposition we must regard the resemblance to *flat* as accidental, though it must be confessed the words resemble each other both in sound and sense in a remarkable manner. French *plat* and Frisian *flaak* signify both flat and shallow; Dutch *vlack*, flat, *vlacke*, a shallow estuary; Swedish *flata i sjon*, a shallow in the sea. (Serenius.)—*Wedgwood, Dictionary of English Etymology.*]

Some botanists call bracts either the leaf from the axil of which a flower is developed, . . . or else all those leaves which are found upon the inflorescence, and are situated between the true leaves and the calyx. Others refuse the name of bract to any organs except such as are manifestly dissimilar to the ordinary foliage; and this is the common practice, mere leaves, to which flowers are axillary, being called *floral* leaves.—*Lindley, Introduction to Botany*, b. i. ch. ii. sect. 4.

The flowers or *florets* borne by the flower-head in its circumference are usually flat or ligulate, and different from those produced in its circumference. Those of the former station are called *florets* of the ray, and those of the latter *florets* of the disk.—*Lindley, Introduction to Botany*, b. i. ch. ii. sect. 4.

Floricúltural. *adj.* Appertaining to Floriculture.

A *floricultural* catalogue as copious as that which we have given of culinary plants and fruits would greatly exceed our limits. Plants grown for ornament are so numerous, that we cannot particularize separately the culture of each individual species, but, with the exception of some of the more choice sorts, as the *florists'* flowers, &c., must collect them into groups. . . . *Florists'* flowers are so called as being flowers either originated by *florists* by means of hybridisation or otherwise; or so improved by cultivation as to appear quite different from what the same flower was in its original state. . . . The Dutch were the first to bring this department of gardening into notice, and more particularly by the great excellence to which they arrived in the culture of *florists'* bulbs.—*Loudon, Encyclopædia of Gardening*, 5170-1.

Floricúlture. *s.* [Lat. *cultura* = cultivation.] See extract.

Whose speech you took, and gave it to a friend?
Pope.

Leo, no doubt, felt his strength; he could cope with the minds of the people, and make the pulpit what the rostrum had been of old. His sermons singularly contrast with the *florid*, desultory, and often imaginative and impassioned style of the Greek preachers. They are brief, simple, severe, without fancy, without metaphysic subtlety, without passion: it is the Roman censor animadverting with nervous majesty on the vices of the people; the Roman prætor dictating the law, and delivering with authority the doctrine of the faith.—*Milman, History of Latin Christianity*, ch. iv. b. ii.

The first letter which William unrolled seemed to contain only *florid* compliments: but a pan of charcoal was lighted: a liquor well known to the diplomatists of that age was applied to the paper: an unsavoury steam filled the closet; and lines full of grave meaning began to appear.—*Macaulay, History of England*, ch. xv.

You mistake the value of the *florens*, such as was used in Chaucer's tyme; whiche taking the name of the workemen, being Florentyners, were called *florens*; as sterlinge money took their name of Esterlinges, who refyned and coyned the silver in the tyme of kinge Henry the seconde.—*F. Thynne, Animadversions on Speght's Chaucer*.

I have the honour of employment from the king, in a piece of his delight; which doth so consort with the opportunity of my charge here, that it hath given me acquaintance with some excellent *florists*, as they are styled; and likewise with mine own disposition, who have ever thought the greatest pleasure to consist in the simplest ornaments and elegancies of nature.—*Sir H. Wotton, Letter to the Earl of Holderness*: 1623.

The female peasants of Lombardy generally wear clothes of homespun *floss-silk*. Of late years by improved processes pretty fine fabrics of this material have been produced both in England and France.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Flounce. *s.* [?]

1. Gesture indicating impatience; starting off from anything.

While thus I debated, in reverie centered,
An acquaintance, a friend as he called himself, entered;
An underbred free-spoken fellow was he,
Who smiled as he looked at the venison and me.
'What have we got here?—Why this is good eating!
Your own, I suppose, or is it in waiting?'
'Why, whose should it be?' replied I, with a *flounce*;
'I get these things often,' but that was a bounce;
'Some lords, my acquaintance, that settle the nation,
Are pleased to be kind—but I hate ostentation.'

Flounders will both thrive and breed in any pond.—*Mortimer, Husbandry.*

The *flounder* is one of the most common of the flatfish, and in the sea and near the mouths of large rivers all round our coast, being more particularly abundant where the bottom is soft, whether sand, clay, or mud. All the bays, creeks, and inlets of Orkney produce it, according to Mr. Low; and it is taken in abundance in different parts of Scotland, where it is called *fluke* and Mayock *fluke*—a term having reference to the flattened form of the fish. It is common at Berwick and Yarmouth, at which latter place it is called a butt—a northern term; and those *flounders* that are caught in the extensive backwaters behind Yarmouth, where there is a considerable deposit of mud, are in consequence so dark in colour as to be distinguished from the lighter-coloured ones caught on the sands of the sea by the name of black-butts. This similarity in colour between certain fishes and the bottom upon which they are found has been already referred to as affording security to the defenceless from the attacks of their enemies, and exhibits a beautiful instance of the design employed for the preservation of species.—*Yarrell, British Fishes.*

Floúnder. *v. n.* [Dutch, *flodderen.*] Struggle with violent and irregular motions: (as a *horse* in the *mire*).

Flúky. *adj.* Furnished with a fluke or flukes.

No loud-mouthed voices call with harsh command,
To heave the *flooky* anchors from the sand.
Rowe, Translation of Lucan's Pharsalia, b. iii. (Rich.)

Flúmmery. *s.* [German, *pflaumerei*, from *pflaum* = plum.] The ordinary derivation is from the Welsh, *llymry*, described as fermented and subacid oatmeal, and either the same as, or closely allied to, the Irish and Scotch sowins. If the exact nature of the true English dish were known, the question of origin would be simplified; but the import of the word is not uniform. In Miss Acton's work, the only notice of it is 'Jaumange, or jaune manger, sometimes called Dutch *flummery*;' and jaune manger is the viand to which the editor has oftenest heard the word *flummery* (simply, i.e. without the prefix *Dutch*) applied. There are no *plums* (as suggested by *pflaumerei*) in this, but neither are there oats (as in *llymry*). Meanwhile, the dish is more like the cheese (as damson cheese) of a green or yellow plum than anything else, and it is suggested that this was the original dish; also that it was a German one, a view of which the word *Dutch* improves the probability.

Milk and *flummery* are very fit for children.—*Locke.*

Flúmmery. *s.* [? *flam*.] Nonsense.

I tell you, madame, 'tis all *flummery*.—*Fielding, Tom Thumb.*

I tell you I don't. I only love to hear men's arguments, and I hate their *flummery*.—What do you call *flummery*?—Flattery, you blockhead! a dish too often served up by a paltry poor man to paltry rich ones.—*Colman the younger, The poor Gentleman*, iii. 1.

Flúnky. *s.* Livery servant: (sometimes the word refers to the gorgeousness of dress of the more magnificent kind of footman, and sometimes to servility of manner).

I don't frequent operas and parties in London like you young *flunkies* of the aristocracy.—*Thackeray, The Newcomes*, ii. 49.

Suddenly, in the midst of their pride, a little bell was rung, a side door opened, and (after setting down their royal mistress) her Majesty's own crimson-footmen, with epaulettes and black plushes, came in. It was pitiable to see the other poor Johns slink off at this arrival! Not one of the honest private plushes could stand before the royal *flunkies*. They left the walk; they sneaked into dark holes, and drank their beer in silence. The royal plush kept possession of the garden until the royal plush dinner was announced, when it retired, and we heard from the pavilion where they dined conservative cheers, and speeches, and Kentish fires. The other *flunkies* we never saw more. My dear *flunkies*, so absurdly conceited at one moment, and so abject at the next, are but the types of their masters in this world.—*Id., Book of Snobs*, ch. ii.

Flúor. *s.* [Lat.] Fluid state.

Flúor [spar.] See extract, and next entry.

Fluor-spar seems subordinate to metallic veins; as to those of lead in Derbyshire; of tin, in Saxony and Bohemia; but it is found also in masses or veins, either in crystalline rocks, associated with quartz, heavy spar, &c.; as in Auvergne, Forez, Vosges, Norberg, in Sweden; Norway; Petersburg; near Hall; Gourock, in Scotland, &c.: or among secondary limestones, slates, and sandstones, in Derbyshire, Cumberland, Cornwall, and New Jersey. It exists also in the amygdaloids of Scotland, and in the volcanic products of Monte Somma at Vesuvius. The variously-coloured specimens called Derbyshire spar are worked upon the turning lathe into vases and other ornamental objects.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Flúorine. *s.* In *Chemistry*. Elementary substance, belonging to the same class as chlorine, iodine, and bromine.

Fluorine has not hitherto been isolated, for its powers of combination are such, that nothing has been found capable of resisting its action. It is found as a component of a few minerals only; one of these, however, commonly called *fluor*-spar, is very abundant; it is a compound of *fluor* and calcium, or a *fluoride* of calcium. *Fluorine* has also been detected in some varieties of bone, and in the enamel of the teeth.—*Brande, Chemistry*, p. 295.

The valley of the Ouze, between Newhaven and Lewes, is one of the several estuaries from which the sea has retired within the last seven or eight centuries; and here, as appears from the researches of Dr. Mantell, strata thirty feet and upwards in thickness have accumulated. At the top ... is a bed of peat. ... Next below is a stratum of blue clay, containing freshwater shells of about nine species, such as now inhabit the district. ... Lower down, the layers of blue clay contain, with the above-mentioned freshwater shells, several marine species well known on our coasts. In the lowest beds, often at the depth of thirty-six feet, these marine testacea occur with-

out the slightest mixture of *fluviatile* species, and amongst them the skull of the narwal or sea-unicorn has been detected. Underneath all these deposits is a bed of pipe-clay derived from the subjacent chalk.—*Sir C. Lyell, Principles of Geology*, ch. xlix.

   A penetration into the abstruse difficulties and depths of modern algebra and *fluxions*, are not worth the labour of those who design the learned professions as the business of life.—*Watts.*
   Foreigners usually define the method of *fluxions* as the arithmetic, or analysis, of infinitely, or rather indefinitely, small variable quantities. . . . Sir I. Newton, and, after him, the English authors, call these infinitely small quantities moments, considering them as the momentary increments or decrements of variable quantities; e.g. of a line considered as generated by the flux of a point, or of a surface generated by the flux of a line. Accordingly, the variable quantities are called fluent or flowing quantities; and the method of finding either the *fluxion*, or the *fluent*, the method of *fluxions*. M. Leibnitz considers the same infinitely small quantities as the differences, or differentials, of two quantities; and calls the method of finding these differences the differential calculus. . . . Flowing quantities, i. e. such as, in the genesis of figures by local motion, are continually increasing and diminishing, are certainly very properly denominated *fluents*; and as all figures may be conceived as so generated, the infinitely small increments or decrements of such quantities are very naturally denominated *fluxions*. Besides this difference in the name, there is another in the notation. . . . Setting aside these circumstances, the two methods are the same.—*Rees, Cyclopædia.*

This would discourage any man from doing you good, when you will either neglect him, or *fly in his face*, and he must expect only danger to himself.—*Swift, Drapier's Letters.*

Fly low. Keep quiet, so as to escape observation; comport one's self unostentatiously and unambitiously: (as the *second element* in a *compound*, *highflier*, *highflying*, the word conveys the opposite meaning).
Young General Egalité, it would seem, shone brave among the bravest on this occasion. Doubtless a brave Egalité,—whom however does not Dumouriez rather talk of oftener than need were? The mother-society has her own thoughts. As for the elder Egalité he *flies low* at this time; appears in the Convention for some half-hour daily, with rubicund, preoccupied or impassive quasi-contemptuous countenance; and then takes himself away.—*Carlyle, French Revolution*, pt. iii. b. ii. ch. iv.

Let fly. Discharge.
The noisy culverin, o'ercharged, *lets fly*,
And bursts, unaiming, in the rended sky.
Granville.

Fly and *flee* are, as far as origin goes, the same words; and the former, when taken generally, and with the *wing* as an instrument or organ of *flight* kept out of view, may be used, as has been seen, for the latter. In *flight*, the convertibility of the two notions is clearer still. It may mean *flying* as a bird, or *running away* as a routed regiment, indifferently. With the verb, however, there are two points of difference. (1) *Flee* cannot be used for *fly* (with wings) to the same extent that *fly* can be used for *flee*. (2) The *preterites* and *past participles* of the two verbs are different, *fled* being proper to *flee*, and *flew* and *flown* to *fly*; and these forms are *not* interchangeable. The confusion between *flowed* from *flow*, and *flown* from *fly*, as when we say, 'the meadow was *overflown* (*overflowed*) with water,' is wholly inaccurate. The fact, however, of its being

occasionally used shows that a tendency to confusion has begun.

Fly. *v. a.*

And if so, the queen and the lord mayor may be brought in time to see the wastefulness of state coaches, in an age when a private brougham would answer all requirements, and when an American president finds it possible to discharge all his state duties by means of two post-horses and a *fly*.—*Saturday Review*, February 10, 1866.
5. In *Mechanics.* See extract.
   Fly, in mechanics, is an apparatus employed to equalize and regulate the velocity and power of many machines which require such regulation from the inequality either of the moving power, or of the resistance it has to overcome. A *fly* acts upon the principle that any body being put in motion with a certain velocity at a certain expense of power, will continue to move until its motion is stopped by a resistance equal to its momentum or sum of the power and velocity which first caused its motion. This principle is carried into effect by various forms of the apparatus; the mass being generally made to revolve upon a centre, and the parts on the opposite sides of the centre being balanced. Two, four, or any number of equal weights, placed on the opposite ends of the arms or radii which are affixed to an axis, constitute a *fly*. If the weights be supposed to touch each other, or a hoop or ring of one piece be substituted, its form will be much improved; and it is now termed a *fly-wheel*, and is the manner in which the *fly* is most generally used.—*Rees, Cyclopædia.*

O., at Mr. Brown's;' and she confides the card to the gentleman of the Fine Art Repository, who consents to allow it to lie upon the counter, where it grows dingy and *flyblown.—Thackeray, Vanity Fair.*

   There was more need of Brutus in Domitian's days, to mend, than of Horace, to laugh at a *flycatcher.—Dryden.*
2. Native bird (of passage) so called, of the genus Muscicapa.
   Mr. White observes that the *flycatcher*, of all our summer birds, is the most mute and the most familiar. It visits this island in the spring, and disappears in September; it builds in a vine or sweetbriar, against the wall of a house, or on the end of a beam, and sometimes close to the post of a door, where people are going in and out all day long; it returns to the same place year after year; the female lays four or five eggs, marked with small rusty spots; the nest is carelessly made, and consists chiefly of moss, frequently mixed with wool and strong fibres, 'so large,' says Buffon, 'that it appears surprising how so small an artificer could make use of such stubborn materials.' This bird feeds on insects, which it catches on the wing; it sometimes watches for its prey, sitting on a branch or post, and, with a sudden spring, takes it as it flies, and immediately returns to its station to wait for more; it is likewise fond of cherries. Mr. Latham says it is known in Kent by the name of the cherry-sucker. It has no song, but only a sort of inward wailing note, when it perceives any danger to itself or young. It breeds only once, and retires early. When its young are able to fly, it retires with them to the woods, where it sports with them among the higher branches, sinking and rising often perpendicularly among the flies which hum below.—*Bewick, History of British Birds*, i. 196.
3. Model (often of a *bird*) in wax, or something of the same sort, that attracted flies from furniture; diversion.

   To save the *fliers* than to win the field. *Waller.*
2. One who, or that which, flies as with wings: (often the *second element* in a compound, as Highflyer. In the following extract the elements are separated).

Flýing. *part. adj.* [illegible] supposed to have, the speed of that which flies: (as, the '*Flying* Post,' '*flying* artillery').

Flying-fish. *s.* Fish so called, of the genus Exocœtus.
The greatest recreation we had, was to view such large shoals of *flying-fishes*, as, by their interposing multitude, for some time darkened the sun; a fish beautiful in its eye; the body, though no larger than a small herring, yet big enough for those complemental fins, which, so long as moist, serve as wings; to fly 200 paces or more, and 40 foot high.—*Sir T. Herbert, Relation of some Years' Travels into Africa and the Great Asia*, p. 39.
Several instances being on record of a species of *flying fish* having been either captured or seen at different parts of our coast, the subject requires to be noticed here: although the exact species, or even whether more than one species may not have occurred, has not as yet been positively decided. Pennant states that in June 1765, one was caught at a small distance below Carmarthen, in the river Towy, being brought up by the tide, which flows as far as the town.—*Yarrell, British Fishes.*

The lines to the meeting of which it generally applies are chiefly *rays*, i.e. mathematical *radii*, or *rays* of either light or heat. The latter gives the meaning nearest to its original import, i.e. a point whereon *fire* is concentrated, as in burning-glasses.

2. In *Geometry.* See Hyperbola and Parabola.

3. It often means the distance between the point of convergence and meeting, rather than the point of meeting itself; this use being common where the machinery for obtaining a *focus* is imperfect, and the *focus* itself only approximate. Here, a wrong *focus*, a bad *focus*, means a wrong distance or adjustment.

The proximate cause [of nearsightedness] is the adunation of the rays of light in a *focus* before the retina.—*Hooper, Medical Dictionary, Myopia.*

Fógger. *s.* [as a current word in the present English, this exists only in the compound *pettifogger.* That it is possibly a word of *direct* Norse origin, is suggested by the word *foged*, in import nearly equivalent to *baillie* in Scotland, and in origin a transformation of the Latin *advocatus.* On the other hand, Wedgwood, from whom the notice of *fog* is taken, connects it with *fudge* [*fadge*], and the German *fügen* = suit; in the extract, however, it may be merely a derivative of *fog.*] Pettifogger.

After studying the crystalline rocks of South America, Mr. Darwin proposed the term *foliation* for the laminæ or plates into which gneiss, mica-schist, and other crystalline rocks are divided. As the word is essentially collective, the use of it in the plural is excusably considered as vulgar. Its use, however, as applied to two *collections*, is legitimate. *Peoples* is getting used in this way.

'Let the *peoples* spin for ever down the ringing grooves of time.' (Tennyson, Locksley Hall.)

Peoples, however, as *populations*, is likely to become a current plural before *folks*, from a more essentially collective word. It may mean, for instance, *nationalities*, or *popular bodies*, which *folk* is not likely to do.

Old good man Dobson of the green
Remembers he the trees has seen,

Sometimes it is spelt as two words, sometimes as *folkslore*. How the first element is pronounced is another question; generally, perhaps, with the *l* in *folk* sounded, rather than as *foak*. It is oftener used as the heading of a notice than in the context of influential writers.] System of popular legends, traditions, or superstitions.

That all the peculiar and popular observances of our ancestors and our peasantry, which are now (1852) classed under the Teutonic appellation of *folkslore* (*volkslehre*) should have been originally brought from the countries of these Teutons . . . appears so natural that few will object and fewer still deny.—*Dr. W. Bell, Shakespeare's Puck and his Folkslore.*

For. *prep.* Word for word, this is the Latin *pro*, the letter-change between words beginning with *p* in Latin and *f* in English giving us one of the most generally recognized rules in English philology; *fish* = *piscis*, *fell* = *pellis*, &c., being similar examples of it. In meaning there is a similar correspondence. Thirdly, the relations between *for* and *fore* are, to a great extent, parallel with those between *pro* and *præ*; the latter meaning *before*, especially in composition. Hence, the two forms may, up to a certain point, be conveniently considered together. For further remarks, see Former and Further. It is difficult to say in what particular action the practice of treating an object that stood before another as an equivalent to it originated; and this is because the actions that might suggest it are numerous. To choose, as an illustration, only one of them—the man that in a contest steps forward *in front of* one of his fellows is likely to both give and take blows, glory, death, or any other of the fruits of fighting, *in his stead*; and where, by so doing, he serves the purpose intended equally well, he is not only a substitute but an equivalent. This view, perhaps, gives us the best key to the numerous details connected with its use. In considering, however, the several shades of meaning deducible from this notion of *fore*-ness, we must, as with most other particles, be careful to attribute the import of the combination to the right part of it. The following extracts, for instance, are arranged, in the previous editions, under a separate heading, i.e. *Notwithstanding*.

This, *for* anything we know to the contrary, might be the self-same form which Philojudæus expresseth.—*Hooker, Ecclesiastical Polity.*

God's desertion shall, *for* ought he knows, the next minute supervene.—*Dr. H. More, Decay of Christian Piety.*

Probability supposes that a thing may or may not be so, *for* any thing yet certainly determined on either side.—*South, Sermons.*

For anything that legally appears to the contrary, it may be a contrivance to fright us.—*Swift, The Drapier's Letters.*

If such vast masses of matter had been situated nearer to the sun, or to each other, as they might as easily have been, *for* any mechanical or fortuitous agent, they must necessarily have caused a considerable disorder in the whole system.—*Bentley.*

It is clear, however, that taken by itself the word *for* has only its ordinary import; the equivalent to *notwithstanding* lying in the words which follow, the form of which, even when it does not contain the words *to the contrary*, always suggests them. In short, it suggests an objection; one, however, which is pronounced insufficient; or one to which the counter-statement is, at least, deemed an equivalent.

2. From the notions connected with equality the derivative meanings are numerous; that of cause (viewed in respect to its adequacy in relation to its effect) being one of them. And, as this is the case with the so-called final as well as the efficient causes, the word *for* finds a place in propositions which convey the notion of aims or intentions, of things aimed at, or of results intended.

From the frequency of its combination with a second word of which the Latin character is evident, *foramen* is but imperfectly naturalized. Hence, it is entered rather on the strength of its derivatives, some of which, however, are in the same predicament, rather than as a truly Anglicized word).

Foráminífera. *s.* [Lat. *fero* = bear, carry.] In *Zoology*. Term, imperfectly naturalized, applied to a class of the most simply organized members of the animal kingdom, the majority of which have a shelly envelope provided with small perforations or foramina. They form a division of the larger class Rhizopoda, or Rhizopods, with which, when first applied, the term Foraminifera was co-extensive. Its import has since been limited. *Foraminiferous*, and *foraminated*, are adjectives applied to their organization.

This term [Rhizopoda], first proposed by M. Dujardin, has been adopted as much more appropriate than that of Polythalamia or *Foraminifera*, which are only applicable to part of the class.... 6. In *Physics.* Cause of cha…
It is . . . not difficult to lead a … lative habit of thought to see … which constantly take place i… bodies when left to themselv… effect of extraneous *forces* wi… city. . . . Every change in the velocity … body must have a cause; and if the ob… any manner, be referred to the presen… bodies, these are said to exert *force* upon th… body: and the conception of *force* is thus evo… from the general idea of cause. *Force* is any cau… which has motion, or change of motion, for its effect; and thus, all the change of velocity of a body which can be referred to extraneous bodies,—as the air which surrounds it, or the support on which it rests,—is considered as the effect of *forces*. . . . Gravity is a uniform accelerating *force*; such a uniform *force* having this for its character, that it makes the velocity increase in exact proportion to the time of motion. The relation which the spaces described by the body bear to the times in which they are described, is obtained by mathematical deduction from this definition of the *force*. . . . The clear definition of a uniform accelerating force, and the proposition that gravity is such a *force*, were co-ordinate and contemporary steps in this discovery. In defining accelerating *force*, reference, tacit or express, was necessarily made to the second of the general axioms respecting causation,—that causes are measured by their effects. *Force*, in the cases now under our notice, is conceived to be, as we have already stated, any cause which, acting from without, changes the motion of a body. It must, therefore, in this acceptation, be measured by the magnitude of the changes which are produced. But in what manner the changes of motion are to be employed as the measures of *force*, is learnt from observation of the facts which we see taking place in the world. . . . *Force*, motion, momentum, are terms which were employed, though in a loose manner, from the very outset of mechanical speculation. And so long as these words retained the vagueness of common language, it would have been a useless and barren truism to say that 'the momentum is proportional to the *force*,' or that 'a body loses as much motion as it communicates to another.' But when 'momentum' and 'quantity of motion' are defined to mean the product of mass and velocity, these two propositions immediately become distinct statements of the third law of motion and its consequences. In like manner, the assertion that 'gravity is a uniform *force*' was assented to, before it was settled what a uniform *force* was; but this assertion only became significant and useful when that point had been properly determined.—*Whewell, History of Scientific Ideas,* ch. vii.
Speaking with reference to physical phenomena, it is difficult to separate the idea of causation from that of *force*; and these have been regarded as identical by some philosophers. . . . If, again, adopting the view which looks to causation as a *force*, we could say that water could be caused to flow only by gravitation, we might say abstractedly that gravitation was the cause of water flowing—but this we cannot say; and if we seek and examine any other example, we shall find that causation is only predicable of it in the particular case, and cannot be supported as an abstract proposition; yet this is constantly attempted.—*Grove, Correlation of Physical Forces,* p. 10.

Fore. *adj.* [See For. *Fore* is far less common as a separate word than as an *element* in a *compound*: either as the *second*, as in *be-fore*; or as the *first*, as in the numerous words of the forthcoming entries. With some of these the accent varies, so that what one speaker pronounces as a compound another may utter as two words. In a few instances the meaning is equivocal; it being doubtful whether the element be *fore* or *for*. Thus in the 'Induction to the Mirrour for Magistrates,' we find the words '*forehewed* with wounds.' Taken by itself, this is much more likely to mean simply *cut-up, cut-about, cut-to-pieces*, than either *cut in front*, or *cut beforehand*. But the spelling favours *fore*. This, however, may be faulty. Yet the context favours the spelling being 'his *face forehewed* with wounds.' Yet even here *cut about* or *mangled* is the better sense; the fact of the wounds having been received in front being sufficiently indicated by *face*.

The compounds of *fore* fall into two natural and well-marked classes when it denotes an action, i.e. when the result is a verb, the meaning may almost always be got at by rendering *fore* by *beforehand*, and transposing the elements, as *fore-see, see beforehand*. Here the *beforeness* is priority in *time*. What applies, in this respect, to verbs, applies also to substantives derived from them, as *foreboder, foreboding*, &c. With substantives *not derived from verbs*, the *beforeness* is anteriority in *space*, and *fore* is adequately rendered by *in front* or *fore part of*. Upon this difference we may found a rule of considerable generality for the accent. When *fore* = in front, gives a substantive as its compound, it is accented; when it means beforehand and gives a verb, it is not.

Such is the rule. It is one, however, which very slight shades of meaning traverse. Though no one says anything but *fórehead* and *forebóde*, such a word as *forecast* in the sense of *forethought* is pronounced in two ways (*fórecast* and *forecást*). This is because there are two conflicting rules. The substantive, as compared with the verb, should stand in the way of accent as 'a *súrvey*' does to 'I *survéy*.' Such a substantive, however, is by no means one of the character of *fórehead* or *fóreman*. As compared with these it is wellnigh a verb.

Another meaning of *fore* is one which it takes when followed by a past participle, as in *fore-cited, fore-said*, where it = *above* as an element in similar compounds. They are chiefly used in reference to something contained in an earlier part of the work or speech in which they appear, and are connected with the notion of *order* or *arrangement*. They can, of course, be invested with the form of a verb by cutting off the final consonant, by which means *fore-cited fore-quoted*, &c. give *fore-cite, fore-quote*. The existence, however, of such verbs as these is only formal; where they exist at all they exist with a different meaning. A passage or statement referred to as one that has gone *before*, must necessarily be referred to by a past or preterite form. Words, then, like *fore-cited*, are participles with the word *fore* prefixed, and in many cases, perhaps in all, two words rather than a compound. Here, also, the accent is variable. So it is in another class of compounds, i.e. that wherein *fore* is simply *tautological*, as in *forefront*. Finally, when the compound exceeds two syllables, there is unsteadiness. This, however, arises from the form of the word rather than its meaning; dissyllables being, as a general rule, held together as compounds more firmly than longer and more complex combinations. Upon the whole it is probable that most of the combinations in which *fore* is a prefix give two words rather than a compound; the only *class* of true and undoubted compounds being that of which *forehead* and *foreman* are examples—i.e. the class wherein *fore* relates to place, and the word which follows it is a substantive. And it may be remarked that herein further change is going on; the *fore* being in many words pronounced *for*, at the risk of creating confusion. See Forefather, Forswear, and the Preface.

Fóremost. *adj.* [If we simply look to the words *fore* and *most*, there is nothing anomalous in *fore-most*, thus spelt and thus divided. If, however, we also take cognizance of *former*, complications arise. There is no *e* in the first syllable of *former.* Without an *e* few spell *foremost. Foremost*, however, and *formost* are in origin different words. Occasionally, indeed, they are distinguished in *speaking* In *spelling*, however, *foremost* has prevailed; nor is it the intention of the present editor to unsettle the existing orthography by a separate entry of *formost*; the difference of import between the two words being of the slightest. Still, the difference of origin is worth notice.
   Foremost is simply what the first view suggests, *fore* + *most.*
   Formost is the A.S. *forma* + *st*, the ordinary sign of the superlative degree.
   It may be added that *forma* is by no means the only word of its class. For further remarks see Former, and also Further, Fore, and For.

The forum was a publick place in Rome, where lawyers and orators made their speeches before the proper judges in matters of property, or in criminal cases: thence all sorts of disputations in courts of justice, where several persons make their distinct speeches, may come under the name of *forensick* disputes.—*Watts, Improvement of the Mind.*

The legal learning of Mackenzie was not profound: but, as a scholar, a wit, and an orator, he stood high in the opinion of his countrymen; and his renown had spread even to the coffeehouses of London and to the cloisters of Oxford. The remains of his *forensic* speeches prove him to have been a man of parts, but are somewhat disfigured by what he doubtless considered as Ciceronian graces, interjections which show more art than passion, and elaborate amplifications, in which epithet rises above epithet in wearisome climax.—*Macaulay, History of England,* ch. vi.

2. In *Law.*

The manner of making *forests* is this: the king sends out his commission, directed to certain persons, for viewing, perambulating, and bounding the place that he has a mind to afforest: which returned into Chancery, proclamation is made, that none shall hunt any wild beasts within that precinct, without licence; after which he appoints ordinances, laws, and officers for the preservation of the vert and venison; and this becomes a *forest* by matter of record. The properties of a *forest* are these: a *forest*, as it is strictly taken, cannot be in the hands of any but the king, who hath power to grant commission to a justice in eyre for the *forest*; the courts; the officers for preserving the vert and venison, as the justices of the *forest*, the warden or keeper, the verders, the foresters, agistors, regarders, bailiffs, and beadles. The chief property of a *forest* is the swainmote, which is no less incident to it than the court of pyepowders to a fair.—*Cowell.*

By the close and scrutinizing attention of minds the most persevering and careful, it was ascertained that even the distant stars were subject to this law; and, at last, to place as it were the seal of assurance to its never-failing truth, it became, in the minds of Leverrier and Adams, the *foreteller* and the discoverer of an orb rolling in the depths of space, so large as to equal nearly sixty earths, yet so far away as to be invisible to the unassisted eye.—*Faraday, Lecture on Mental Education.*

2. In *Law.* As an approximate translation of the N.Fr. *prepense* (= thought beforehand; *penser* = think), it means previous planning; preparatory contrivance; intention; being usually combined with *malice*, or some equivalent term. Hence, its character is often, in appearance, adjectival: e.g.

The second is, where a man is slain upon *forethought* malice, which the law terms murther.—*Bacon, Charge at the Sessions of the Verge.*

Only, however, in appearance; the true form being *malice on forethought* (*malice prepense*), changed into *a-forethought*, and, less correctly, into *of-forethought*.

He that is undone, is equally undone, whether it be by spitefulness of *forethought*, or by the folly of oversight, or evil counsel.—*Sir R. L'Estrange.*

The jury, however, found him guilty, and represented by their *forewoman* that such discourses were apt to sully the imagination; and that by a concatenation of ideas, the word linen implied many things that were not proper to be stirred up in the mind of a woman who was of the prosecutor's quality, and therefore gave it as their verdict that the linendraper should lose his tongue.—*Ibid.* no. 259. (Ord MS.)

2. Thing forfeited.

Ancient privileges and acts of grace indulged by former kings, must not, without high reason, be revoked by their successors; nor *forfeitures* be exacted violently, nor penal laws urged rigorously.—*Jeremy Taylor, Rule and Exercises of Holy Living.*

The next branch of the king's ordinary revenue consists in *forfeitures* of lands and goods for offences; bona confiscata, as they are called by the civilians, because they belong to the fiscus or imperial treasury; or, as our lawyers term them, forisfacta; that is such whereof the property is gone away or departed from the owner.—*Sir W. Destroying them for wealth.
Shakespear, Macbeth, iv. 3.

Fórger. *s.* One who forges.

1. As a *maker* in general.

Fórgery. *s.*

1. Crime of falsification.

A *forgery*, in setting a false name to a writing, which may prejudice another's fortune, the law punishes with the loss of ears; but has inflicted no adequate penalty for doing the same thing in print, though books sold under a false name are so many *forgeries*.—*Swift.*

Forgery, or the crimen falsi, is an offence which was punished by the civil law with deportation or banishment, and sometimes with death. It may, with us, be defined (at common law) to be 'the fraudulent making or alteration of a writing to the prejudice of another man's right;' for which the offender may suffer fine, imprisonment, and pillory. And also by a variety of statutes, a more severe punishment is inflicted on the offender in many particular cases, which are so multiplied of late as almost to become general.—*Sir W. Blackstone, Commentaries on the Laws of England*, b. iv. ch. xvii. 3.

2. Smith's work.

[He] ran on embattled armies clad in iron:
And, weaponless himself,
Made arms ridiculous, useless the *forgery*

Adamantean proof. *Milton, Samson Agonistes*, 129.

Forget-me-not. *s.* Native plant so called, Myosotis palustris.

[The extract from Dr. A. Prior, which, lengthy as it is, gives only a part of his criticism, should be read first. Except so far as he cautions the reader against interpreting too liberally the words, 'all other botanical authors,' the editor takes no important exceptions to the doctrine laid down in it. That no botanical author, till within the last forty years, applies the name *Forget-me-not* to the Myosotis palustris, is only correct in respect to *English* authors, and in respect to the word itself in the *English form*. In the edition of Nemnich, of 1773, to go no further, the German *Vergissmeinnicht*, the Danish *forglemm mig ej*, and the Russian *nezabud myena* (all with the same meaning as the English combination) are to be found, and in each case it is the Myosotis to which they are attached. On the other hand, the term is given *nowhere else*. The English for the Myosotis of Nemnich is the old term, *Mouse-ear scorpion-grass*; and the English for both the Ajuga Chamæpitys and the Veronica Chamædrys is *not* Forget-me-not. In other words, the combination is ignored altogether as an English name. Nor does this arise from carelessness. Over and above the ordinary entries, Nemnich adds a note upon the beauty of the plant and the popularity of the name. He evidently thinks it so truly and decidedly the proper appellation for the Myosotis, as not to recognize it with any other sense; for he certainly knew how Gerard named the Ajuga, even if he were ignorant of what certain other English herbalists called the Veronica. Hence, if the true application of the word be to this lastnamed flower, the Danish, German, and Russian synonyms are exceptional. As exceptions, however, they are important. Neither do they seem to be of recent origin. Add to this that the sentimental element appears in some of its other synonyms: '*Je länger je lieber*' (the longer the dearer) in German; *Jomfriesfoloye* and *Stoltig Henrik* in Norse. The same languages also illustrate the unsteadiness of import, viz. to the Euphrasia (Eyebright), and the Anagallis aquatica (Veronica Anagallis).

Upon the whole, however, the main facts, over and above priority of application, point towards the Veronica. A flower with a proper name, and that a female one, lends itself to sentiment better than a flower with a common one. Flowers, too, that characterize the month of May do the same. Thirdly, the different applications are most easily deduced by taking the Veronica as the starting point—the *Veronica Chamædrys*. As the latter, it might extend to the Teucriums—Teucrium *Chamædrys*, and Teucrium Scorodonia = *Germander*; as the former, to the *Veronica* Anagallis and (see below) Beccabunga. See Germander, Veronica.

The editor, who knew the *Forget-me-not* some forty-five years back, knew it only as a Veronica, and thinks such is the case with his contemporaries in general. The story to the effect that a young lady wanted a plant growing on the edge of an island, that her lover swam for it, and that he sank just as, giving her the flowers, he uttered the sentiment, is given by Mills in his 'History of Chivalry'; not, however, in the main text, but in a note, and as a communication from Dr. A. Thompson, but without any special evidence that the flower thus immortalized was the Myosotis. The Brooklime (suggested by the *Anagallis aquatica*, and a Veronica) may have been the flower. At any rate, the *English* application of the word to the Myosotis is both recent in origin, and doubtful in respect to propriety.]

Forget-me-not [is] a name that for about forty years has been assigned to a well-known blue flower, a Myosotis, but which for more than two hundred years, had in this country, France, and the Netherlands, been given to a very different plant, the ground-pine, Ajuga Chamæpitys, on account, as was said, of the nauseous taste that it leaves in the mouth. It is to this plant exclusively that we find it assigned by Lyte, Lobel, Gerarde, Parkinson, and all our herbalists from the middle of the fifteenth century; and by all other botanical authors who mention the plant, inclusive of Gray in his 'Natural Arrangement,' published in 1821, until it was transferred, with the pretty story of a drowning lover, to that which now bears it. This had always been called in England Mouse-ear Scorpion-grass. In Germany, Fuchs . . . gives the name Vergiss nit Mein to the Teucrium Botrys. . . . In Denmark, a corresponding name, Forglemm mig icke, was given to the Veronica Chamædrys. At the same time, it would seem that in some parts of Germany the Myosotis palustris was known as the Echium amoris, and Vergiss mein nicht, as at the present day. This latter seems to be the plant to which the name rightfully belongs, and to which it was given in reference to the blossoms falling off and flying away. — Speedwell, from its blossoms falling off and flying away as soon as gathered: 'Speedwell' being equivalent to 'Farewell!' 'Good-bye!' a common form of valediction in old time, and synonymous with '*Forget-me-not*,' a name that appears to have been first given to this plant.—*Dr. A. Prior.*

The Veronica is probably meant in the following extract.

And now those vivid hours are gone,
Like mine own life to me thou art,
Where Past and Present, wound in one,
Do make a garland for the heart:
So sing that other song I made,
Half-anger'd with my happy lot,
The day, when in the chestnut shade
I found the blue *forget-me-not*.
Tennyson, The Miller's Daughter.

So long their punishments and penance last,

Then you must learn the use
And handling of your silver *fork* at meals;
The metal of your glass; these are main matters
With your Italian. *Id., Volpone*, iv. 1.

I observed a custom in all those Italian cities and townes through the whiche I passed, that is not used in any other country that I saw in my travels. . . : The Italian, and also most strangers that are commorant in Italy, do always at their meals use a little *fork* when they cut their meate. For while with their knife, which they hold in one hand, they cut their meat out of the dish, they fasten their *fork*, which they hold in the other hand, upon the same dish, so that whatsoever he be that, sitting in the company of any others at meal, should unadvisedly touch the dish of meat with his fingers from which all at the table do cut, he will give occasion of offence unto the company, as having transgressed the laws of good manners, in so much that, for his error, he shall be at the least brow-beaten if not reprehended in words. . . . I myself thought good to imitate the Italian fashion by this forked cutting of meat, not only while I was in Italy, but also in Germany, and oftentimes in England since I came home; being once quipped for that frequent use of my *fork*, by a certain learned gentleman, a familiar friend of mine, Mr. Laurence Whitaker, who in his merry humour doubted not to call me at table furcifer only for using a *fork* at table, but for no other cause.—*Coryat, Crudities.*

6. Dilemma; alternatives; choice between two evils.

Archbishop Morton is famous for the dilemma which he proposed to merchants and others whom he solicited to contribute. He told those who lived handsomely that their opulence was manifest by their rate of expenditure. Those, again, whose course of living was less sumptuous, must have grown rich by their economy. Either class could well afford assistance to their sovereign. This piece of logic, unanswerable in the mouth of a privy councillor, acquired the name of Morton's *fork*. Henry doubtless reaped great profit from these indefinite exactions, miscalled benevolences.—*Hallam, History of England*, vol. i. ch. i.

Form. *s.* [Lat. *forma*; *formo* = I form; *for matus* = formed; *formatio*, *-onis.*]

1. External appearance of anything; representation; shape.

It stood still; but I could not discern the *form* thereof.—*Job*, iv. 16.

2. In *Physics*, as opposed to Matter.

Matter, as wise logicians say,
Cannot without a *form* subsist;
And *form*, say I as well as they,
Must fail, if matter brings no grist. *Swift.*

The antithesis has been at different times presented by means of various images. One of the most ancient of these, and one which is still very instructive, is that which speaks of sensations as the matter, and ideas as the *form*, of our knowledge; just as ivory is the matter, and a cube the *form*, of a die. . . . Matter and *form* cannot by any means be detached from each other. All matter must have some *form*; all *form* must be the *form* of some material thing. If the ivory be not a cube, it must have a spherical or some other *form*. And the cube, in order to be a cube, must be of some material;—if not of ivory, of wood, or stone, for instance. A figure without matter is merely a geometrical conception;—a modification of the idea of space. Matter without figure is a mere abstract term;—a supposed union of certain sensible qualities which, so insulated from others, cannot exist. Yet the distinction of matter and *form* is real; and, as a subject of contemplation, clear and plain. Nor is the distinction by any means useless. The speculations which treat of the two subjects, matter and figure, are very different. Matter is the subject of the sciences of mechanics and chemistry; figure, of geometry. These two classes of sciences have quite different sets of principles. If we refuse to consider the matter and the *form* of bodies separately, because we cannot exhibit matter and *form* separately, we shut the door to all philosophy on such subjects. . . . The word *inform*, according to its Latin etymology, at first implied this process by which matter is invested with form. Thus Virgil speaks of the thunderbolt as *informed* by the hands of Brontes, and Steropes, and Pyracmon. And Dryden introduces the word in another place:—

'Let others better mould the running mass
Of metals, or *inform* the breathing brass.'

Even in this use of the word, the *form* is something superior to the brute manner, and gives it a new significance and purpose. And hence the term is again used to denote the effect produced by an intelligent principle of a still higher kind:—

'He *informed*
This ill-shaped body with a daring soul.'

And finally even the soul itself, in its original condition, is looked upon as matter, when viewed with reference to education and knowledge, by which it is afterwards moulded; and hence these are, in our language, termed *information*. If we confine ourselves to the first of these three uses of the term, we may correct the erroneous opinion of which we have just been speaking, and retain the metaphor by which it is expressed, by saying that ideas are not *transformed*, but *informed* sensations.—*Whewell.*

3. Formula.

He that will look into many parts of Asia and America, will find men reason there perhaps as acutely as himself, who yet never heard of a syllogism, nor can reduce any one argument to those *forms*.—*Locke.*

It lengthens out every act of worship, and produces more lasting and permanent impressions on the mind, than those which accompany any transient *form* of words that are uttered in the ordinary method of religious worship.—*Addison.*

4. ? Shape; ? beauty: (in which latter case it is a *Latinism* from *forma* = beauty, a secondary meaning).

He hath no *form* nor comeliness.—*Isaiah*, liii. 2.

5. Regularity; method; order.

What he spoke, though it lack'd *form* a little,
Was not like madness. *Shakespear, Hamlet*, iii. 1.

6. External appearance without the essential qualities; empty show. (as opposed to *matter* or *substance*).

Then those whom *form* of laws
Condemn'd to die, when traitors judg'd their cause.
Dryden.

Hence 'for *form*' = *nominally* as opposed to *really*.

7. Ceremony; external rites.

A long table, and a square table, or seat about the walls seem things of *form*, but are things of substance; for at a long table, a few at the upper end, in effect, sway all the business; but in the other form, there is more use of the counsellors' opinions that sit lower.—*Bacon, Essays.*

How am I to interpret, sir, this visit?
Is it a compliment of *form*, or love?
A. Philips, Distressed Mother.

8. Stated method; established practice; ritual and prescribed mode.

He who affirmeth speech to be necessary amongst all men, throughout all the world, doth not thereby import that all men must necessarily speak one kind of language; even so the necessity of polity and regimen in all churches may be held, without holding any one certain *form* to be necessary in them all.—*Hooker, Ecclesiastical Polity.*

9. Long seat.

I was seen with her in the manorhouse, sitting with her upon the *form*, and taken following her into the park.—*Shakespear, Love's Labour's lost*, i. 1.

If a chair be defined a seat for a single person, with a back belonging to it, then a stool is a seat for a single person without a back; and a *form* is a seat for several persons, without a back.—*Watts, Logick.*

10. As applied to *horses*. See extract.

But what is the recognized *form* of the racehorse? I must here explain to the tyro that the word *form* is used with two very different significations by racing men. ... In the common acceptation it is synonymous with shape, and merely means the mechanical development of the individual. But, in the language of the turf, when we say that a horse is in *form*, we intend to convey to our hearers that he is in high condition and fit to run. So, again, the word is used in still another sense, for we speak of a horse's *form* when we wish to allude to his powers on the turf, as compared with other well-known animals. Thus, if it be supposed that two three-year-olds, carrying the same weight, would run a mile and a half, and come in abreast, it is said that the *form* of the one is equal to that of the other.—*Walsh, The Horse*, ch. vi.

11. Class; rank of students.

It will be necessary to see and examine those works which have given so great a reputation to the masters of the first *form*.—*Dryden, Translation of Du Fresnoy's Art of Painting.*

12. Lair of a hare.

And fynd me ine *forme* where I syte,

I wot wele he wyle not me hyte.
For an acuris bred he wylle me se,
Or he will let his hondes rene. *Complaint of the Hare: Poem of the Fifteenth Century.*

Now for a clod like hare in *form* thy peer;
Now bolt and cudgel squirrels leap do move;
Now the ambitious lark, with mirrour clear,
They catch, while he, fool! to himself makes love.
Sir P. Sidney.

Have you observ'd a sitting hare,
List'ning and fearful of the storm
Of horns and hounds, clap back her ear,
Afraid to keep or leave her *form*? *Prior.*

13. Idea; essence; and thence (with confusion between causes and conditions, matters of time on one side and space on the other) force. Nevertheless, this is Bacon's use of the word.

In definitions, whether they be framed larger to augment, or stricter to abridge the number of sacraments, we find grace expressly mentioned as their true essential *form*, and elements as the matter whereunto that *form* doth adjoin itself.—*Hooker, Ecclesiastical Polity.*

They inferred, if the world were a living creature, it had a soul and spirit, by which they did not intend God, for they did admit of a deity besides, but only the soul or essential *form* of the universe.—*Bacon, Natural and Experimental History.*

The expectation of arriving at ultimate causes or essences continued long after the speculations of the ancients had been abandoned, and continues even to the present day to be a very general notion of the objects to be ultimately attained by physical science. Francis Bacon, the great remodeller of science, entertained this notion, and thought that, by experimentally testing natural phenomena, we should be enabled to trace them to certain primary essences or causes whence the various phenomena flow. These he speaks of under the scholastic name of *formes*—a term derived from the ancient philosophy, but differently applied. He appears to have understood by *form* the essence of quality; that in which, abstracting everything extraneous, a given quality consists, or that which, superinduced on any body, would give it its peculiar quality; thus the *form* of transparency is that which constitutes transparency, or that by which, when discovered, transparency could be produced or superinduced. To take a specific example of what I may term the sympathetic application of his philosophy:—'In gold there meet together yellowness, gravity, malleability, fixedness in the fire, a determinate way of solution, which are the simple natures in gold; for he who understands *form* and the manner of superinducing this yellowness, gravity, ductility, fixedness, faculty of fusion, solution, &c., with their particular degrees and proportions, will consider how to join them together in some body, so that a transmutation into gold shall follow.'—*Grove, Correlation of Physical Forces*, p. 7.

As it is the *form* which proximately and obviously makes the thing what it is (although there can be no *form* without matter), the word *form* came to be interchanged with essence and nature. ... It is ... a law or an idea, which are the same thing seen from opposite points.... Lava, heated metal, boiling water, the rays of the sun, all rank under one common *form* (that is law) of heat; namely, by which is meant that they, all and each, contain whatever is essential to heat.... The second meaning of the word *form* [is] that part of any object through which it ranks under a given law. Every new object presented to the mind is referred to different laws, called *forms*, by virtue of various qualities in itself, each of which is termed metonymically, and with respect to the law under which it is the means of ranking the representation, its *form*. ... Writers of this school give yet a third sense to the word *form*; as it denotes the law, so by an easy transition it stands for the class of cases brought together and united by the law. Thus, to speak of the *form* of an animal, might mean, first, the law or definition of animal in general; second, the part of any given animal by which it comes under the law and what it is; and last, the class of animals brought together under the law.—*Archbishop Thompson, An Outline of the necessary Laws of Thought*, §§ 11—14.

14. In *Philosophy*. See Formal, 8.

Natural philosophy is speculative or practical; the former divided into physics and metaphysics. ... Metaphysics ... had for its proper object the investigation of *forms*. ... The word *form* itself, being borrowed from the old philosophy, is not immediately intelligible to every reader. ... *Form* (Natura Naturans, as it was barbarously called) is the general law or condition of existence, in any substance or quality (Natura Naturata), which is wherever its *form* is. The conditions of a mathematical figure, prescribed in its definition, might in this sense be called its *form*, if it did not seem to be Lord Bacon's intention to confine the word to the laws of particular sensible existences. In modern philosophy, it might be defined to be that particular combination of forces which impresses a certain modification of matter subjected to their influence. To a knowledge of such *forms* or laws of essence and existence, at least in a certain degree, it might be possible, in Bacon's sanguine estimation of his own logic, for man to attain.—*Hallam, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth Centuries*, pt. iii. ch. iii. § 50.

Id., Comedy of Errors, v. 1.

2. In *Philosophy*. Connected with conditions rather than causes. *Not* deduced from Form 12.

Space, time, and number, may be conceived as forms by which the knowledge derived from our sensations is moulded, and which are independent of the differences in the matter of our knowledge, arising from the sensations themselves. Hence the sciences which have these ideas for their subject may be termed *formal* sciences. In this point of view, they are distinguished from sciences in which, besides these mere formal laws by which appearances are corrected, we endeavour to apply to the phenomena the idea of cause, or some of the other ideas which penetrate further into the principles of nature. We have thus, in the history, distinguished *formal* astronomy and *formal* optics from physical astronomy and physical optics.—*Whewell.*

Fórmalism. *s.* Character of formality; recognition and adoption of formulas.

They have in the exchequer brought rigour and *formalism* to their ultimate perfection.—*Burke, Works*, ii. 225. (Ord MS.)

So they perorate and speculate; and call on the friends of law, when the question is not law or no-law, but life or no-life. Pedants of the revolution, &c. Jesuits of it! Their *formalism* is great; great is their egoism.—*Carlyle, The French Revolution*, pt. iii. b. iii. ch. iv.

Formalist. *s.* One who practises external ceremony; one who prefers appearance to reality; one who seems what he is not; stickler for forms or formulæ.

It is a ridiculous thing, and fit for a satyr to persons of judgement, to see what shifts *formalists* have, and what prospectives to make superficies to seem a body that hath depth and bulk.—*Bacon.*

A grave, staunch, skilfully managed face, set upon a grasping aspiring mind, having got many a sly *formalist* the reputation of a primitive and severe piety.—*South, Sermons.*

2. Advocate for form in disputations.

It may be objected by certain *formalists*, that we can prove nothing duly without proving it in form.—*Lord Shaftesbury.*

The English and Dutch loudly applauded William's prudence and decision. He had cut the knot which the Congress had only twisted and tangled He had done in a month what all the *formalists* and pedants assembled at the Hague would not have done in ten years.—*Macaulay, History of England*, ch. xxii.

Formálity. *s.*

1. Ceremony; established mode of behaviour.

The attire, which the minister of God is by order to use at times of divine service, is but a matter of mere *formality*, yet such as for comeliness sake hath hitherto been judged not unnecessary.—*Hooker, Ecclesiastical Polity.*

Without consulting your minister, call together your whole council. Let it appear to the public that you can determine and act for yourself. Come forward to your people. Lay aside the wretched *formalities* of a king, and speak to your subjects with the spirit of a man, and in the language of a gentleman. Tell them you have been fatally deceived.—*Letters of Junius*, let. 51.

2. Solemn order, method, mode, habit, or dress.

If men forswear the deeds and bonds they draw,
Though sign'd with all *formality* of law;
And though the signing and the seal proclaim
The barefac'd perjury, and fix the shame.
Dryden, Translation of Juvenal.

The pretender would have infallibly landed in our northern parts, and found them all sat down in their *formalities*, as the Gauls did the Roman senators.—*Swift.*

3. External appearance.

To fix on God the *formality* of faculties, or affections, is the imposture of our fancies, and contradictory to his divinity.—*Glanville, Scepsis Scientifica.*

4. Essence; quality by which anything is what it is.

May not a man vow to A. and B. that he will give a hundred pound to an hospital? Here the vow is made both to God and to A. and B. But here A. and B. are only witnesses to the vow; but the *formality* of the vow lies in the promise made to God.—*Bishop Stillingfleet.*

Fórmalize. *v. a.* Model; modify.

The same spirit which anointed the blessed soul of our Saviour Christ, doth so *formalize*, unite, and actuate his whole race, as if both he and they were so many limbs compacted into one body.—*Hooker.*

Fórmalize. *v. n.* Affect formality; be fond of ceremony.

Our gallants can *formalize* in other words.—*Hales Golden Remains*, p. 84.

They turned their poor cottages into stately palaces, their true fasting into *formalizing* and partial abstinence.—*Hales, Golden Remains*, p. 111.

He *formalized* so long upon this, that Ireland remained still unsupplied.—*Lord Clarendon, History of the Grand Rebellion*, b. xi.

There were many particulars in it, which the officers on the king's side, who had no mind to a cessation, *formalized* much upon.—*Id., Life*, i. 148.

Fórmally. *adv.* In a formal manner.

1. According to established rules, methods, ceremonies, or rites.

Formally, according to our law,
Depose him. *Shakespear, Richard II.* i. 3.

The Church of Rome, which *formally* prohibits the reading of all heretical books, places the writings of the Reformers in the 'Index Librorum Prohibitorum.' Every Roman Catholic who reads a book included in this list, incurs the penalty of excommunication 'latæ sententiæ.' The Protestant churches, in like manner, discourage the reading of heterodox and erroneous writings; but they have never gone the length of publishing an index of condemned books.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. ix.

2. Ceremoniously; stiffly; precisely.

To be stiff and *formally* reserved, as if the company did not deserve our familiarity, is a downright challenge of homage.—*Collier, Essay on Pride.*

3. In open appearance; in a visible and apparent state.

You and your followers do stand *formally* divided against the authorised guides of the church, and the rest of the people.—*Hooker, Ecclesiastical Polity.*

4. Essentially; characteristically.

This power and dominion is not adequately and *formally* the image of God, but only a part of it.—*South, Sermons.*

The Heathens and the Christians may agree in material acts of charity; but that which *formally* makes this a Christian grace, is the spring from which it flows.—*Bishop Smalridge.*

Formátion. *s.*

1. Act of forming or generating.

The matter discharged forth of volcanos, and other spiracles, contributes to the *formation* of meteors.—*Woodward.*

The solids are originally formed of a fluid, from a small point, as appears by the gradual *formation* of a fœtus.—*Arbuthnot.*

Complicated ideas, growing up under observation, give not the same confusion, as if they were all offered to the mind at once, without your observing the original and *formation* of them.—*Watts, On the Mind.*

With this view, as much meaning as possible should be thrown into the *formation* of the word itself; the aids of derivation and analogy being made available to keep alive a consciousness of all that is signified by it. In this respect those languages have an immense advantage which form their compounds and derivatives from native roots, like the German, and not from those of a foreign or a dead language, as is so much the case with English, French, and Italian: and the best are those which form them according to fixed analogies, corresponding to the relations between the ideas to be expressed. All languages do this more or less, but especially among modern European languages, the German; while even that is inferior to the Greek, in which the relation between the meaning of a derivative word and that of its primitive, is in general clearly marked by its mode of *formation*; except in the case of words compounded with prepositions, which, it must be acknowledged, are often, in both those languages, extremely anomalous.—*J. S. Mill, System of Logic.*

2. In *Geology*. See extract.

If we drain a lake which has been fed by a small stream, we frequently find at the bottom a series of deposits disposed with considerable regularity, one above the other.... Now if a second pit be dug in the same continuous lacustrine *formation*, at some distance from the first, nearly the same series of beds is commonly met with, yet with some variations.... The term *formation*, which I have used in the above explanation, expresses in geology any assemblage of rocks which have some character in common whether of origin, age, or composition. Thus we speak of stratified and unstratified, freshwater and marine, aqueous and volcanic, ancient and modern, metalliferous and non-metalliferous *formations*.—*Sir C. Lyell, Manual of Elementary Geology*, ch. i.

Fórmative. *adj.* Having the power of giving form; plastic.

As we have established our assertion of the seminal production of all kinds of animals; so likewise we affirm, that the meanest plant cannot be raised without seed, by any *formative* power residing in the soil.—*Bentley, Sermons.*

There is not merely a juxtaposition of materials, by which the new proposition contains all that its component parts contained; but also a *formative* act exerted by the understanding, so that these materials are contained in a new shape. We must remember, therefore, that our inductive tables, although they represent the elements and the order of these inductive steps, do not fully represent the whole signification of the process in each case.—*Whewell, Novum Organon Renovatum.*

The shell [of birds' eggs] consists in great part of carbonate of lime, with a little carbonate of magnesia and phosphate of lime and magnesia. The appearance to the unaided eye of pores on the surface of the shell is due to the impressions of the villi of the *formative* membrane: the permeability of the shell by the atmosphere depends on a more minutely porous texture.—*Owen, Anatomy of Vertebrates.*

Fórmer. *s.* One who, or that which, forms; maker; contriver; planner.

The wonderful art and providence of the contriver and *former* of our bodies, appears in the multitude of intentions he must have in the formation of several parts for several uses.—*Ray, Wisdom of God manifested in the Works of the Creation.*

Fórmer. *adj.* [As a Comparative of *fore*, this word is irregular; the *m* being intrusive, and, when that is accounted for, the *-er* being catachrestic. There is *no* true Comparative of *fore*, or rather there is no real Positive. This is because the notion of *beforeness* itself involves a comparison, and *fore*, even in its simplest form, is, in the matter of degree, a natural Comparative; at any rate, a Comparative rather than a Positive term. The A.S. Comparative was *fyrre*; the A.S. Superlative, *forma*. Out of this the present word, a Comparative formed on a Superlative, has originated. Such, at least, is the case where the *r* is sounded. Where it is not, it may be argued that the irregularity is limited to the use of a Superlative instead of a Comparative, and that *former* is merely *forma* badly spelt. For a similar refinement see remarks on the *-l-* in *could*. For the import of the *-m-* see Foremost. The true Superlative of *fyrre* is First. In respect to its meaning, Johnson remarks that *foremost* is generally applied to rank, place, and degree, and *former* only to time; in objection to which Todd refers to the two extracts from Spenser. In the main, however, the remark of Johnson is correct.

Another question applies to its import as a Comparative; i.e. how far it is limited to the expression of the beforeness of one object out of two, or the beforeness of one object out of many. No one says that Aleph is the *former* letter of the Hebrew alphabet. To say, however, that 'out of the two Greek words from which *Alpha-bet* is derived, viz. *Alpha* and *Beta*, the *former* coincides with the Hebrew *Aleph*, and the *latter* with the Hebrew *Beth*,' is better than to say 'the *first*—the *last*.' The converse, however, is common.

Lastly, let it be noted that *former* is a Pronoun rather than an *Adjective*; being, in many respects, a Numeral. Its construction with *the*, without a substantive, is the commonest.]

1. Preceding.

a. In order of *sequence*.

Thy air,
Thou other gold-bound brow, is like the first:
A third is like the *former*.
Shakespear, Macbeth, iv. 1.

b. In order of *notice*.

A bad author deserves better usage than a bad critick: a man may be the *former* merely through the misfortune of an ill judgement; but he cannot be the latter without both that and an ill temper.—*Pope.*

2. In *time*.

The present point of time is all thou hast,
The future doubtful, and the *former* past. *Harte.*

The radical meaning in both [*for* and *fore*] is *in front of*. When we speak of one event as before or after another, our own progress in time is transferred to the events of the world, which are typified as a succession of animated beings moving on in the opposite direction, and taking place in time at the

moment when they are brought face to face with the witness. Thus the event of the present moment is before or in front of the train of futurity, and those which have already passed by the instant of actual experience are in front of the present event, by which they are succeeded. The events then which have passed into the region of memory, although in reference to our own progress in life considered as left behind us, yet in the order of their own succession are more to the front than the present, and are therefore spoken of as belonging to *for-mer* or *more fore* times.—*Wedgwood, Dictionary of English Etymology.*

3. In *place.* Anterior, fore, or front.

Echidna is a monster direfull dred,
Whom gods doe hate, and heavens abhorr to see;
So hideous is her shape, so huge her hed,
That even the hellish fiends affrighted bee
At sight thereof, and from her presence flee;
Yet did her face and *former* parts professe
A faire young mayden, full of comely glee;
But all her hinder parts did plaine expresse
A monstrous dragon full of fearfull uglinesse.
Spenser, Faerie Queen, vi. 6, 10.

4. First.

Amongst the which there fortuned to bee
The noble Briton prince with his brave peare;
Who, when he none of all these knights did see,
Hastily bent that enterprise to heare,
Nor undertake the same for cowheard feare,
He stepped forth with courage bold and great,
Admyred of all the rest in presence there,
And humbly gan that mightie queen entreat
To graunt him that adventure for his *former* feat.
Spenser, Faerie Queen, v. 10, 15.

Fórmerly. *adv.*

The next in nothing lost.

In his own reign the wish, 'Mayest thou be the vizier of sultan Selim,' had become a common *formula* of cursing among the Ottomans.—*Sir E. Creasy, History of the Ottoman Turks,* ch. viii.

This huge insurrectionary movement, which we liken to a breaking out of Tophet and the abyss, has swept away royalty, aristocracy, and a king's life. The question is, What will it next do; how will it henceforth shape itself? Settle down into a reign of law and liberty; according as the habits, persuasions and endeavours of the educated, monied, respectable class prescribe? That is to say: the volcanic lava-flood, bursting up in the manner described, will explode and flow according to Girondin *formula* and pre-established rule of philosophy? . . . Which something, we may further conjecture, will not be a *formula,* with philosophical propositions and forensic eloquence; but a reality, probably with a sword in its hand! As for the Girondin *formula,* of a respectable republic for the middle classes, all manner of aristocracies being now sufficiently demolished, there seems little reason to expect that the business will stop there.—*Carlyle, History of the French Revolution,* pt. iii. b. iii. ch. i.

If any one, having possessed himself of the laws of phenomena as recorded in words, whether delivered to him originally by others or even found out by himself, is content from thenceforth to live among these *formulæ,* to think exclusively of them, and of applying them to cases as they arise, without keeping up his acquaintance with the realities from which these laws were collected—not only will he continually fail in his practical efforts, because he will apply his *formulæ* without duly considering whether, in this case and in that, other laws of nature do not modify or supersede them; but the *formulæ* themselves will progressively lose their meaning to him, and he will cease at last even to be capable of recognising with certainty whether a case falls within the contemplation of his *formula* or not. —*J. S. Mill, System of Logic.*

In the Cape anteater the vertebral *formula* is:—7 cervical, 13 dorsal, 8 lumbar, 6 sacral, and 25 caudal.—*Owen, Anatomy of Vertebrates.*

Hence, our *formula* as further amended reads thus:—Life is a definite combination of heterogeneous changes, both simultaneous and successive.—*Herbert Spencer, Data of Biology.*

Fórmularize. *v. a.* Reduce to a formula.

Fórmulate. *v. a.* Reduce to formula.

Irrespective of their degrees of composition, plants may, and do, become changed in their general forms. Fórnicate. *v. n.* Act as a fornicator.

The heroical spirit of Luther . . . chose rather to be an honest husband than a *fornicating* friar.—*Bishop Hall, Honour of married Clergy,* p. 42.

Fornicátion. *s.* [Lat. *fornicatio, -onis,* from *fornix* = arch. The word still retains this sense in old masonry. As the arched places in Rome, connected as they were with the architecture of those parts of the city which, from either the fact of building going on in them, or their connexion with sewers and the like, were the resort of prostitutes, the word took its present sense, which is old. Juvenal uses *fornix* = brothel. In the extract from Milton under Fornicated, we have something between a Latinism and a pun.]

Spenser, Shepherd's Calendar, July.

Forse. *s.* Waterfall; cataract. (Provincial, rather than generally current; noted, however, chiefly for the sake of correcting the ordinary spelling, which is with *c* (*force*). It occurs, in Great Britain, chiefly to the north of the Humber, and, on the continent, in Scandinavia. Hence, it passes for a Danish word. If it is comparatively rare in Germany and southern England, it should be remembered that waterfalls are also rare, comparatively. It

is generally met with in composition, and as a geographical term, i.e. as a proper, rather than a common, name. It has passed into several personal names, e.g. *Wilber-force*, the spelling being with the incorrect *c*. As a philological curiosity, a much used passage in the Greek of Constantinople gives it in the form φόρος, as applied to the cataracts of a river so distant from Scandinavia as the Dnieper, indicative of (or supposed to be so) the Swedish conquest of Russia in the ninth century. So much for its confusion with *fors*.. It has also been spelt *foss*, pointing rec[illegible]e Latin *fossa* = ditch.)

T[illegible]t. 9, 1769.—After dinner I went along the Mil[illegible]*fors*e turnpike four miles to see the falls or *force* W[illegible]e river Kent.—*Gray, Letter to Dr. Wharton.*

Our good purposes *foreslowed* are become our tormentors upon our death-bed.—*Bishop Hall.*
Chromis, how many fishers do you know
That rule their boats, and use their nets aright;

It is supposed to have been once a word of honour in address to women. It is probable that an inferior, being called, shewed his attention by answering in the word yes, *forsooth*, which in time lost its true meaning; and instead of a mere exclamatory interjection, was supposed a compellation. It appears in Shakespear to have been used likewise to men.—*Todd.*

Forswéar. *v. a.* preterite *forswore*; past part. *forsworn*. [There are two *fors* that come under this category:
1. A German *for*.
2. A French *for*.
The German *for* = Mœsogothic *fáir*; whereas *fore* = *faur* in the same language. In composition = German *ver-*, as in *verloren* = *forlorn*. How it passes into the significations of *fore*, may be understood by considering the connection between *wholly*, *hopelessly*, *passed by*, *passing in front of*, and the like. Yet the distinction is older than the history of the Germanic languages.
The French *for*, unless we look at it as German also, has its connections with *foras*, *foris*, *fora* (= door), and *hors*, as in *hors de combat* = out of the (field of) combat; and the fact of the Old French giving the words *forjuger* (see Forjudge) and *forclure* (see Forclose) is the reason why the ordinary spelling of these words has been changed.
The fundamental connection between the German *for* and *fore* is a matter of no difficulty. They are both connected with the *fr-* in *from*, and the Latin *pro* and *præ*. But the French *fora* points to Gr. θύρα, English *door*.
Practically, then, the two *fors* are separate words, both in respect to one another, and in respect to *fore*; though more so in the former case than in the latter.]

2. Deny upon oath.
Observe the wretch who hath his faith forsook,
How clear his voice, and how assur'd his look!
Like innocence, and as serenely bold
As truth, how loudly he *forswears* thy gold!
Dryden, Translation of Juvenal.

3. Be perjured; swear falsely.
To leave my Julia, shall I be *forsworn?*
To leave fair Silvia, shall I be *forsworn?*

Provokes me to this threefold perjury.

It is either regular or irregular; and with respect to time, may be distinguished into durable and temporary.—*Harris.*

The Phœnicians, though an unwarlike nation, yet understood the art of *fortification*.—*Broome, On the Odyssey.*

2. Place built for defence.

The hounds were uncoupled, and the stag thought it better to trust to the nimbleness of his feet, than to the slender *fortification* of his lodging.—*Sir P. Sidney.*

It has never, we believe, been remarked, that two of the most striking lines in the description of Ahithophel are borrowed from a most obscure quarter. In Knolles's History of the Turks, printed more than sixty years before the appearance of Absalom and Ahithophel, are the following verses, under a portrait of the Sultan Mustapha the First:—

'Greatnesse on goodnesse loves to slide, not stand,
And leaves for *Fortune's* ice Vertue's firme land.'

Dryden's words are—

'But wild Ambition loves to slide, not stand,
And *Fortune's* ice prefers to Virtue's land.'

The circumstance is the more remarkable, because Dryden has really no couplet which would seem to a good critic more intensely Drydenian, both in thought and expression, than this, of which the whole thought, and almost the whole expression, are stolen.—*Macaulay, Critical and Historical Essays, —Sir W. Temple.*

2. Good or ill that befalls man.

6. Property that a woman possesses: (sometimes the *person* possessing).

Hast thou given credit to vain predictions of men, to dreams or *fortunetellers*, or gone about to know any secret things by lot?—*Duppa, Rules for Devotion.*

There needs no more than impudence on one side, and a superstitious credulity on the other, to the setting up of a *fortuneteller.—Sir R. L'Estrange.*

2. The Law Courts as opposed to the Houses of Parliament: (of common use in the biography of lawyers, in speaking of the two chief scenes for the display of their ability).

I have spoken of Lord Camden's judicial conduct in the Courts of Westminster Hall, and in the House of Lords. He was, however, fully more eminent in the senate than in the *forum*. He brought into parliament a high professional reputation; and beside the reputation which this and his great office gave him, his talents were peculiarly suited to shine in debate.—*Lord Brougham, Historical Sketches of Statesmen during the Reign of George III., Earl Camden.*

Forwearied in this action of swift speed,
Crave harbourage within your city walls.
Shakespear, King John, ii. 1.

Forwént. *v. a.* [*went* + *for*. It is thus entered because the present form *forwend* has not been found, and probably has no existence; the present compound having originated after the apparent separation of *went* from *wend* (= turn), and its apparent connection with *go*. Its import is exactly that of the preterite of *forgo*; but as this is not *goed*, but (the archaic) *yode*, the exact origin of the word is doubtful. Still it was probably in reference to *go* that it was formed. *Etymologically*, however, its connection, and its *only* connection, is with Wend. See also Go.] Forfeited; lost.

Thou shouldest not have known thyselfe to be any more beholden to him, than to the fire for heating thee, or to the sunne for giving thee light; because they should no more bee eyther fire or sunne, if they *forwent* that nature.—*Trewnesse of Christian Religion*, 128. (Ord MS.)

Fóssil. *s.* [Lat. *fossilis* = dug-up; *fossus*, pass. part. of *fodio* = dig.] How far the early import of this word corresponded with its derivation may be seen in the extracts from Hill and Locke. At present it belongs to *Geology* or *Paleontology*, rather than to *Mineralogy*; though, for a scientific term, it is perhaps more generally current than any term of science. The typical fossil is either an animal or a vegetable (whole or part) embedded in some definite stratum (of the age of which it is a criterion), of which the organic matter has been wholly superseded by mineral; roughly speaking, a shell, bone, or plant, converted into stone. Nevertheless, in the newer formations the conversion is only incipient or imperfect. Again, of late, specimens of human workmanship, the material of which was originally of stone (flint), have been discovered in the same relations to the surface of the soil as recognized fossils, a fact which has to some extent carried back the term towards its earlier and more general meaning. These are, perhaps, *fossil* (*fossil-like*) *remains* rather than true *fossils*. A collector of them may be called a *fossilist*. Nevertheless, with the words Fossilize and Fossilization, which refer mainly, if not wholly, to the change of structure from animal or vegetable to mineral, it is convenient to restrict the term, at least as a substantive, to specimens which have undergone a change of structure, total, considerable, or slight, as the case may be.

By the word *fossil*, used as a denomination of one of three general divisions of natural productions, we understand bodies formed usually within the earth, sometimes on its surface, and sometimes in waters; of a plain and simple structure, in which there is no visible difference of parts, no distinction of vessels and their contents, but every portion of which is similar to and perfect as the whole.—*Sir J. Hill, Materia Medica.*

In this globe are many other bodies, which, because we discover them by digging into the bowels of the earth, are called by one common name *fossils*; under which are comprehended metals and minerals. —*Locke.*

Used *adjectivally*.

Learned men long conceived it a bituminous and *fossile* body.—*Sir T. Browne, Miscellanies*, p. 10.

Fossilíferous. *adj.* [Lat. *fero* = bear.] Yielding fossils.

It has been truly observed, that when we arrange the *fossiliferous* formations in a chronological order, they constitute a broken and defective series of monuments.—*Sir C Lyell, Principles of Geology*, ch. xiii.

Fóssilist. *s.* One who studies the nature of, one who collects, fossils.

Fossórial. *adj.* Adapted to, formed for, or addicted to, digging; i.e. rooting up, or burrowing in, the ground: (the term being chiefly used in *Zoology*).

These are the principal muscles of the fore extremity which require notice. Their modifications, in respect of number and strength, relate to the act of digging up the soil. . . . It is for this purpose that the three middle digits of the hand are developed at the expense of the other two, which are rudimental; the whole power of the deep and superficial flexors is concentrated upon the *fossorial* and well-armed fingers; and, by the single common tendon in which the fleshy fibres of these muscles terminate, they move them collectively and simultaneously. . . . In no Marsupial is the hand so cramped as in the Perameles, excepting in the Chæropus, where the functional and *fossorial* fingers are reduced from three to two. It is in relation to this condition, doubtless, that the clavicles are wanting in these genera, while all other Marsupials possess them.—*Owen, Anatomy of Vertebrates.*

The Rodentia closely resemble the Marsupialia in their muscular system; with like modifications according to the absence or presence of clavicles, and to the gradatory, saltatory, scansorial, and *fossorial* movements of the species respectively.—*Ibid.*

A fostermothe[illegible] one to whom the child of another perso[illegible] is made over not only to nurse by suckling, but to take into her house, and bring up as one of her own; adopt it (in short) for a time. Always an adopter, and generally a wetnurse as well, she was the true foster-parent. The fosterfather, who might be bringer-up as well, was generally only the foster-mother's husband. In Ireland, in Anglo-Saxon England, and at present in Iceland, the system was and is widely spread; the bond between the half-adopted child and the child whose suckling he either shared or monopolized being a close one. *Foster-sister* and *foster-parent* are two words rather than compounds.

In Germany it is *fingerhut* (= finger hat, or thimble); and, in the languages derived from the Latin, *digitalis* (*digitus* = finger). The shape of the flower makes both these names intelligible. Anything pointing towards the *fox* is found only in the Norwegian, *rævebiolle, rebbiolle, robiolle, rævebielde,* where *ræve* = fox. These are provincial, the Danish being, as the German, *fingerhat.* That the first element has nothing to do with the botanist Fuchs (see Fuchsia), as has been suggested, is shown by these Norwegian forms as well as by the A.S. The latter element is probably connected with Clove.] Native plant so called, Digitalis purpurea.

Collier had taxed him [Congreve] with profaneness for calling a clergyman Mr. Prig, and for introducing a coachman named Jehu, in allusion to the King of Israel, who was known at a distance by his furious driving. Had there been nothing worse in the Old Bachelor and Double Dealer, Congreve might pass for as pure a writer as Cowper himself, who, in poems revised by so austere a censor as John Newton, calls a *fox-hunting* squire Nimrod, and gives to a chaplain the disrespectful name of Smug.—*Macaulay, Critical and Historical Essays, Comic Dramatists of the Restoration.*

3. In *Arithmetic.* See second extract.

Neither the motion of the moon, whereby months are computed, nor the sun, whereby years are accounted, consisteth of whole numbers, but admits of *fractions* and broken parts.—*Sir T. Browne, Vulgar Errours.*

A *fraction* is a part, or parts, of the unit, and written with two figures, with a line between them, as ½, ⅔, ⅝, &c. The figure above the line is called the numerator, and the under one the denominator, which shows how many parts the unit is divided into; and the numerator shows how many of those parts are meant by the *fraction.*—*Walkinghame, Tutor's Assistant.*

When I speak of expressing in the form of a *fraction*, the probabilities in favour of the truth of some proposition, it has been by some persons assumed—tacitly though not in express words—that the opposite *fraction*—the remaining chances,—must express the probability of the proposition's being false. Thus, if certain witnesses depose to having seen A. B. in London at a certain time; and it is calculated that the result of their testimony goes to establish a probability equal to ¾, that he was there at that time, it is assumed, without the smallest grounds, that this amounts to a probability (equal to ¾) of his having not been in London, but elsewhere; whereas in truth there is no tittle of evidence to that effect. The ¾ only expresses the compatibility of his absence from London with the existence of the testimony of those witnesses.—*Whately, Logic*, postscript.

4. Schism: (itself from σχίζω = split). *Rare.*

To one of these heads most of the disputes of Christendom may be reduced; so that I believe the present *fractions* are from the same course which St. Paul observed in the Corinthian schism.—*Jeremy Taylor, Liberty of Prophesying*, 403. (Ord MS.)

Fráctional. *adj.* Belonging to, comprising, or constituted by, a broken number.

We make a cypher the medium between increasing and decreasing numbers, commonly called absolute or whole numbers, and negative or *fractional* numbers.—*Cocker, Arithmetick.*

Beginning with the ancient republics, we see that, even in those which admitted the numerical or democratic principle to the fullest extent, there was, in the first place, a total exclusion of the numerous class of slaves, and, secondly, an exclusion of all free women, and males under a certain age. By these deductions from the principle of an universal comprehension of individual interests, the body of citizens exercising political franchises was reduced to a *fractional* part of the entire population. For example, in the Athenian State, during its purely democratic period, the numbers would stand thus:—Adult male free citizens, exercising political franchises, 21,000; free women and children, 63,000; slaves, 400,000.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. viii.

His gracious edict the same *franchise* yields
To all the wild increase of woods and fields.
Dryden.

The old English government was one of a class of limited monarchies which sprang up in Western Europe during the middle ages.... Their polity naturally took the same form.... All had kings, and in all the kingly office became by degrees strictly hereditary. All had nobles bearing titles which had originally indicated military rank. The dignity of knighthood, the rules of heraldry, were common to all. All had richly endowed ecclesiastical establishments, municipal corporations enjoying large *franchises,* and senates whose consent was necessary to the validity of some public acts.—*Macaulay, History of England,* ch. i.

4. Right, or power, of voting in elections for the House of Commons; principle according to which such power is enacted; amount of property constituting it.

The elections for Exeter appear to have been in that age observed by the nation with peculiar interest. For Exeter was not only one of the largest and most thriving cities in the kingdom, but was also the capital of the West of England, and was much frequented by the gentry of several counties. The *franchise* was popular. Party spirit ran high;

and the contests were among the fiercest and the longest of which there is any record in our history. —*Macaulay, History of England*, ch. xxiv.

Fráncolin. *s.* [Italian, *francolino*.] Bird so called akin to the partridges, of the genus or subgenus Francolinus.

Certain divisions adopted by our author in the genus Perdix, have been necessitated by the differences of conformation or habits observed in certain of its numerous species. The true partridges, as we have observed, never live in forests; they do not perch habitually, and never frequent humid or moist situations. All the *francolins* live in forests along the banks of rivers. They perch on trees during the day, and always at night they frequent marshy and humid places, where they find a different sort of aliment from that which the true partridges are habituated to seek in open plains and cultivated fields. There are marked differences of habits and manners; but disparity of form is not so great. . . . The name *francolin* is the francolino of the Italians. This name is applied to different birds, but more especially to this species, on account of the exemption it enjoys from being shot at indiscriminately, on account of its rarity and the excellence of its flesh.—*Translation of Cuvier's Règne Animal.*

Though it seem the solidest wood, if wrought before it be well seasoned, it will show itself very *frangible.—Boyle.*

Fit mate for such a mincing minion,
Who in her looseness took exceeding joy;

Of her lewd parts to make companion.

He's a frank *franion*, a merry companion.

They turn the letters over and over, and upside and down; arrange, confuse, mistake, assort; pretend, like Champollion, to decipher illegible franks, and deliver with a slight remark, which is intended as a friendly admonition, the documents of the unlucky wight who encourages unprivileged correspondents. A letter was delivered to Miss Dacre. She started, exclaimed, blushed, and tore it open. 'Only you, only you,' she said, extending her hand to the young Duke, 'only you were capable of this!' It was a letter from Arundel Dacre, not only written but *franked* by him.—*Disraeli the younger, The Young Duke*, ch. vi.

Frankincense is a dry resinous substance in pieces or drops, of a pale yellowish white colour; a strong smell, but not disagreeable, and a bitter, acrid, and resinous taste. It is very inflammable. We are still uncertain as to the place whence *frankincense* is brought, and as to the tree which produces it.—*Sir J. Hill, Materia Medica.*

Frankplédge. *s.* [Lat.] See extract.

For the ancient custom of England for the preservation of the publick peace was, that every free born man at fourteen years of age, religious persons, clerks, knights, and their eldest sons excepted, should find security for his fidelity to the king, or else be kept in prison: whence it became customary for a certain number of neighbours to be bound for one another, to see each man of their pledge forthcoming at all times, or to answer the transgression of any one absenting himself. This was called *frankpledge*, and the circuit thereof was called decenna, because it commonly consisted of ten households; and every particular person thus mutually bound, was called decennier. This custom was so strictly observed, that the sheriffs in every county did from time to time take the oaths of young ones as they grew to the age of fourteen years, and see that they combined in one dozen or other: this branch of the sheriffs' authority was called visus *franciplegii*, view of *frankpledge.—Cowell.*

Perhaps the enforcement of the *frank pledge* system has been confounded with their establishlishment.—*C. H. Pearson, The early and middle Ages of England*, ch. xi.

I hope that no French *fraternization*, which the relations of peace and amity with systematised regicide would assuredly, sooner or later, draw after them, even if it should overturn our happy constitution itself, could so change the hearts of Englishmen, as to make them delight in representations and processions, which have no other merit than that of degrading and insulting the name of royalty.—*Burke, On a Regicide Peace.*

Fráternize. *v. n.* (The characteristic extract from Todd stands as it was found, many similar ones being expunged, inasmuch as it shows both the antiquity of the word taken simply as a word, and the date when it took currency). Enter into a state of fraternity.

This word has been supposed to have been introduced at the commencement of the French democratical revolution; when pretensions of universal brotherhood were made the cloak of universal villainy. But the word, both in French and English, is at least of two hundred years' age; for thus Cotgrave renders the French *fraterniser*, 'to *fraternize*, to concur with, to be near unto, to agree as brothers.' In the cant of modern philosophy, the verb has been actively employed.—*Todd.*

Free and easy. Making one's self at home: (applied to clubs and convivial or other meetings characterized by the absence of formality, where it is often *substantival*).
Next is the club, where to their friends in town,
Our country neighbours once a month come down.
We term it *free-and-easy*, and yet we
Find it no easy matter to be free:
Even in our small assembly, friends among,
Are minds perverse, there's something will be wrong;
Men are not equal; some will claim a right
To be the kings and heroes of the night;
Will their own favourite themes and notions start,
And you must hear, offend them, or depart.
Crabbe, The Borough.
Look at banks, insurance offices, dock companies, canal companies, . . . associations of medical pupils for procuring subjects, associations of country gentlemen for keeping fox-hounds, book societies, benefit societies, clubs of all ranks, from those which have lined Pall-Mall and St. James's Street with their palaces, down to the *Free-and-easy* which meets in the shabby parlour of a village inn.—*Macaulay, Critical and Historical Essays, Gladstone on Church and State.*

Free-bench. *s.* [two words rather than a compound.] See extract.
Freebench [is] that estate in copyhold lands which the wife hath on the death of her husband for her dower according to the custom of the manor; but it is said that the wife ought to be a virgin, and is to hold the land only so long as she lives sole and continent. Of this *free-bench* several manors have several customs; and Fitzherbert calls it a custom, whereby in certain cities the wife shall have the whole lands of the husband for her dower. In the manors of East and West Embourne in the county of Berks, and the manor of Torre in Devonshire, and other parts of the west of England, there is a custom that when the copyhold tenant dies, his widow shall have her *free-bench* in all his customary lands, 'dum sola et casta fuerit;' yet nevertheless, on her coming into the court of the manor, riding backwards on a black ram, and saying [certain] words, . . . the steward is bound by the custom to re-admit her to the *free-bench.*—*Jacob, Law Dictionary.*

Free-cost. *s.* Freedom from expense, charges, or cost.
We must not vouch any man for an exact master in the rules of our modern policy, but such a one as has brought himself so far to hate and despise the absurdity of being kind upon *freecost*, as not so much as to tell a friend what it is o'clock for nothing.—*South, Sermons.*

Free-denizen. *s.* Citizen.
Plato thought it meet, that in every city or commonweal, as often as any good or harm did happen to any citizen or *freedenizen* thereof, it should not be counted that man's good or harm only, but the good or harm of the whole city.—*Dr. Jackson, Works*, iii. 619.
The *true verb* formed from this is, perhaps, a compound.
No worldly respects can *free-denizen* a Christian here, and of 'peregrinus' make him 'civis.'—*Bishop Hall, Remains*, p. 202.

Freébooter. *s.* [see last extract.] Robber; plunderer; pillager; buccaneer.
Perkin was not followed by any English of name, his forces consisted mostly of base people and *free-*

booters, fitter to spoil a coast than to recover a kingdom.—*Bacon, History of the Reign of Henry VII.*

The earl of Warwick had, as often as he met with any Irish frigates, or such *freebooters* as sailed under their commission, taken all the seamen.—*Lord Clarendon, History of the Grand Rebellion.*

Freebooter is one who, without the authority of national warfare, makes free to appropriate as booty whatever falls into his hand. The name was especially given to the buccaneers who infested the coast of America in the sixteenth and seventeenth centuries, and was pronounced by the French *flibustier*, by the Spaniards *filibuster*. From the latter has arisen, in the present age, *fillibuster*, a name given in America to adventurers making piratical expeditions against states of the Spanish race.—*Wedgwood, Dictionary of English Etymology.*

[Our word is in French *flibutier*, or *flibustier*; sometimes it is written *fribustier*. And our old orthography is *freebutter*. See Sidney State-Papers, vol. ii. p. 78. Letter in 1597.—*Todd.*]

Having to advise the publick, may speak free.
Milton, Translation from Euripides.

O baseness, to support a tyrant's throne,
And crush your *freeborn* brethren of the world!
Dryden.

I shall speak my thoughts like a *freeborn* subject, such things perhaps as no Dutch commentator could, and I am sure no Frenchman durst.—*Id., Dedication to the Translation of the Æneid.*

Freédman. *s.* Slave manumitted: (translation of the Latin *libertus*).

The *freedman* jostles, and will be preferr'd;

Freédom. *s.*

1. Liberty; exemption from servitude; independence.

The laws themselves they do specially rage at, as most repugnant to their liberty and natural *freedom.*—*Spenser, View of the State of Ireland.*

O *freedom!* first delight of human kind!
Not that which bondmen from their masters find,
The privilege of doles; not yet t' inscribe
Their names in this or t'other Roman tribe:
That false enfranchisement with ease is found;
Slaves are made citizens by turning round.
Dryden, Translation of Persius.

2. Privileges; franchises; immunities.

By our holy sabbath have I sworn
To have the due and forfeit of my bond:
If you deny it, let the danger light
Upon your charter, and your city's *freedom.*
Shakespear, Merchant of Venice, iv. 1.

3. Power of enjoying franchises.

This prince first gave *freedom* to servants, so as to become citizens of equal privileges with the rest.—*Swift.*

4. Exemption from fate, necessity, or predetermination.

I else must change
Their nature, and revoke the high decree
Unchangeable, eternal, which ordain'd
Their *freedom*: they themselves ordain'd their fall.
Milton, Paradise Lost, iii. 138.

In every sin, by how much the more free will is in its choice, by so much is the act the more sinful; and where there is nothing to importune, urge, or provoke the will to any act, there is so much an higher and perfecter degree of *freedom* about that act.—*South, Sermons.*

5. Unrestraint.

I will that all the feasts and sabbaths shall be all days of immunity and *freedom* for the Jews in my realm.—*1 Maccabees*, x. 34.

And not inchanted, or by fate constrain'd.
Sir J. Davies.

Freéhold. *s.* See extract.

That land or tenement which a man holdeth in fee, fee-tail, or for term of life. *Freehold* in deed is the real possession of lands or tenements in fee, fee-tail, or for life. *Freehold* in law is the right that a man has to such land or tenements before his entry or seisure. *Freehold* is sometimes taken in opposition to villenage. Land, in the time of the Saxons, was called either bockland, that is, holden by book or writing, or folkland, that is, holden without writing. The former was held by far better conditions, and by the better sort of tenants, as noblemen and gentlemen, being such as we now call *freehold.* The latter was commonly in the possession of clowns, being that which we now call at the will of the lord.—*Cowell.*

No alienation of lands holden in chief should be available, touching the *freehold* or inheritance thereof, but only where it were made by matter of record.—*Bacon, Office of Alienation.*

There is an unspeakable pleasure in calling any thing one's own: a *freehold*, though it be but in ice and snow, will make the owner pleased in the possession, and stout in the defence of it.—*Addison, Freeholder.*

My friends here are very few, and fixed to the *freehold* from whence nothing but death will remove them.—*Swift.*

I should be glad to possess a *freehold* that could not be taken from me by any law to which I did not give consent.—*Id.*

Freéholder. *s.* One who has a freehold.

As extortion did banish the old English *freeholder*, who could not live but under the law; so the law did banish the Irish lord, who could not live but by extortion.—*Sir J. Davies, Discourse on the State of Ireland.*

By the ancient laws of Scotland *freeholders* were called Milites; and *freehold* in this kingdom has been sometimes taken in opposition to villenage, it being lands in the hands of the gentry and better sort of tenants by certain tenure, who were always *freeholders*, contrary to what was in the possession of the inferior people, held at the will of the lord.—*Jacob, Law Dictionary.*

Freély. *adv.* In a free manner.

1. At liberty; without vassalage; without slavery; without dependence or restraint; heartily; with full gust.

Freéman. *s.*

Freemartin [is] a name given by breeders to a twin cow calf born with a bull calf, which generally proves an hermaphrodite, and therefore barren; but in some cases there is not this admixture of the different sexes, or those of the female prevailing, she is capable of breeding.—*C. W. Johnson, Farmer's Encyclopædia.*

Freémason. *s.* Member of a certain secret or mysterious society, supposed to have been originally a guild of architects, builders, or masons.

This apparently simultaneous outburst, and the universal promulgation of the principles, rules, and practice of the Gothic architecture, has been accounted for by the existence of a vast secret guild of *freemasons*, or of architects. Of this guild, either connected with or latent in the monasteries and among the clergy, some of whom were men of profound architectural science, and held in their pay and in their subservience all who were not ecclesiastics, it is said, the centre, the quickening, and governing power was in Rome. Certainly of all developments of the papal influence and wisdom none could be more extraordinary than this summoning into being, this conception, this completion of these marvellous buildings in every part of Latin Christendom. But it is fatal to this theory that Rome is the city in which Gothic architecture, which some have strangely called the one absolute and exclusive Christian architecture, has never found its place; even in Italy it has at no time been more than a half-naturalised stranger. . . . All the documentary evidence adduced by Mr. Hope amounts to a papal privilege to certain builders or *masons*, or a guild of builders, at Como, published by Muratori (Como was long celebrated for its skill and devotion to the art), and a charter to certain painters by our Henry VI. Schnaase examines and rejects the theory. He cites some few instances more of guilds, but local and municipal. The first guild of *masons*, which comprehended all Germany, was of the middle of the 15th century.—*Milman, History of Latin Christianity*, b. xiv. ch. viii.

Freémasonry. *s.* System of the freemasons; (*figuratively*), understanding between different persons.

Freéthinker. *s.* One who forms his opinions independently of the authority of others: (generally applied to *latitudinarians* in religion).

Of what use is freedom of thought, if it will not produce freedom of action, which is the sole end, how remote soever in appearance, of all objections against Christianity? And therefore the *freethinkers* consider it as an edifice, wherein all the parts have such a mutual dependence on each other, that if you pull out one single nail, the whole fabrick must fall to the ground.—*Swift, Argument against abolishing Christianity.*

Although he numbered among his associates *freethinkers* and sceptics, he had a great dislike to any profane handling of sacred subjects, and always discouraged polemical discussion. One evening, when Irving and Coleridge were in company, and a young gentleman had spoken slightingly of religion, Lamb remained silent; but when the party broke up, he said to the youth who had thus annoyed his guests, 'Pray, did you come here in a hat, sir, or in a turban?'—*Talfourd, Memoirs of Lamb.*

Freéthinking. *s.* Practice or habit of freethinkers.

Are we not grown drunk and giddy with vice, and vanity, and presumption, and *freethinking*, and extravagance of every kind?—*Bishop Berkeley, Sermons*, February 18, 1731.

We see France and Italy overrun with the worst kind of deism. . . . It was brought home in a cargo of new fashions; and worn, for some time, with that levity by the importers, . . . as suited and was due to the apishness of foreign manners; till a set of solemn blockheads, grown insolent by liberty, and malicious by unsuccessful attempts towards distinction, abused the indulgence of a free government, in reducing those vague impieties into a system. And so it was, that licentious ignorance came to be distinguished with the name of *freethinking*.—*Warburton, Sermon* in 1746.

As two words, different in both *accent* and *import*, the contrast determining the former.

Freethinking signifies nothing, without freespeaking and freewriting.—*Swift, On Collins's Discourse.* (Ord MS.)

Why may not I be denied the liberty of freeseeing as well as *freethinking?* Yet, nobody pretends that the first is unlawful, for a cat may look on a king; though you be near sighted, or have weak or sore eyes, or are blind, you may be a free seer.—*Ibid.*

Freetóngued. *adj.* Accustomed to speak freely and openly.

Where ministers depend upon voluntary benevolences, if they do but, upon some just reproof, gall the conscience of a guilty hearer; or preach some truth, which disrelishes the palate of a prepossessed auditor; how he straight flies out! and not only withholds his own pay, but also withdraws the contributions of others; so as the *freetongued* preacher must either live by air, or be forced to change his pasture.—*Bishop Hall, Cases of Conscience*, D. iii. C. 7.

Freewill. *s.* [two words, except where used *adjectivally*.]

1. Power of directing our own actions without constraint by necessity or fate.

We have a power to suspend the prosecution of this or that desire: this seems to me the source of all liberty! in this seems to consist that which is improperly called *freewill*.—*Locke.*

The question, whether the law of causality applies in the same strict sense to human actions as to other phenomena, is the celebrated controversy concerning the *freedom* of the *will*. . . . The metaphysical theory of *free will*, as held by philosophers, . . . was invented because the supposed alternative of admitting human actions to be necessary, was deemed inconsistent with every one's instinctive consciousness, as well as humiliating to the pride and even degrading to the moral nature of man. . . . That the *free-will* metaphysicians, being mostly of the school which rejects Hume's and Brown's analysis of Cause and Effect, should miss their way for want of the light which that analysis affords, cannot surprise us. —*J. S. Mill, System of Logic*, b. vi. ch. ii.

2. Voluntariness; spontaneity.

I make a decree, that all they of the people of Israel in my realm, which are minded of their own *freewill* to go up to Jerusalem, go with thee.—*Ezra*, vii. 13.

Used *adjectivally*.

The basket of fruit of the juvenile Talfourd [did] not displease me; not that I have any thoughts of bartering or reciprocating these things. To send him anything in return, would be to reflect suspicion of mercenariness upon what I know he meant a *free-will* offering. Let him overcome me in bounty. In this strife a generous nature loves to be overcome.—*Lamb, Letter to Wordsworth.*

Freéwoman. *s.* Woman not enslaved.

All her ornaments are taken away; of a *freewoman* she is become a bondslave.—1 *Maccabees*, ii. 11.

Freeze. *v. n.* preterite *froze.*

1. Be congealed with cold.

The aqueous humour of the eye will not *freeze*, which is very admirable, seeing it hath the perspicuity and fluidity of common water.—*Ray, On the Wisdom of God manifested in the Works of the Creation.*

The *freezing* of water, or the blowing of a plant, returning at equidistant periods in all parts of the earth, would as well serve men to reckon their years by as the motions of the sun.—*Locke.*

2. Be of that degree of cold by which water is congealed.

Orpheus with his lute made trees
And the mountain tops, that *freeze*,
Bow themselves when he did sing.

Nor is, indeed, that man less mad than these,
Who *freights* a ship to venture on the seas;
With one frail interposing plank to save
From certain death, roll'd on by ev'ry wave.

From the participle, the barbarous words *fraught* as a verb, and *fraught* as a substantive, have been improperly formed; not to mention Fraughtage, which has been entered separately.

O ye immortal gods! nothing so difficult as to begin a chapter, and therefore have we flown to you. In literature, as in life, it is the first step—you know the rest. After a paragraph or so, our blood is up, and even our jaded hackneys scud along, and warm up into *friskiness.*—*Disraeli the younger, The Young Duke*, b. iv. ch. ix.

Frisking. *verbal abs.* Frolicsome dancing; wild gaiety.

A[illegible] was killed by a fall from a cherry-tree then.

Frit. *s.* [?] In *Pottery.* Mass for making the paste.

There are two kinds of porcelain ... the one is called hard, the other tender.... Hard porcelain is essentially composed ... of a natural clay containing some silica, infusible, and preserving its whiteness in heat. ... Tender porcelain, styled also vitreous porcelain, ... always consists of a vitreous *frit*, rendered opaque and less fusible by the addition of a calcareous or marly clay.... Tender porcelain, or soft china-ware, is made with a vitreous *frit*, rendered less fusible and opaque by an addition of white marl or bone-ash. The *frit* is, therefore, first prepared. This, at Sèvres, is a composition, made with some nitre, a little sea salt, Alicant barilla, alum, gypsum, and much siliceous sand or ground flints. That mixture is subjected to an incipient pasty fusion in a furnace, where it is stirred about to blend the materials well; and thus a very white spongy *frit* is obtained. It is pulverized, and to every three parts of it one of the white marl of Argenteuil is added; and when the whole are well ground, and intimately mixed, the paste of tender porcelain is formed.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Frith. *s.* [Norse. From its prevalence and import in Scotland, where it is chiefly used as a geographical term, and oftenest as a *proper* rather than a *common* name, probably Norwegian rather than Danish.

Firth is at least an equally common term. In both Denmark and Norway—in the latter country more especially, from the character of its seaboard, *fjörd* means an arm of the sea. In the *Firth* of *Forth*, we have the same word with different meanings; the river in general being first called the *Forth*, and its outlet the *Firth*. Similarly, a part of the *Trent* is sometimes called the *Humber*; the latter word properly applying to the salt part of the river only. The Irish *fords*, when parts of the sea, as Wex*ford*, Water*ford*, Carling*ford*, Strang*ford*, give the same word. So do Haver*ford* and Mil*ford*, in Wales. When applied to a marine inlet, so as to correspond in *meaning* with the Latin *fretum* rather than with the Latin *vadum* (the equivalent of which is the *ford* in the *English* sense, i.e. a passage by *wading* across an *inland* water), it is the sign of Norse occupancy; Danish or Norwegian, as the case may be. Its relation to *fretum* is uncertain. The fact of its beginning with *f* indicates a *derivative*, rather than a *concurrent*, origin; i.e. a relation like that of *fiscal* to *fiscus*. But its use in a country so little acted on by Latin influences as Norway, is against this. On the other, if it be a concurrent form, the Latin form should begin with *p*, as *piscis*, *pater*, &c. in comparison with *fish*; *father*, &c. With *portus* it agrees in respect to the letter-change; but the relation of *portus* = harbour to *porta* = gate, and other congeners, invalidate this view. That the Latin *fretum* was borrowed by the Latins from the Germans, is difficult to maintain. Meanwhile the doctrine that the likeness is *accidental* is the last one which should be resorted to.] Strait of the sea.

What desperate madman then would venture o'er
The *frith*, or haul his cables from the shore.
Dryden, Translation of Virgil.

Frith. *s.* [This word, as distinguished from the preceding, applies to *land* rather than water. Johnson explains it 'a field taken out of a common.' Halliwell as 'unused pasture land, a field taken from a wood, young underwood, brushwood.' The combinations '*frith* and fell,' 'forest and *frythes*,' either connect it with, or oppose it to, hills and woodlands. The word is used both in Wales and Ireland. Wedgwood, after noting this, connects it (not overlooking the Gaelic *frith*) with the French *friche*, in *bois en friche* = wood newly lopped and let stand till it be grown again; *terre en friche* = land untilled or neglected, whereby it becomes overgrown with shrubs and weeds. It seems, indeed, to be of Norman origin, and to belong to the management of forests, denoting the underwood left after a felling or cutting. Like *firth* as applied to water, it has become a geographical rather than a common term.]

Over holt and heath, as thorough *frith* and fell.
Drayton, Polyolbion, song 11.

The Sylvans that about the neighbouring woods
did dwell,
Both in the tufty *frith* and in the mossy fell.

Maids, *fritters* and pancakes ynow see ye make;
Let Slut have one pancake for company sake.
Tusser, Hundred Points of Good Husbandry.

There is no difficulty in making good omelets, pancakes, or *fritters*, and, as they may be expeditiously prepared and served, they are often a very convenient resource when, on short notice, an addition is required to a dinner. The eggs for all of them should be well and lightly whisked; the lard for frying batter should be extremely pure in flavour, and quite hot when the *fritters* are dropped in; the latter itself should be as smooth as cream, and it should be briskly beaten the instant before it is used. All fried pastes should be perfectly drained from the fat before they are served, and sent to table promptly when they are ready.—*E. Acton, Modern Cookery*, ch. xix.

Fritter. *s.* Fragment; small piece.

2. Break up into frivolities: (with *away*).

Here was one who never resisted any temptation; never had a desire but he coddled it and pampered it; if ever he had any nerve *frittered* it *away* among cooks and tailors, and barbers, and furniture mongers, and opera dancers. What muscle would not grow flaccid in such a life—a life that was never strung up to any action—an endless Capua without any campaign; all fiddling, and flowers, and feasting, and folly, and flattery.—*Thackeray, The Four Georges, George IV.*

She went to Colnaghi's and ordered the finest portrait of him that art had produced, and credit would supply. She chose that famous one in which the best of monarchs is represented in a *frock-coat* with a fur collar, and breeches and silk stockings, simpering on a sofa from under his curly brown wig.—*Thackeray, Vanity Fair.*

Frógfish. *s.* British fish so called, Lophius piscatorius; sea-devil; fishing-frog; angler; in Scotland, wide-gab.

This fish, which is not uncommon in all the seas of Europe, and was in consequence called 'Lophius Europæus' by Shaw, has also been called frog and *frogfish* from the earliest time, from its resemblance to a frog in the tadpole state. Its habits appeared to the fishermen of former days so exact a representation of the art they themselves practised, that they by common consent called it the 'fisher.' Aristotle calls it a sort of frog, which he says is also called a Fisher; and he adds, that this fish owes its name to the tact and industry it exercises to procure food.—*Yarrell, British Fishes.*

From. *prep.* [This is the preposition upon which a remark has already been made under En-, viz., that, unlike the others (go *in,* run *up,* &c.), it never has an adverbial construction; in other words, is exclusively prepositional, never adverbial.

In form, too, it is peculiar. It is one of the few prepositions which contain more than two consonants, as may be seen by contrasting it with *in, up, til,* and others.

It, probably, owes its exclusively prepositional character to the existence of the concurrent word *forth,* which, with a closely allied meaning, is exclusively adverbial, never prepositional.

Its length it owes to the fact of its being *derived* rather than a *simple* word; the *-m* being no part of the root, and its analysis being *fr* + *m.*

The *-m* is the *-m-* in Former.

The *fr-* is the *f-r-* in the same word, as, also, in Fore and For; in Latin *pro* and *præ*; in Greek προ.

The simple form *fro,* common enough with its present ordinary import in the older writers, is *now* only found in the expression *to and fro.* In Swedish it becomes *-n,* giving *från*; in Danish, it is simply *fra.*

In German it is superseded by *von,* a preposition non-existent in English; being used in German only as an adverb, i.e. as *forth* or *forward.*

All its meanings may, like those of *for,* be deduced from the notion of anteriority or beforeness; only, in *for,* while we abstract the notion of *substitution* or *equivalence,* in *from* we abstract that of *separation removal,* or *departure*; *pro*-ceeding or *pro*-jection. Hence, it corresponds with the French *de,* which, though usually connected with the genitive case, is really *ablative,* denoting *taking away* from anything. See Of.

Its genuine signification best shows itself when it is connected with *to*; in which case we have not only the point of departure (*terminus a quo*), but the point of arrival (*terminus ad quem*), as, 'He went *from* London *to* York.' In this sense it is applied to immaterial as well as material extremes.

'These notions we must examine *from* first *to* last, to find out what was the form of the earth.' (T. Burnet, Theory of the Earth.)

Hence it denotes—]

Love's *fuellers*, and the rightest company
Of players. *Donne, Poems*, p. 258.

Contention is a fire, backbiters are *fuellers*, which take it for their office and work to expell and keep away brotherly love from among men; such incendiaries they are, that if it were in their power, they would set the whole world on fire.—*Cleaver, Proverbs*, p. 415. (Ord MS.)

Of the laborious and mercantile part of the people, the diction is in a great measure casual and mutable; many of their terms are formed for some temporary or local convenience, and, though current at certain times and places, are in others utterly unknown. This *fugitive* cant, which is always in a state of increase or decay, cannot be regarded as any part of the durable materials of a language, and therefore must be suffered to perish with other things unworthy of preservation.—*Johnson, Preface to Dictionary.*

Fúgitive. *s.* One who runs from his station or duty; one who takes shelter under another power to avoid punishment; runaway; one hard to be caught or detained.

Unmarried men are best friends, best masters, best servants, but not always best subjects; for they are light to run away, and almost all *fugitives* are of that condition.—*Bacon, Essays, On Marriage and single Life.*

Fúgleman. *s.* [German direct, *flügelmann* = soldier on the *flügel*; which, in this case, means one side (*one* out of two) of a company marching or on drill. Its origin belongs rather to the Chase than the Army, in which last the plural *flügeln* has the same import as *wings* in English; i.e. it applies to *two* large bodies of men. The *flügelmeister*, however, in *Hunting* is the director of the scouts and markers that move on the side of the sportsman. In English, the *-l-* has been dropped, and is not likely to be readmitted.] Leader of a file; one who acts as a guide to the soldiers in the movements of the drill; leader, regulator, or director, in general.

Fúlcrum. *s.* pl. *fulcra.* [Lat. = prop.] In *Mechanics.* That part of a lever from which the motive power is transmitted to parts to be moved.

As the lever is generally applied to lift or sustain weights by means of a power and *fulcrum*, or prop, it has taken different names, from a difference in their relative situations. It is called a lever of the first kind when the *fulcrum* is between the power and the weight. When you stir the fire with a poker, you make use of this lever. The poker is the lever, it rests upon one of the bars of the grate as a *fulcrum*; the incumbent fire is the weight to be overcome; and the hand at the other end is the power.—*Adams.* (Ord MS.)

But it must suffice for the present to say again, ... that as the inability to conceive the negation of a belief implies the agreement of all past experience in its support; and as no belief whatever of which human nature is capable can have any higher warrant than this; we are justified in holding as valid, all such of Realism's propositions as have the Universal Postulate for their guarantee:—knowing that the essential elements of its creed can never be shaken, from want of a *fulcrum*; and not admitting the hypothetical possibility that some elements of its creed may yet be shaken to have any weight.—*Herbert Spencer, Principles of Psychology*, ch. i.

Even this, however, acts on some bright substances, a disadvantage attending most *fumigations.—Ure, Dictionary of Arts, Manufactures, and Mines.* (Hunt.)

Fúnction. *s.* [Lat. *functio*, *-onis*; *functus*, pret. part. of *fungor* = discharge a duty.]

1. Duty; employment; office; business; craft; vocation; calling; occupation, either generally or with application to any particular act.

The ministry is not now bound to any one tribe: now none is secluded from that *function* of any degree, state, or calling.—*Archbishop Whitgift.*

Without difference those *functions* cannot, in orderly sort, be executed.—*Hooker, Ecclesiastical Polity.*

Follow your *function*, go, and batten on cold bits.—*Shakespear, Coriolanus*, iv. 5.

This double *function* of the goddess gives a considerable light and beauty to the ode which Horace has addressed to her.—*Addison.*

Let not these indignities discourage us from asserting the just privileges and pre-eminence of our holy *function* and character.—*Bishop Atterbury.*

They have several offices and prayers against fire, tempests, and especially for the dead, in which *functions* they use sacerdotal garments.—*Bishop Stillingfleet.*

The bodies of men, and other animals, are excellently well fitted for life and motion; and the several parts of them well adapted to their particular *functions.—Bentley, Sermons.*

Had the report stopped here, those who drew it up might justly have been blamed for the unfair and ill natured manner in which they had discharged their *functions*; but they could not have been accused of usurping *functions* which did not belong to them for the purpose of insulting the sovereign and exasperating the nation.—*Macaulay, History of England*, ch. xxv.

For a long period preceding the Reformation, it may be almost said, there was no formal theory on the subject of private judgment, nor for some time after it; in such a matter, practice, according to the order of nature, precedes speculation. Yet there has always been a certain relation between the individuality of man, and his position and *functions* as a member of the Church, in which relation the subject of private judgment is essentially involved.—*Gladstone, The State in its Relations with the Church*, ch. vii.

2. Discharge or performance of the same.

There is hardly a greater difference between two things than there is between a representing commoner in the *function* of his publick calling, and the same person in common life.—*Swift.*

3. In *Medicine.* Share taken by the different parts of the body in the growth and action of the living and healthy organism, whether animal or vegetable: (the chief object of investigation in *Physiology*, as contrasted with *structure* the chief object in *Anatomy*).

Diseases of the auricle, especially erysipelatous inflammation extending to it, and boils, may impair the *function* of hearing, but never in a remarkable manner, nor permanently, unless they have extended to internal parts.—*Copland, Dictionary of Practical Medicine, Hearing.*

Sudden shocks, fright, terror, violent fits of anger, anxiety, grief, sadness, nostalgia, amorous affections, —all not merely affect the *functions* of the heart in a very remarkable manner, but sometimes also alter its structure.—*Ibid., Heart.*

That *function* takes precedence of structure, seems also implied in the definition of life. If life consists of inner actions so adjusted as to balance outer actions—if the actions are the substance of life, while the adjustment of them constitutes its form; then, may we not say that the actions to be formed must come before that which forms them—that the continuous change which is the basis of *function*, must come before the structure which brings *function* into shape? Or again, . . . since the accompanying new complexity of structure is simply a means of making possible this better adjustment; it follows that *function* is from beginning to end the determining cause of structure. Not only is this manifestly true where the modification of structure arises by reaction from modification of *function*; but it is also true where a modification of structure otherwise produced, apparently initiates a modification of *function.—Herbert Spencer, Inductions of Biology.*

4. In *Arithmetic.* Result of certain, or formal, arrangements of, and operations on, numbers. See extract.

Two different numbers cannot be formed in the same manner from the same numbers; but they may be formed in the same manner from different numbers; as nine is formed from three by multiplying it into itself, and sixteen is formed from four by the same process. Thus there arises a classification of modes of formation, or, in the language commonly used by mathematicians, a classification of *functions.* Any number, considered as formed from any other number, is called a *function* of it; and there are as many kinds of *functions* as there are modes of formation. The simple *functions* are by no means numerous, most *functions* being formed by the combination of several of the operations which form simple *functions*, or by successive repetitions of some one of those operations. . . . In order to carry on general reasonings on the subject of *functions*, we require a nomenclature enabling us to express any two numbers by names which, without specifying what particular numbers they are, shall show what *function* each is of the other; or in other words, shall put in evidence their mode of formation from one another. The system of general language called alegebraical notation does this. The expressions a and a^2+3a denote, the one any number, the other the number formed from it in a particular manner. The expressions a, b, n, and $(a+b)^n$ denote any three numbers, and a fourth which is formed from them in a certain mode. The following may be stated as the general problem of the algebraical calculus: F being a certain *function* of a given number, to find what *function* F will be of any *function* of that number. For example, a binomial $a+b$ is a *function* of its two parts a and b, and the parts are, in their turn, *functions* of $a+b$: now $(a+b)^n$ is a certain *function* of the binomial; what *function* will this be of a and b, the two parts? The answer to this question is the binomial theorem. . . . The resolution of equations is, therefore, a mere variety of the general problem as above stated. The problem is—given a *function*, what *function* is it of some other *function*? And in the resolution of an equation, the question is, to find what *function* of one of its own *functions* the number itself is.—*J. S. Mill, System of Logic*, iii. xxiii. § 6.

Fúnctional. *adj.* Relating to, connected with, or consisting in, a function: (one of its chief applications is in *Medicine*, where it is opposed to *organic* or *structural*, and denotes impaired action rather than change of structure in the part or organ to which it refers).

That pain in the head is often merely an indication of *functional* disorder, or of altered sensibility of the ganglial nerves distributed to the head, must be generally admitted.—*Copland, Dictionary of Practical Medicine, Headache.*

In these cases, the disorder must, in the present state of our knowledge, be viewed as purely *functional*, or nervous, or dynamico-vital, as termed by various writers; and it may, without much stretch of ingenuity, be chiefly referred either to impaired or to excessive action.—*Ibid., Heart.*

Fúnctionally. *adv.* In a functional manner.

The organ is said to be *functionally* disordered.—*Lawrence, Lectures*, ii.

Fúnctionary. *s.* One who has any particular duty to discharge; one invested with any office; official: (common as the word is now, no example of it is given in the previous editions).

Finally, we may draw from these particulars in his history, an inference suggested also by the diaries recently published of his two predecessors, Lord King and Lord Cowper, that the importance of the Chancellor in former times was far inferior to that which this high *functionary* now enjoys.—*Lord Brougham, Historical Sketches of Statesmen during the Reign of George III., Earl Camden.*

It would be most pernicious to open the House of Commons to all placemen, and not less pernicious to close that House against all placemen. To draw with precision the line between those who ought to be admitted and those who ought to be excluded would be a task requiring much time, thought, and knowledge of details. But the general principles which ought to guide us are obvious. The multitude of subordinate *functionaries* ought to be excluded. A few *functionaries*, who are at the head or near the head of the great departments of the administration, ought to be admitted. The subordinate *functionaries* ought to be excluded, because their admission would at once lower the character of Parliament and destroy the efficiency of every public office. They are now excluded; and the consequence is that the State possesses a valuable body of servants who remain unchanged while cabinet after cabinet is formed and dissolved, who instruct minister after minister in his duties, and with whom it is the most sacred point of honour to give true information, sincere advice, and strenuous assistance to their superior for the time being.—*Macaulay, History of England*, ch. xix.

On the establishment of Christianity, as the religion if not of the empire, of the emperor, the Bishop of Rome rises at once to the rank of a great accredited *functionary*; the bishops gradually, though still slowly, assume the life of individual character.—*Milman, History of Latin Christianity*, b. i. ch. ii.

The decisions of an executive body may, therefore, be expected to carry more weight, to command more respect, and to be more in accordance with general sentiment, than those of a single *functionary*, and thus to meet with more ready obedience from the community.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. vii.

Fund. *s.* [Fr. *fond*; Lat. *fundus* = farm.]

1. Stock; capital; that by which any expense is supported.

He touches the passions more delicately than Ovid, and performs all this out of his own *fund*, without diving into the arts and sciences for a supply.—*Dryden.*

Part must be left, a *fund* when foes invade,
And part employ'd to roll the watry tide. *Id.*

In preaching, no men succeed better than those who trust entirely to the stock or *fund* of their own reason, advanced indeed, but not overlaid by commerce with books.—*Swift.*

At the same time he filled another post, which, if not among the highest in the state, was one of the most important in the eyes of the people; the treasurership of the theoric *fund*, which, as Æschines takes great pains to prove, involved a large share in the general controul and direction of the finances.—*Bishop Thirlwall, History of Greece*, ch. lvi.

2. Stock or bank of money.

As my estate has been hitherto either tost upon seas, or fluctuating in *funds*, it is now fixed in substantial acres.—*Addison.*

3. *Plural, with the Definite Article*, i.e. *The Funds.* That portion of the National Debt which is not terminable; public stocks relating to the same.

In the beginning of the *funding* system, the term *fund* meant the taxes or *funds* appropriated to the discharge of the principal and interest of loans; those who held government securities, and sold them to others, selling, of course, a corresponding claim upon some *fund*. . . . During the reigns of William III. and Anne, the interest stipulated for loans was very various. But in the reign of George II. a different practice was adopted. Instead of varying the interest of the loan according to the state of the money market at the time, the interest was fixed at three and a half per cent.; the necessary variation being made in the principal *funded*.—*M'Culloch, Dictionary of Commerce.*

Fund. *v. a.* Place money in the funds.
(For example see extract under Funds.)

Fúndament. *s.* [Lat. *fundamentum.*] Hinder part of the body.

The angry beast did straight resent
The wrong done to his *fundament*,
Began to k. . k, &c. *Butler, Hudibras*, i. ii. 846.

Fundaméntal. *adj.* Having the character of, or serving for, a foundation; that upon which the rest is built; essential; important; not merely accidental.

Until this can be agreed upon, one main and *fundamental* cause of the most grievous war is not like to be taken from the earth.—*Sir W. Raleigh, Essays.*

Others, when they were brought to allow the throne vacant, thought the succession should go to the next heir, according to the *fundamental* laws of the kingdom, as if the last king were actually dead.—*Swift, Examiner.*

Such we find they are, as can controul
The servile actions of our wav'ring soul,
Can fright, can alter, or can chain the will;
Their ills all built on life, that *fundamental* ill.
Prior.

Yet some there were among the sounder few,
Of those who less presum'd and better knew,
Who durst assert the juster ancient cause,
And here restor'd wit's *fundamental* laws.
Pope, Essay on Criticism, pt. iii.
(See also last extract under next entry.)

Fundaméntal. *s.* Leading proposition; important and essential part of any doctrine (generally *theological*) which is the groundwork of the rest.

We propose the question, whether those who hold the *fundamentals* of faith may deny Christ damnably in respect of superstructures and consequences that arise from them.—*South, Sermons.*

It is a very just reproach, that there should be so much violence and hatred in religious matters among men who agree in all *fundamentals*, and only differ in some ceremonies, or mere speculative points.—*Swift.*

An additional support of the doctrines of an infallible universal church, and of an authoritative church-tradition, is sought to be derived from the distinction between *fundamentals* and non-*fundamentals*, or (in other words,) between matters of faith, to be held de fide, and matters of mere opinion. It is affirmed, that the authority of the true church, and of church-tradition, is decisive with respect to *fundamentals* and matters of faith, but that, in other things, entire agreement is not necessary; so that a Christian who rejects any of the latter, does not incur the sin of heresy. But here, again, the difficulty is merely shifted, not solved; it is transferred to another point, but it is not diminished. There is no received or certain test for distinguishing between *fundamental* and non-*fundamental* doctrines.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. iv.

Fundamentálity. *s.* Character of being Fundamental.

That upon every point, small and great, he must surrender, it is not necessary for the general purpose to contend; but where he finds antiquity and universality combined with *fundamentality*, the conclusion is inevitable, and, in proportion as he finds the evidence of each of those three conditions, is it plainly legitimate.—*Gladstone, The State in its Relations with the Church*, ch. vii.

Fundaméntally. *adv.* In a fundamental manner; with the character of a foundation; essentially; originally.

As virtue is seated *fundamentally* in the intellect, so perspectively in the fancy; so that virtue is the force of reason, in the conduct of our actions and passions to a good end.—*Grew.*

Religion is not only useful to civil society, but *fundamentally* necessary to its very birth and constitution.—*Bentley.*

The unlimited power placed *fundamentally* in the body of a people, the legislators endeavour to deposite in such hands as would preserve the people.—*Swift.*

Fúnded. *part. adj.* Placed (as money) in the Funds.

This was the beginning of the *funded* debt.—*M'Culloch, Dictionary of Commerce.*

Fúndholder. *s.* One who has money invested in the funds.

From this passage we should have been inclined to think... the dividends to be a free gift periodically sent down from heaven to the *fundholders*, as quails and manna were sent to the Israelites. . . . A *fundholder*, we will suppose, spends dividends amounting to five hundred pounds a year; and his ten nearest neighbours pay fifty pounds each to the tax-gatherer, for the purpose of discharging the interest of the national debt. If the debt were wiped out, a measure, be it understood, which we by no means recommend, the *fundholder* would cease to spend his five hundred pounds a year. He would no longer give employment to industry, or put food into the mouths of labourers. . . . Each of the ten neighbours of our *fundholder* has fifty pounds a year more than formerly. Each of them will, as it seems to our feeble understandings, employ more industry and feed more mouths than formerly. The sum is exactly the same. It is in different hands.—*Macaulay, Critical and Historical Essays, Southey's Colloquies on Society.*

Fúnding. *verbal abs.* Putting into the funds, placing in the condition of a funded debt. See Fund.

Funds. *s. plur.* See Fund.

Funébrial. *adj.* [Lat. *funebris.*] Belonging to funerals; solemn; melancholy, funereal. *Rare.*

Their garlands . . . were convivial, festival, sacrificial, nuptial, honorary, *funebrial*.—*Sir T. Browne, Miscellanies*, p. 91.

On the other hand, it was unquestionable that their object must have been a legitimate union: and such a hasty and *furtive* ceremony as they asserted to have taken place, while it would, if sufficiently proved, be completely valid, was necessary to protect them from the queen's indignation.—*Hallam, History of England*, ch. vi.

Fúruncle. *s.* [Fr. *furoncle*; Lat. *furunculus.*] In *Medicine.* Boil.

A *furuncle* is in its beginning round, hard, and inflamed; and as it increaseth, it riseth up with an acute head, and sometimes a pustule; and then it is more inflamed and painful, when it arrives at its state, which is about the eighth or ninth day.—*Wiseman, Surgery.*

The true skin or corion is penetrated by small conical prolongations derived from the cellular tissue underneath. With these, the vessels and nerves proceed to the superficies of the corion to form the papillar tissue and vascular rete. When inflammation commences in one or more of these prolongations, *furunculus* or boil, hordeolum or sty, and anthrax or carbuncle, are the results.... The varieties of *furuncle* are generally dependent upon disordered states of the digestive functions, and the characters which they assume vary with the states of vital action and of the circulating fluids.—*Copland, Dictionary of Practical Medicine.*

Fúry. *s.* [Fr. *furie*; Lat. *furor*, a common word, though less like the word under notice in respect to its *form* than *Furia* the rare, or hypothetical, singular of the Latin *Furiæ* = Furies, i.e. three heathen female deities so named. The details of the confusion are obscure. Probably, though it would savour of a refinement to make separate entries, they are, in reality, two distinct words.]

1. Rage; passion of anger; tumult of mind approaching to madness.

I do oppose
My patience to his *fury*; and am arm'd
To suffer with a quietness of spirit
The very tyranny and rage of his.
Shakespear, Merchant of Venice, iv. 1.

He hath given me to know the natures of living creatures, and the *furies* of wild beasts.—*Apocrypha, Wisdom*, vii. 20.

2. Enthusiasm; exaltation of fancy.

Taking up the lute, her wit began to be with a divine *fury* inspired; and her voice would, in so beloved an occasion, second her wit.—*Sir P. Sidney.*

A sybil that had number'd in the world
The sun to course two hundred compasses,
In her prophetick *fury* sew'd the work.
Shakespear, Othello, iii. 4.

Greater than human kind she seem'd to look,
And with an accent more than mortal spoke;
Her staring eyes with sparkling *fury* roll,
When all the god came rushing on her soul.
Dryden, Translation of the Æneid.

3. One of the Furies; termagant woman.

The sight of any of the house of York,
Is as a *fury* to torment my soul.
Shakespear, Henry VI. Part III. i. 3.

It was the most proper place for a *fury* to make her exit; and I believe every reader's imagination is pleas'd when he sees the angry goddess thus sinking in a tempest, and plunging herself into hell, amidst such a scene of horror and confusion.—*Addison, Travels in Italy.*

Furze. *s.* old plural in *-n.* [see Gorse.] Native plant so called; gorse (Ulex europæus).

Carry out gravel to fill up a hole,
Both timber and *furzin*, the turf and the cole.
Tusser, Hundred Points of good Husbandry.

For fewel, there groweth great store of *furze*, of which the shrubby sort is called tame, and the better grown French.—*Carew, Survey of Cornwall.*

We may know,
And when to reap the grain, and when to sow,
Or when to fell the *furzes*.
Dryden, Translation of Virgil.

Many thousands of square miles which are now rich corn land and meadow, intersected by green hedge-rows, and dotted with villages and pleasant country seats, would appear as moors overgrown with *furze*, or fens abandoned to wild ducks.—*Macaulay, History of England*, ch. iii.

Fúrzen. *adj.* Made of, relating to, or consisting in, furze.

For we must not alwaies choose that which is easie to be had and willing to be gotten; for we put by gorse and *furzen* bushes; we tread underfoot briers and brambles, though they catch hold of us.—*Holland, Translation of Plutarch*, p. 186. (Rich.)

Fúrzy. *adj.* Abounding in, or overgrown with, furze.

Wide through the *furzy* field their route they take,
Their bleeding bosoms force the thorny brake. *Gay.*

(For example see last extract under Fusibility).

Fuse. *s.* Fusee.

The blasting, or shooting, tools are a sledge, or mallet; claying bar; needle or nail; scraper; tamping-bar; borer. Besides these tools the miner requires a powder-horn, rushes to be filled with gunpowder, tin cartridges for occasional use in wet ground, and paper rubbed over with gunpowder or grease for the snifts or *fuses.*—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Fuseé. *s.* [from Fr. *fusée* = squib, cartridge.] Instrument of the nature of a train for firing an explosive: (Fuse *commoner*).

Fusee of a bomb or granado shell, is that which makes the whole powder or composition in the shell take fire, to do the designed execution. 'Tis usually a wooden pipe or tap filled with wildfire, or some such matter; and is intended to burn no longer than is the time of the motion of the bomb from the mouth of the mortar to the place where it is to fall, which time Anderson makes twenty-seven seconds.—*Harris.*

Fuseé. *s.* [Fr. *fuseau* = spindle.] Cone round which is wound the cord or chain of a clock or watch.

The reason of the motion of the balance is by the motion of the next wheel, and that by the motion of the next, and that by the motion of the *fusee*, and that by the motion of the spring: the whole frame of the watch carries a reasonableness in it, the passive impression of the intellectual idea that was in the artist.—*Sir M. Hale, Origination of Mankind.*

Fúsel (Fusel oil). *s.* [German direct.] Strong and somewhat fetid spirit from the distillation of potatoes.

This compound has long been known under the name of oil of potato-spirit; it is the *fusel* oil of the Germans.—*Brande, Manual of Chemistry*, p. 1753.

Fúsible. *adj.* [Lat. *fusibilis*; subst. *fusibilitas, -atis*; *fusus*, pass. part. of *fundo* = pour out; *fusio, -onis.*] Capable of being fused.

Colours afforded by metalline bodies either colliquate with or otherwise penetrate into other bodies, especially *fusible* ones. — *Boyle, Experiments and Considerations touching Colours.*

(See also under next entry.)

Fusibílity. *s.* Capacity of being fused.

The ancients observing in that material a kind of metallical nature, or at least a *fusibility*, seem to have resolved it into a nobler use.—*Sir H. Wotton, Elements of Architecture.*

The bodies of most use, that are sought for out of the depths of the earth, are the metals, which are distinguished from other bodies by their weight, *fusibility*, and malleableness.—*Locke.*

It would be hardly possible to infer the melting point of an alloy from that of each of its constituent metals; but in general the *fusibility* is increased by mutual affinity in their state of combination. Of this a remarkable instance is afforded in the *fusible* metal consisting of 8 parts of bismuth, 5 of lead, and 3 of tin, which melts at the heat of boiling water of 212° Fahr., though the melting point deduced from the mean of its components should be 514°. This alloy may be rendered still more *fusible* by adding a very little mercury to it, when it forms an excellent material for certain anatomical injections, and for filling the hollows of carious teeth. Nor do the colours of alloys depend, in any considerable degree, upon those of the separate metals; thus the colour of copper, instead of being rendered paler by a large addition of zinc, is thereby converted into the rich-looking pinchbeck metal. By means of alloys we multiply, as it were, the numbers of useful metals, and sometimes give usefulness to such as are separately of little value. Since these compounds can be formed only by fusion, and since many metals are apt to oxidize readily at their melting temperature, proper precautions must be taken in making alloys to prevent this occurrence, which is incompatible with their formation. — *Ure, Dictionary of Arts, Manufactures, and Mines.*

Hutton, in his speculations concerning the geological effects of heat, naturally availed himself of the laws which Black had unfolded. One of those laws was, that certain earths owe their *fusibility* to the presence of fixed air in them before heat has expelled it; so that, if it were possible to force them to retain their fixed air, or carbonic acid gas, as we now call it, no amount of heat could deprive them of the capability of being *fused.*—*Buckle, History of Civilization in England*, vol. ii. ch. vi.

Fusíl. *s.* [Fr. *fusil* = steel for tinderbox; Lat. *focile*, from *focus* = hearth.] Matchlock; firelock gun; musket.

The *fusils* intended for officers are generally mounted with silver.—*Rees, Cyclopædia*, in voce.

Fusíl. *s.* [Fr. *fuseau* = spindle.] In *Heraldry.* Spindle-shaped element of a blazon so called.

Fusils must be made long, and small in the middle; in the ancient coat of Montague, argent three *fusils* in fesse gules.—*Peacham, On Blazoning.*

Fúsile. *adj.*

1. Capable of being fused.

Some, less skilful, fancy these scapi that occur in most of the larger Gothick buildings of England are artificial: and will have it, that they are a kind of *fusil* marble.—*Woodward, Essay towards a Natural History of the Earth.*

2. Fused; melted; liquefied.

The liquid ore he drain'd
Into fit moulds prepar'd; from which he form'd
First his own tools: then, what might else be wrought
Fusile, or grav'n in metal.
Milton, Paradise Lost, xi. 570.

Perpetual flames,
O'er sand and ashes, and the stubborn flint,
Prevailing, turn into a *fusil* sea.
J. Philips, Cyder, b. ii.

Fusileér. *s.* Soldier armed with a fusil; musketeer.

Fúsion. *s.* Act of fusing; state of being fused.

Metals in *fusion* do not flame, for want of a copious fume; except spelter, which fumes copiously, and thereby flames.—*Sir I. Newton, Opticks.*

Fuss. *s.* [A.S. *fús* = active.] Tumult; bustle; stir; ado.

Nor with senates keep a *fuss*:
I submit, and answer thus. *Swift.*

Here's a *fuss* indeed, about nothing.—*Fielding, Adventures of Joseph Andrews.*

I've known a dozen weddings made even thus,
And some of them high names! I have also known
Young men who—though they hated to discuss
Pretensions which they never dream'd to have shown—
Yet neither frighten'd by a female *fuss*,
Nor by mustachios moved, were let alone,
And lived, as did the broken-hearted fair,
In happier plight than if they form'd a pair.
Byron, Don Juan.

'I see old mother Dalmaine dresses her as much like the Doncaster belle as she possibly can.'—'Yes, and spoils her,' said Lord Squib 'but old mother Dalmaine, with all her *fuss*, was ever a bad cook, and overdid everything.'—*Disrael the younger, The Young Duke.*

Fust. *s.* [N.Fr. *fuste* = cask.] Trunk or body of a column. *Rare.*

Fust. *v. n.* Grow fusty.

1. Kind of cloth made of linen and cotton, and perhaps now of cotton only; see second extract.

Is supper ready, the house trimm'd, the servingmen in their new *fustian* and their white stockings? —*Shakespear, Taming of the Shrew*, iv. 1.

Fustian is a species of coarse thick twisted cotton, and is generally dyed of an olive, leaden, or other dark colour. Besides the common *fustian*, which is known by the name of pillow (probably pilau), the cotton stuffs called corduroy, velverett, velveteen, thicksett, used for men's wearing apparel, belong to the same fabric. The commonest kind is merely a tweed of four or sometimes five leaves, of a very close stout texture, and very narrow, seldom exceeding 17 or 18 inches in breadth. It is cut from the loom in half pieces, or ends as they are usually termed, about 35 yards long, and, after undergoing the subsequent operations of dyeing, dressing, and folding, is ready for the market.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

2. Bombast. See, also, Lindsy-wolsey, and Stuff.

Nor will you raise in me combustion,
By dint of high heroick *fustian*. *Butler, Hudibras.*

What hat *fustian* have I heard these gentlemen find out in Mr. Cowley's odes! In general, I will say, that nothing can appear more beautiful to me than the strength of those images which they condemn. —*Dryden.*

Fustian is thoughts and words ill sorted, and without the least relation to each other.—*Ibid.*

At first the music of our stage was rude,
Whilst in the cockpit and Blackfriars it stood;
And this might please enough in former reigns,
A thrifty, thin, and bashful audience,
When Bussy d'Ambois and his *fustian* took,
And men were ravished with Queen Gordobuc.
Oldham, Horace's Art of Poetry imitated in English.

Chance thoughts, when govern'd by the close,
Oft rise to *fustian*, or descend to prose. *Smith.*

Used *adjectivally.*

When men argue, th' greatest part
O' th' contest falls on terms of art,
Until the *fustian* stuff be spent,
And then they fall to th' argument.
Butler, Hudibras.

Virgil, if he could have seen the first verses of the Sylvæ, would have thought Statius mad in his *fustian* description of the statue on the brazen horse.—*Dryden, Translation of Du Fresnoy's Art of Painting.*

Fústianist. *s.* One who writes or admires fustian.

Preferring the gay rankness of Apuleius, Arnobius, or any modern *fustianist*, before the native Latinisms of Cicero.—*Milton, Apology for Smectymnuus.*

Fústic. *s.* [?] Sort of wood brought from the West Indies, used in dyeing cloth.

Next to galls old *fustick* increases the weight about 1½ in 12.—*Bishop Sprat, History of the Royal Society*, p. 305.

At last, Friday pitched on a tree; for I found he knew much better than I what kind of wood was fittest for it; nor can I tell, to this day, what wood to call the tree we cut down, except that it was very like the tree we call *fustic*, or between that and the Nicaragua wood, for it was much of the same colour and smell.—*Defoe, Life and Adventures of Robinson Crusoe.*

The old *fustic* of the English dyer, as the article *fustet* is their yellow *fustic*. It is the wood of the Morus tinctoria. It is light, not hard, and pale yellow with orange veins; it contains two colouring matters, one resinous, and another soluble in water. The latter resembles weld, but it has more of an orange cast, and is not so lively. Its decoctions in water are brightened by the addition of a little glue, and more by curdled milk. This wood is rich in colour, and imparts permanent dyes to woollen stuffs, when aided by proper mordants. It unites well with the blue of the indigo vat and Saxon blue in producing green of various shades. Alum, tartar, and solution of tin, render its colour more vivid; sea salt and sulphate of iron deepen its hue. From 5 to 6 parts of old *fustic* are sufficient to give a lemon colour to 16 parts of cloth. The colour of weld, is, however, purer and less inclining to orange; but that of *fustic* is less affected by acids than any other yellow dye. This wood is often employed with sulphate of iron in producing olive and brownish tints, which agree well with its dull yellow. For the same reason it is much used for dark greens.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Fústigate. *v. a.* [Lat. *fustis* = club.] Beat with club, cudgel, or stick.

Dissident priests, passing along with their sacred wafer for the dying, seem wishful to be massacred in the streets; wherein Patriotism will not gratify them. Slighter palm of martyrdom, however, shall not be denied: martyrdom not of massacre, yet of *fustigation*. At the refractory places of worship, patriot men appear: patriot women with strong hazel wands, which they apply. Shut thy eyes, O reader: see not this misery, peculiar to these later times,—of martyrdom without sincerity, with only cant and contumacy! A dead Catholic church is not allowed to lie dead; no, it is *galvanised* into the detestablest death-life; whereat Humanity, we say, shuts its eyes. For the patriot women take their hazel wands, and *fustigate*, amid laughter of bystanders, with alacrity: broad bottom of priests; alas, nuns too, reversed and cotillons retroussés!—*Carlyle, The French Revolution*, pt. ii. b. iv. ch. i.

Fustigátion. *s.* Beating with club, cudgel, or stick.

They punished such as swore falsely by their prince with *fustigation*.—*Archbishop Sancroft.*

(For another example see extract under Fustigate.)

Fústilug, or **Fústilugs.** *s.* Fustilarian. *Rare, colloquial,* or *slang.*

You may daily see such *fustilugs* walking in the streets, like so many tuns, each moving upon two pottle-pots.—*Junius, Sin Stigmatized*, p. 39: 1639.

Fústy. *adj.* Savouring, i.e. smelling or tasting, of the cask; mouldy. See Fust.

The large Achilles, at this *fusty* stuff,
From his deep chest laughs out a loud applause.
Shakespear, Troilus and Cressida, i. 3.

Hector shall have a great catch, if he knock out either of your brains: he were as good crack a *fusty* nut with no kernel.—*Ibid.* ii. 1.

The *fusty* plebeians hate thine honours.
Id., Coriolanus, i. 9.

Fútile. *adj.* [Lat. *futilis* = vain, trifling.]

1. Trifling; worthless; of no weight.

The word may have some allusion to the vessel called *futile*, used in the sacrifice of Vesta, of that narrow bottom that it could not stand, but was forced to be held up. Thus say, a man is *futile*; and, by alluding to a vessel, you call him a leaking, vain, dissolute fellow; a cracked vessel; he still runs out.—*Archbishop Wake, Rationale on Texts of Scripture*, p. 234: 1701.

The sons of earth, the vulgar crew,
Anxious for *futile* gains, beneath me stray,
And seek with erring step contentment's obvious way. *Shenstone, Ode after Sickness.*

2. Talkative; loquacious.

One *futile* person, that maketh it his glory to tell, will do more hurt than many that know it their duty to conceal.—*Bacon.*

Futility. *s.*

1. Want of weight; want of solidity.

Trifling *futility* appears in their signs of the zodiack, and their mutual relations and aspects.—*Bentley.*

But Musgrave ... saw that, if the imputations which the opposition had been in the habit of throwing on the Chancellor were exhibited with the precision of a legal charge, their *futility* would excite universal derision, and thought it more expedient to move that the House should, without assigning any reason, request the King to remove Lord Somers from his majesty's counsels and presence for ever.—*Macaulay, History of England*, ch. xxv.

2. Talkativeness; loquacity.

This fable does not strike so much at the *futility* of women, as at the incontinent levity of a prying humour.—*Sir R. L'Estrange.*

Fútilous. *adj.* Worthless; trifling. *Rare.*

I received your answer to that *futilous* pamphlet. —*Howell, Familiar Letters*, ii. 48.

God implants no instincts in his creatures that are *futilous* and vain.—*Granville, Sermons*, p. 287.

Fúture. *adj.* [Lat. *futurus*; Fr. *futur.*] About to be hereafter: (as, 'the *future* state').

Glory they sung to the most High! good will
To *future* men, and in their dwellings peace.
Milton, Paradise Lost, vii. 182.

His [Lord Camden's] decisions in the Court of Chancery ... have escaped all censure; and he was of too firm a mind, and, at the same time, too discreet and modest, to fall into the great error which shipwrecked the judicial fame of *future* equity judges, well versed in the practice of their courts. He neither ... so disliked to pronounce the opinion he had formed, as to put off the evil day of decision; ... nor did he place ... his chief praise in unhesitating and promiscuous dispatch of business, ... so as to draw from Sir Samuel Romilly the comparison, that he preferred the slow justice of the chancellor to his deputy's speedy injustice.—*Lord Brougham Historical Sketches of Statesmen of the Reign of George III., Earl Camden.*

Fúture. *s.*

1. Time to come; somewhat to happen hereafter.

The letters have transported me beyond
This ign'rant present time; and I feel now
The *future* in the instant.
Shakespear, Macbeth, i. 5

The mind, once jaded by an attempt above its power, either is disabled for the *future*, or else checks at any vigorous undertaking ever after.—*Locke.*

But such precautions as these were barely sufficient to maintain tranquillity for the present: much more was needed for the *future*.—*Bishop Thirlwall, History of Greece*, ch. lv.

2. In *Grammar.* Tense so called: (*vocabo* = I *shall*, or *will*, call, being the *future* of *voco* = I call). In the following extracts both *substantival* and *adjectival.*

Mr. Harris, in his distribution of tenses, reckons three definite *future* tenses, besides the common indefinite *future*, which he calls the aorist of the *future*, viz. the inceptive *future*, as scripturus ero, I shall be beginning to write; the middle or extended *future*, as scribens ero, I shall be writing; and the completive *future*, as scripsero, I shall have done writing.—*Rees, Cyclopædia*, in voce.

But if we are so scantily provided for this official passive adjective, we are still worse respecting the *future* adjective: for I cannot recollect a single instance of it in English except this single word *future*. Yes, one more; Venture or Adventure. Which, though it appears as a substantive, means merely (anything, something, aliquid) Venturum. Can anything be more lame and awkward than our 'about to be' and 'about to come' and 'about to do?' —*Horne Tooke, Diversions of Purley.*

Fúturely. *adv.* In time to come. *Rare.*

This prescience of God, as it is prescience, is not the cause of any thing *futurely* succeeding; neither doth God's foreknowledge impose any necessity, or bind.—*Sir W. Raleigh.*

It more imports me
Than all the actions that I have foregone,
Or *futurely* can hope.
Beaumont and Fletcher, Two Noble Kinsmen.

Futurition. *s.* State or condition of being about to be.

The time expressed denotes the *futurition* at the latter day.—*Bishop Pearson, Exposition of the Creed*, art. ii.

Is it imaginable, that the great means of the world's redemption should rest only in the number of possibilities, and hang so loose in respect of its *futurition*, as to leave the event in an equal poise, whether ever there should be such a thing or no?—*South, Sermons*, i. 285.

Futúrity. *s.*

1. Time to come.

Not my service past, nor present sorrows,
Nor purpos'd merit in *futurity*,
Can ransom me. *Shakespear, Othello*, iii. 4.

I will contrive some way to make it known to *futurity*, that I had your lordship for my patron.—*Swift.*

2. Event to come.

All *futurities* are naked before that All-seeing Eye, the sight of which is no more hindered by distance of time than the sight of an angel can be determined by distance of place.—*South.*

This, great Amphiarus, lay hid from thee,
Though skill'd in fate and dark *futurity*.
Pope, Translation of the First Book of the Thebaid of Statius.

3. State of being about to be; futurition.

It may be well reckoned among the bare possibilities, which never commence into a *futurity*; it requiring such a free, sedate and intent mind, as it may be, is no where found but among the platonical ideas.—*Glanville, Scepsis Scientifica.*

Fuzeé. *s.* [Fr. *fusée.*] In *Farriery.* Kind of splint so called. See extract.

Splent, or splint, among farriers, [is] a callous, insensible excrescence or gristle, that sometimes sticks to a horse's shank-bone, generally on the inside below the knee. If there be one opposed to it on the outside, it is called a pegged or pinned splent, because it does, as it were, pierce the bone, and is extremely dangerous. Some call this a double splent, and others a thorough splent.... *Fuzees* [are] two dangerous splents, joined from above downwards; commonly a *fuzee* rises to the knee and lames the horse. *Fuzees* differ from screws or thorough splents in this, that the latter are placed on the two opposite sides of the leg.—*Rees, Cyclopædia, Splent and Fuzee.*

Fuzz. See Fuzzy.

Fuzz. *v. a.* Same as Fuzzle.

The University troop dined with the Earl of Abingdon, and came home well *fuzzed*.—*A. Wood, Life, by himself*, p. 343.

Fuzz. *s.* Fuzzball.

FUZZ

Fúzzball. *s.* Globular kind of fungus, which, when pressed, bursts and scatters forth a fine dust.

As touching all the sorts of mushrooms, toad-stooles, puffes, *fuzbals*, or *fuzzes*, these particulars following are observed.—*Holland, Translation of Pliny*, b. xix. ch. iii. (Rich.)

Fúzzle. *v. a.* Fuddle.

Having liberally taken his liquor, my fine scholar was so *fusled*, that he was no sooner laid in bed, but he fell fast asleep.—*Burton, Anatomy of Melancholy*, p. 604.

Fúzzy. *adj.* See extract.

[*Fuzz, fuzzy.*—German *pfuschen*, Swiss *pfusen*, *pfisen*, English *fizz*, represent the sound of water flying off from a hot surface, of air and water in intimate mixture and commotion. Hence *fuzz*, having the nature of things which fizz, a frothy, spongy mass, a confused mixture of air and water, as champagne foaming out of a bottle. Prussian, *fossen*, *fossern*, to fuzz or break up into a fuzz or spongy mass of filaments. *Fuzzy* or *fozy* turnips (*voose* raepen—Kilian) are soft and spongy. A *fuzzy* outline is woolly and indistinct.—*Wedgwood, Dictionary of English Etymology.*]

FYST

Fy. *interj.* [as the German is *pfui*, this spelling is better than *fie*.] Word of blame and disapprobation.

Fy, my lord, *fy!* a soldier, and afeard? What need we fear who knows it, when none can call our power to account?—*Shakespear, Macbeth*, v. 1.

Nay, *fy*, what mean you in this open place?
Unhand me, or, I swear, I'll scratch your face:
Let go, for shame; you make me mad for spite:
My mouth's my own; and if you kiss, I'll bite.
Dryden.

Fyst. *s.* Breaking of wind from behind, so as to be smelt, rather than heard.

FYST

Demaunde: What thynges it is that the more that one drynketh . . . the lesse he shall pysse?—Response: It is fartes *fyestes*, for who that drynketh a hondred thousande they shall never pysse a drop. —*Demaundes Joyous*: 1511. (*Kemble, Solomon and Saturn.*)

[*Feist* [is] the act of breaking wind in a suppressed manner from behind. Lothians-Teutonic, *veest*, *vyst*, crepitus ventris, flatus ventris; French, *vesse*; Old English *fiest*.—*Jamieson, Dictionary of the Scottish Language.*]

This, sometimes spelt *feist*, is the origin of Foist; i.e. insinuate something which proves disagreeable, but which does not proclaim its intrusion. As it is the smell which betrays it, it is confused with *fusty*, suggestive also of a smell, but one of a different origin.

G.

GAB

GAB. *s.* Mouth; tongue (with an unfavourable meaning): (vulgarly used: as, '*Hold your gab*' = stint your talk; also, '*Gift of the gab*' = power of talk).

Gábble. *v. n.* [see Gobble.] Talk hastily and indistinctly, actually or approximately, as a goose; prate; make an inarticulate noise.

When thou could'st not, savage,
Shew thine own meaning, but would'st *gabble* like
A thing most brutish, I endow'd thy purposes
With words that made them known.
Shakespear, Tempest, i. 2.

Which made some think, when he did *gabble*,
Th' had heard three labourers of Babel;
Or Cerberus himself pronounce
A leash of languages at once. *Butler, Hudibras.*

Such a rout, and such a rabble,
Run to hear Jack Pudding *gabble*. *Swift.*

Hill, Materia Medica.*

Galangal (root) of English druggists occurs in pieces which are as thick as the finger, seldom exceeding three inches in length, cylindrical or somewhat tuberous, often forked, sometimes slightly striped longitudinally, and marked with whitish circular rings. Its odour is agreeably aromatic; its taste peppery and aromatic. It is the rhizome of Alpinia *galanga*.... Its effects, uses, and doses are analogous to ginger.—*Pereira, Elements of Materia Medica.*

Gálantine. *s.* [?] In *Cookery.* See extract.

If restored to its form, instead of being rolled, it must be stewed gently for an hour, and may then be sent to table hot, covered with mushroom, or any other good sauce that may be preferred; or it may be left until the following day, and served garnished with the jelly, which should be firm, and very clear and well-flavoured; the liquor in which the calf's foot has been boiled down, added to the broth, will give it the necessary degree of consistency. French cooks add three or four onions to these preparations of poultry (the last of which is called a *galantine*), but these our own taste would lead us to reject.—*Eliza Acton, Modern Cookery*, p. 256.

Gálaxy. *s.* [Gr. γάλα, γάλακτος = milk; Fr. *galaxie.*]

1. In *Astronomy.* The Milky Way.

A brown, for which heaven would disband
The *galaxy*, and stars be tann'd. *Cleaveland.*

Several lights will not be seen,
If there be nothing else between;
Men doubt, because they stand so thick i' th' sky,
If those be stars that paint the *galaxy*. *Cowley.*

A broad and ample road, whose dust is gold,
And pavement stars, as stars to thee appear,
Seen in the *galaxy*. *Milton, Paradise Lost*, vii. 577.

We dare not undertake to shew what advantage is brought to us by those innumerable stars in the *galaxy*.—*Bentley.*

2. Any splendid assemblage of persons or things.

There are stars of several magnitudes; some goodly and great ones, that move in orbs of their own; others small and scarce visible in the *galaxy* of the church; but all are stars, and no star is without some light.—*Bishop Hall, Remains*, p. 45.

Often has my mind hung with fondness and admiration over the crowded, yet clear and luminous, *galaxies* of imagery, diffused through the works of Bishop Taylor.—*Dr. Parr.*

In the Latin form.

Then touched with love my inward soul did cry,
Wo worth the faults and follies of mine eye!
The milk-white *galaxia* of her brow,
Where love doth dance lavoltas of his skill,
Like to the temple where true lovers vow
To follow what shall please their mistress' will.
R. Greene, Poems.

Gálbanum. *s.* [Lat. *galbanum.*] Gum resin so called, from some plant of the natural order Umbelliferæ; used in medicine as an antispasmodic.

And the Lord said unto Moses, Take unto thee sweet spices, stacte, and onchya, and *galbanum* [*khelbenah*]; these sweet spices with pure frankincense; of each shall there be a like weight: and thou shalt make it a perfume, a confection after the art of the apothecary, tempered together pure and holy.—*Exodus*, xxx. 34, 35.

I yielded indeed a pleasant odour, like the best myrrh, as *galbanum*.—*Ecclesiasticus*, xxiv. 15.

We meet with *galbanum* sometimes in loose granules, called drops or tears, which is the purest, and sometimes in large masses. It is soft, like wax, and ductile between the fingers; of a yellowish or reddish colour: its smell is strong and disagreeable. It is of a middle nature between a gum and a resin, being inflammable as a resin, and soluble in water as a gum, and will not dissolve in oil, as pure resins do. It is the produce of an umbelliferous plant.—*Sir J. Hill, Materia Medica.*

Hitherto no sufficient evidence has been adduced to prove that *galbanum* has been yielded by any known plant.... Sir John McNiell sent home specimens of a plant called a second sort of ammoniacum.... Dr. Lindley was kind enough to send me a small fragment of this gum-resin for examination; but I was unable to identify it with any other known product of the order Umbelliferæ. It certainly was neither asafœtida nor ammoniacum; nor did it appear to be either sagapenum or *galbanum*. The precise country where *galbanum* is produced has not been hitherto ascertained. Dioscorides says it is obtained in Syria: a statement which is perhaps correct, though hitherto no evidence of this has been obtained. It is not improbable that it is procured also in Persia, or even in Arabia, as suggested by Dr. Royle. Opoïdia galbanifera grows in the province of Khorasan, near Dudrood.—*Pereira, Elements of Materia Medica*, p. 1054.

Gale. *s.* [?] Wind not tempestuous, yet stronger than a breeze. See second extract.

What happy *gale*
Blows you to Padua here from old Verona?
Shakespear, Taming of the Shrew, i. 2.

Gales, or *gales* of wind, are more particularly understood by mariners to be those storms which, chiefly during winter in high latitudes, blow sometimes from one direction for several days together. —*Young, Nautical Dictionary.*

Gale. *s.* [Dutch, *gagel*; hence *gail* would be the better spelling.] Native plant so called, Myrica Gale.

Our busy streets and sylvan-walks between,
Fen, marshes, bog and heath, all intervene;
Here pits of crag, with spongy, plashy base,
To some enrich the uncultivated space:
For there are blossoms rare, and curious rush,
The *gale's* rich balm, and sun-dew's crimson blush,
Whose velvet leaf with radiant beauty dress,
Forms a gay pillow for the plover's breast.
Crabbe, The Borough.

Gáleated. *adj.* [Lat. *galea* = helmet.]

1. Covered as with a helmet.

A *galeated* echinus copped, and in shape somewhat more conick than any of the foregoing.—*Woodward, On Fossils.*

2. In *Botany*. Bearing a flower resembling a helmet, as the monkshood.

Galéna. *s.* [Gr. γαλήνη.] Ore (native sulphuret) of lead.

When a crystal, as, for instance, a crystal of *galena*, (sulphuret of lead,) is readily divisible into smaller cubes, and these into smaller ones, and so on without limit, it is very natural to represent to ourselves the original cube as really consisting of small cubical elements; and to imagine that it is a philosophical account of the physical structure of such a substance to say that it is made up of cubical molecules. And when the *galena* crystal has externally the form of a cube, there is no difficulty in such a conception; for the surface of the crystal is also conceived as made up of the surfaces of its cubical molecules. We conceive the crystal so constituted, as we conceive a wall built of bricks. But if, as often happens, the *galena* crystal be an octahedron, a further consideration is requisite in order to understand its structure, pursuing still the same hypothesis.—*Whewell, History of Scientific Ideas*, vol. ii. ch. iii.

The principal lead ores in England are those worked in the north of Derbyshire, in the county of Flintshire, in North Wales, and in the neighbourhood of Alston Moor in Cumberland; and the veins containing the ore have often been alluded to as offering some singular and interesting peculiarities of form. From these veins the ore of lead called *galena* (a rich sulphuret) and ores of zinc (calamine and blende) are obtained in considerable abundance, and the lead is usually accompanied by a small percentage of silver, varying from two to about four-and-twenty ounces per ton.—*Ansted, Geology*, ii. 308.

Galénical. *adj.* [*Galen*, the famous Greek physician so called.] Characterized by reference to the practice or teaching of Galen: (so far as it is a *common*, rather than a *proper*, term, *Medical*, as opposed to *Chemical*).

He has been a packhorse in the practical and old *Galenical* way of physick.—*Life of A. Wood*, p. 379.

Chymical medicines are observed to relieve oftener than to cure; *Galenical* decoctions have more of body in them; they work by their substance and their weight.—*Dryden.* (Ord MS.)

Galénical. *s.* [see preceding entry.] Galenical (medical) preparation.

If you are a dispenser of chemicals and *galenicals* by retail, never let your shop get into disrepute by saying you are without any obsolete or ridiculous article that can be enquired for.—*Dose for the Doctors.*

Gálenism. *s.* [see preceding entries.] In *Medicine*. Doctrine of Galen.

Paracelsus, and after him Van Helmont, altered the whole body of medicine; exploded *Galenism*, and the whole Peripatetick doctrine; and rendered medicine almost wholly chymical.—*Chambers.*

Gálenist. *s.* [see preceding entries.] Physician that, in his way of practice, follows the method of Galen, i.e. as *medical* rather than *chemical*.

Let men dispute whether thou breathe or no;
Only in this be no *Galenist*: to make
Courts' hot ambitions wholesome, do not take
A dram of country's dulness; do not add
Correctives, but, as chymiques, purge the bad.
Donne, Poems, p. 147.

Gálilee. *s.* In *Church Architecture*.

1. Resting-place before the entrance to a church.

The *galilee* at Lincoln cathedral is a porch on the west side of the south transept.—*Glossary of Architecture.*

2. Gallery at western end of a cathedral, where penance was done: (so defined in certain books, but with doubtful propriety).

Gall. *s.* [A.S. *gealla* = gall; *gealwe* = yellow.]

1. Bile.

Come to my woman's breast,
And take my milk for *gall*, you murthering ministers! *Shakespear, Macbeth*, i. 5.

Gall is the greatest resolvant of curdled milk: Boerhaave has given at a time one drop of the gall of an eel with success.—*Arbuthnot, On the Nature and Choice of Aliments.*

2. Same used as a pigment.

Clarified ox *gall* combines readily with colouring matters or pigments, and gives them solidity either by being mixed with or passed over them upon paper. It increases the brilliancy and the durability of ultramarine, carmine, green, and in general of all delicate colours, whilst it contributes to make them spread more evenly upon the paper, ivory.... Miniature-painters find a great advantage in employing it; by passing it over ivory, it removes completely the unctuous matter from its surface; and when ground with the colours, it makes them spread with the greatest ease, and renders them fast. It serves also for transparencies. It is first passed over the varnished or oiled paper, and is allowed to dry. The colours, mixed with the *gall*, are then applied, and cannot afterwards be removed by any means. It is adapted finely for taking out the spots of grease and oil.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

3. Gallbladder.

The married couple, as a testimony of future concord, did cast the *gall* of the sacrifice behind the altar.—*Sir T. Browne.*

4. Anything extremely bitter.

She still insults, and you must still adore;
Grant that the honey's much, the *gall* is more.
Dryden, Translation of Juvenal.

His daintiest food, his richest wines, were all
Turn'd by remorse to vinegar and *gall*:
The softest down, by living body press'd,
The rich man bought, and tried to take his rest;
But care had thorns upon his pillow spread,
And scatter'd sand and nettles in his bed.
Crabbe, The Borough.

5. Rancour; malignity; bitterness of temper.

Archilochus to vent his *gall* and spite,
In keen iambics first was known to write;
Dramatic authors used this sort of verse
On all the Greek and Roman theatres,
As for discourse and conversation fit,
And aptest to drown the noises of the pit.
Oldham, Horace's Art of Poetry imitated in English.

Suppose your hero were a lover,
Though he before had *gall* and rage; ...
He grows dispirited and low,
He hates the fight and shuns the blow. *Prior, Alma.*

In private life he [Mr. Grattan] was without a stain, whether of temper or of principle; singularly amiable, as well as of unblemished purity, in all the relations of family and of society; of manners as full of generosity as they were free from affectation; of conversation as much seasoned with spirit and impregnated with knowledge as it was void of all asperity and *gall*.—*Lord Brougham, Historical Sketches of Statesmen of the Reign of George III., Grattan.*

Gall. *s.* [Italian, *galla*.] In its most general sense a round or nutlike swelling, made in a leaf (generally an oak leaf) by a hymenopterous insect (specially Cynips querci), by means of a puncture, followed by a deposition of eggs, itself followed by a swelling, and other changes, resulting in an excrescence of an astringent and styptic character. In *Chemistry* it is a technical term; one preeminently so, inasmuch as a modification of the *gallic* acid has been called *ellagic*, by a kind of rebus; giving, perhaps, the most artificial term in English. *Gallic* acid and *Gallate* (salt of the same) are also technical, though common. See Tannin. In *Botany*, and, to a certain extent, in common language, it means excrescence produced by an insect on an oak. Etymologically, it means a piercing. See extracts.

Galls or galnuts are preternatural and accidental tumours, produced on trees; but those of the oak only are used in medicine. We have Oriental and European *galls*: the Oriental are brought from Aleppo, of the bigness of a large nutmeg, with tubercles on their surface, of a very firm texture, and a disagreeable, acerb, and astringent taste. The European *galls* are of the same size, with perfectly smooth surfaces: they are light, often spongy, and cavernous within, and always of a lax texture. They have a less austere taste, and are of much less value than the first sort. The general history of *galls* is this: an insect of the fly kind wounds the branches of the trees, and in the hole deposites her egg: the lacerated vessels of the tree discharging their contents, form a tumour or woody case about the hole, where the egg is thus defended from all injuries. This tumour also serves for the food of the tender maggot, produced from the egg, which, as soon as it is in its winged state, gnaws its way out, as appears from the hole found in the *gall*; and where no hole is seen, the maggot or its remains are sure to be found within. It has been observed that the oak does not produce *galls* in cold countries: but this observation should be confined to the medicinal *galls*: for all those excrescences which we call oak-apples, oak-grapes, and oak-cones, are true *galls*, though less firm in their texture.—*Sir J. Hill, Materia Medica.*

Malpighi, in his treatise of *galls*, under which name he comprehends all preternatural and morbose excrescences, demonstrates that all such excrescences, where any insects are found, are excited by some venenose liquor, which, together with their eggs, such insects shed.—*Ray, On the Wisdom of God manifested in the Works of the Creation.*

The Aleppo *galls*, wherewith we make ink, are no other than cases of insects, which are bred in them. —*Derham.*

The Levant *galls* are of two different appearances and qualities: the first are heavy, compact, imperforated, the insect having not been sufficiently advanced to eat its way through the shell; prickly on the surface, of a blackish or bluish green hue, about the size of a musket ball. These are called black blue, or Aleppo *galls*. The second are light, spongy, pierced with one or more holes; smooth upon the surface, of a pale grayish or reddish yellow colour, generally larger than the first, and are called white *galls*.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Gall. *s.* [see Sandiver.] See extract.

Gall of glass, called also *sandiver*, is the neutral salt skimmed off the surface of melted crown glass, which, if allowed to remain too long, is apt to be re-absorbed in part, and to injure the quality of the metal, as the workmen call it.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Gall. *s.* Sore or irritable place from chafing or fretting.

This is the fatallest wound; as much superiour to the former as a gangrene is to a *gall* or a scratch.—*Dr. H. More, Government of the Tongue.*

The little tumours resulting from the pressure of the saddle are called warbles, and when they ulcerate they frequently become sit-fasts. For saddle *galls* there is no better application than strong salt and water, mixed with a fourth part of tincture of myrrh.—*Stephens, Book of the Farm.*

The sentiments of Cromwell were widely different. He was not what he had been; nor would it be just to consider the change which his views had undergone as the effect merely of selfish ambition. He had, when he came up to the Long Parliament, brought with him from his rural retreat little knowledge of books, no experience of great affairs, and a temper *galled* by the long tyranny of the government and of the hierarchy.—*Macaulay, History of England*, ch. i.

A congested or tumefied state of the mucous membrane at the outlet of the common duct, and in the duodenum. 3rd. Gállicism. *s.* French (i.e. Gallic) idiom; see first extract.

Gallicism [is] a mode of speech peculiar to the French language: such as, 'he figured in controversy;' 'he held the same language that another had held before;' with many other expressions to be found in the pages of Bolingbroke.—*Johnson.*

In English I would have *gallicisms* avoided, that we may keep to our own language, and not follow the French mode in our speech.—*Felton, Dissertation on Reading the Classicks.*

Temple had . . . gradually formed a style singularly lucid and melodious, superficially deformed, indeed, by *gallicisms* and *hispanicisms*, picked up in travel or in negotiation, but at the bottom pure English, which generally flowed along with careless simplicity, but occasionally rose even into Ciceronian magnificence.—*Macaulay, Critical and Historical Essays, Sir W. Temple.*

Galligáskins. *s.* [see last extract.] Large open hose.

(Cotgrave.) The reference to Gascon is a piece of mistaken etymology. The word is simply a corruption of *Greguesques*, Grecians.—*Wedgwood, Dictionary of English Etymology.*]

Gallimátia, and **Galimátia.** *s.* [Fr. *galimathias.*] Nonsense; talk without meaning.

Gallináceous. *adj.* [Lat. *gallinaceus.*] Denoting birds of the pheasant kind.

Spallanzani has remarked a circumstantial resemblance between the stomachs of *gallinaceous* fowls and the structure of corn mills.—*Paley, Natural Theology*, ch. xv.

The Gallinæ, or *gallinaceous* birds, so named from their affinity with the domestic cock, have in general, like that bird, the upper mandible vaulted, the nostrils pierced in a large membranaceous space at the base of the bill, covered by cartilaginous scales. . . . This order is composed principally of a very natural family, remarkable for having furnished us with the most part of our domestic poultry, and with some excellent game. . . . In comparing the *Gallinæ* to mammiferous animals in respect to internal structure, we find them to exhibit most analogy with the ruminants. The food is collected in the first stomach, or crop. . . . Digestion is begun in the second, which is glandulous; and finished in the third, which is extremely powerful, and commonly called the gizzard.—*Translation of Cuvier's Règne Animal*, i. 2-96.

I remember when I was at school, two of the boys proceeded to a pond, for the purpose of swimming a *gallipot*. . . . It chanced that . . . the smaller boy tipped into the water, and . . . was drowned. . . . The bigger boy was questioned as to what efforts he had made to rescue his companion, and his answers made it evident that he had by no means exerted himself to the utmost. This conviction produced a severe rebuke from the tutor; upon which Master Simpson burst into a flood of tears, and said—'I do think that I could have saved Green—but—if I had tried, I should have lost my *gallipot*.' My infernal farce was my *gallipot*; and to advance the success of that parcel of trash, I made up my mind to postpone my answer to my kind friend upon a vital question, . . . and delay my visit to my mother, whose heart and soul were devoted to my interests.—*Theodore Hook, Gilbert Gurney*, vol. i. ch. i.

2. Ride at the pace which is performed by leaps.

Seeing such streams of blood as threatened a drowning life, we *galloped* toward them to part them.—*Sir P. Sidney.*

He who fair and softly goes steadily forward, in a course that points right, will sooner be at his journey's end than he that runs after every one he meets, though he *gallop* all day full speed.—*Locke.*

Having to attend Lady Kitty Carbuncle on a grand field day, I clap a pint bottle of her ladyship's diet-drink into one of my holsters; intending to proceed to the patient, after the exercise was over. I reach'd the martial ground, and jallop'd—*gallop'd* I mean—wheel'd and flourish'd with great éclat; but when the word 'Fire!' was given, meaning to pull out my pistol in a hell of a hurry, I presented, neck foremost, the d——d diet-drink of Lady Kitty Carbuncle.—*G. Colman the younger, The Poor Gentleman*, i. 2.

Gálloper. *s.* One who, or that which (man or horse), gallops.

Mules bred in cold countries are much better to ride than horses for their walk and trot; but they are commonly rough *gallopers*, though some of them are very fleet.—*Mortimer, Husbandry.*

Gállowglass. *s.* [Irish Gaelic, *giollaglass.*] Irish footsoldier.

It is worn likewise of footmen under their shirts of mail, the which footmen they [the Irish] call *gallowglasses*: the which name doth discover them also to be ancient English; for 'gallogla' signifies an English servitour or yeoman. And he being so armed in a long shirt of mail, down to the calf of his leg, with a long broad ax in his hand, was then pedes gravis armaturæ; and was instead of the footman that now weareth a corslet, before the corslet was used, or almost invented.—*Spenser, View of the State of Ireland.*

The *gallowglasse* useth a kind of poleax for his weapon. These men are grim of countenance, tall of stature, big of limme, lusty of body, well and strongly timbered.—*Stanihurst, Description of Ireland*, ch. viii.

A puissant and mighty pow'r

2. ? One who deserves the gallows.

Cupid hath been five thousand years a boy.—
Ay, and a shrew'd unhappy *gallows* too.
Shakespear, Love's Labour's lost, v. 2.

This is, *perhaps*, the origin of the colloquial epithet *gallows*, as in '*gallows* rascal.' *Gal*, however, is the Norse for *mad*, which suggests another derivation.

Gallows-free. *adj.* [two words.] Exempt by destiny from being hanged.

Let him be *gallowsfree* by my consent,
And nothing suffer, since he nothing meant.
Dryden.

Gállowtree. *s.* [*tree* in the sense of wood.] Gallows. *Rare. Gallows-tree*, which is commoner, is two words rather than a compound.

On *gallowtrees*, in honour of his dearest dame.
Spenser, Faerie Queen.

A Scot, when from the *gallowtree* got loose,
Drops into Styx, and turns a Soland goose.
Cleaveland.

Gállstone. *s.* In *Medicine.* Biliary concretion.

Spasm of the bile-ducts has been presumed rather than proved. Without denying, however, its occurrence, particularly when acrid bile, or *gall-stones*, are passing along the ducts, I believe that it seldom takes place unless from these causes, and in connection with inflammatory irritation. The symptoms cannot be separated from those attending the passage of *gall-stones*, by which it is almost invariably occasioned.—*Copland, Dictionary of Practical Medicine.*

Gálly. *adj.* Having the (bitter) character of gall. *Rare.*

He abhorreth all *gally* and bitter drinkes of sin.—*Archbishop Cranmer, Answer to Bishop Gardiner*, p. 246.

Galvánic. *adj.* Connected with, or consisting in, galvanism.

All the *galvanick* combinations, analogous to the new apparatus of Mr. Volta, which have been heretofore described by experimentalists, consist (as far as my knowledge extends) of series, containing at least two metallic substances, or one metal and charcoal, and a stratum of fluids; and it has been generally supposed that their agencies are, in some measure, connected with the different powers of the metals to conduct electricity; but I have found, that an accumulation of *galvanick* influence, exactly similar to the accumulation in the common pile, may be produced by the arrangement of single metallic plates or arcs, with different strata of fluids.—*Sir H. Davy, Philosophical Transactions*, pt. ii. art. xx.: 1801.

Galvánical. *adj.* Galvanic.

The phenomena of magnets, of electrical bodies, of *galvanical* apparatus, seem to form obvious materials for such sciences.—*Whewell, Philosophy of the mechanical Sciences.*

Gálvanism. *s.* [*Galvani*, the name of the discoverer of the facts out of which the science has been developed.] Branch of electricity so called.

Although *galvanism* and electricity may be considered as the same principles, still, according to the present state of our knowledge, they may be thus distinguished. *Galvanism* is the portion of electricity, which forms a component part of the conducting body, in the act of undergoing a change in its capacity, from a greater to a lesser state; while electricity is the result of a temporary change in non-conducting bodies, insomuch that their capacities become, by attrition, momentarily increased.—*Wilkinson, Elements of Galvanism*, p. 302: 1804.

But Johnson only ran off, to return
With many other warriors, as we said,
Unto that rather somewhat misty bourn,
Which Hamlet tells us is a pass of dread.
To Jack howe'er this gave but slight concern:
His soul (like *galvanism* upon the dead)
Acted upon the living as on wire,
And led them back into the heaviest fire.
Byron, Don Juan, viii. 41.

Gálvanize. *v. a.* Affect by the power of galvanism.

I have tried galvanism in two cases of palsy, both hemiplegia, one a young lady, aged 20, the other a gentleman, aged 25; and, though neither of them were cured, they both received benefit, particularly the gentleman. After being *galvanized* for twenty minutes, they felt a glowing warmth the remainder of the day. The apparatus I used was a pile of twenty-four pair of plates, of five inches diameter. —*Carpue*, in *Electricity and Galvanism*, p. 106: 1803.

(See also under Fustigate.)

Gálvanized. *part. adj.* Acted upon, or effected by, galvanism.

Galvanized iron is a somewhat fantastic name newly given in France to iron tinned by a peculiar patent process, whereby it resists the rusting influence of damp air, and even moisture, much longer than ordinary tin plate. The following is the prescribed process. Clean the surface of the iron perfectly by the joint action of dilute acid and friction, plunge it into a bath of melted zinc, and stir it about till it be alloyed superficially with this metal; then take it out and immerse it in a bath of tin such as is used for making tin plate. The tin forms an exterior coat of alloy. When the metal thus prepared is exposed to humidity, the zinc is said to oxidize slowly by a galvanic action, and to protect the iron from rusting within it, whereby the outer tinned surface remains for a long period perfectly white in circumstances under which iron tinned in the usual way would have been superficially browned and corroded with dust.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Galvanómeter. *s.* Measure for ascertaining the power of galvanic operations.

In the experiments performed by Professor Faraday on a large living gymnotus, the most powerful shocks were received when one hand grasped the head and the other hand the tail, of which I had painful experience; especially at the wrists, the elbows, and across the back. But the nearer the hands were together within certain limits, the less powerful was the shock. It was demonstrated by the *galvanometer* that the direction of the electric current was from the anterior parts of the animal to the posterior parts, and that the person touching the fish with both hands received only the discharge of the parts of the organs included between the points of contact.—*Owen, Anatomy of Vertebrates.*

(For another example see extract under next entry.)

Galvánoscope. *s.* Test for galvanic action.

The phenomena of electro-dynamics are solely produced by electricity in motion. The passage of electricity through solid or liquid conductors is essential; in fact a magnetic needle is a *galvanoscope*, by which means the existence and direction of an electric current may be detected.... But a magnetic needle ... may even serve, by the degree of deflection, as an exact measure of its force. When used for this purpose under the name of a *galvanometer*, some peculiar arrangements are required in order to ensure the requisite delicacy and precision. —*Turner, Elements of Chemistry*, p. 101: 1847.

Gálverly. *adj.* ? Cleverly. *Rare.*

If you happen upon a light gennet that is young and trotteth *galverly*, of good making, colour, and fast going, if you buy him for me for reasonable money and send him over, your money shall be repaid.—*Wriothesley, To Sir T. Wyatt*, Oct. 1537. (Rich.)

Gamáshes. *s.* [generally, perhaps always, plural. The final *-s*, however, is no part of the root.—Italian, *gamascie* (for *gramascie*, as Scotch *gramashes* (Jamieson); French *gamaches*. The corruption to *gambages* probably took effect under the supposition of a derivation from French *jambe*, Italian *gambe*. A further corruption converted *gambages* into *gambadoes*.—Wedgwood, Dictionary of English Etymology.] Kind of leggings: (according to Grose, short spatterdashes worn by ploughmen. In the Praise of Yorkshire Ale (1697), they are explained as coarse cloth stockings that button upon other stockings, to keep one warm).

Daccus is all bedawbed with golden lace,
Hose, doublet, jerkin, and *gamashes* too.
Davies, Scourge of Folly: 1611.
(Nares by H. and W.)

He wore a little brown capouch, girt very near to his body, with a white towel; also a pair of breeches and *gamashoes* of the same coloured cloth, and on his head a clay-coloured cap; his *gamashoes* were lifted up half the leg.—*Skelton, Translation of Don Quixote*, iv. 1.

Gambádoes. *s. pl.* [see Gamashes.] Spatterdashes; boots worn upon the legs above the shoe.

Gámbit. *s.* [Fr.; from Ital. *gambetto* = trip of the heels.] Move at chess so called; see extracts.

Gambit [is] an opening in which a pawn is sacrificed gratuitously at an early stage of the game under particular circumstances upon the chance of obtaining compensation through the attack thereby gained. There are many descriptions of *gambits*, the king's *gambit* being the name of the parent-stock of the greatest number of them. Some *gambits* are distinguished by the names of their several inventors or of those players who first published or practised them; as the Cochrane *gambit* ... &c. Others, for the sake of distinction, are named from some particular move at the commencement, as the bishop's *gambit*.—*Walker, Art of Chess-Play.*

This move occurs in the old work of Damiano, who gives some ingenious variations on it. Lopez and later authors have hence entitled it Damiano's *gambit*.—*Staunton, Chessplayers' Handbook.*

Gambóge. *s.* See extracts.

Gamboge is a concreted vegetable juice, partly of a gummy, partly of a resinous nature, heavy, of a bright yellow colour, and scarce any smell. It is brought from America, and the East Indies, particularly from Cambaja, or Cambogia.—*Sir J. Hill, Materia Medica.*

Gamboge is a gum resin, concreted in the air from a milky juice which exudes from several trees. The Gambogia gutta, a tree which grows wild upon the coasts of Ceylon and Malabar, produces the coarsest kind of *gamboge*; the 'guttæfera vera' ('Stalagmites cambogioides') of Ceylon and Siam affords the best.... *Gamboge* is used as a pigment, and in miniature painting, to tinge gold varnish; in medicine as a powerful purge. It should never be employed by confectioners to colour their liqueurs, as they sometimes do.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Gámbol. *v. n.* [see last extract.] Dance; skip; frisk; jump for joy; play merry frolics.

And heavy whales in awkward measures play. *Pope.*

[Cotgrave renders *gambiller*, merely, 'to wag the legs in sitting, as children use to do;' but *gambader*, 'to turn heels over head, to make many *gambols*.' Our own word was formerly *gambald*. 'To fetch *gambaldes*, French *gambader*, Latin crura in sublime jactare. *Gambalding* horses, being full of praunsings or skippings.' (Huloet.) Barret also gives *gambald* for *gambol* in his dictionary. One 'that can *gambauld* or dance feat.' (Barklay's Egloges, 1570, egl. 2.) The origin is evidently the Italian *gamba*, the leg.—*Todd.*]

Gámbrel. *v. a.* [Cambrel.] Carry as on a cambrel.

Lay by your scorn and pride, they're scurvy qualities,
And meet me, or I'll box you while I have you,

4. Single match at play.

There is no man of sense and honesty, but must see and own, whether he understands the *game* or not, that it is an evident folly for any people, instead of prosecuting the old honest methods of industry and frugality, to sit down to a publick gaming-table, and play off their money one to another.—*Bishop Berkeley, Essay towards preventing the Ruin of Great Britain.*

Used *adjectivally.*

Under the colour of his usual *game*,
He shall here find his friends with horse and men,
To set him free from his captivity.

What arms to use, or nets to frame,
Wild beasts to combat, or to tame,
With all the myst'ries of that *game*. *Waller.*

Some sportsmen, that were abroad upon *game*, spied a company of bustards and cranes.—*Sir R. L'Estrange.*

7. Animals pursued in the field; animals appropriated to legalized, licensed, or certificated sportsmen.

Hunting, and men, not beasts, shall be his *game*,
With war, and hostile snare, such as refuse
Subjection to his empire tyrannous.
Milton, Paradise Lost, xii. 30.

There is such a variety of *game* springing up before me, that I know not which to follow.—*Dryden, Fables, Preface.*

A bloodhound will follow the person he pursues, and all hounds the particular *game* they have in chace.—*Arbuthnot.*

A mighty hunter, and his prey was man:
Our haughty Norman boasts that barb'rous name,
And makes his trembling slaves the royal *game*.

For, grow but wise, you rob me of my *game*.

Gámester. *s.*

1. One who is over-addicted to gaming.

A *gamester*, the greater master he is in his art, the worse man he is.—*Bacon.*

The gentler *gamester* is the soonest winner.

I come, in the next place, to consider the ill consequences which *gaming* has on the bodies of our female adventurers. It is so ordered, that almost every thing which corrupts the soul decays the body.—*Addison, Guardian*, no. 120.

Gaming leaves no satisfaction behind it: it no way profits either body or mind.—*Locke.*

And potted fowl, and fish, come in so fast,
That ere the first is out, the second stinks.
Id., Translation of Persius.

As in some Irish houses where things are so-so,
A *gammon* of bacon hangs up for a show;

Shakespear, Taming of the Shrew, iii. 1.

When by the *gamut* some musicians make
A perfect song, others will undertake,
By the same *gamut* chang'd, to equal it:
Things simply good can never be unfit.
Donne, Poems, p. 70.

Long has a race of heroes fill'd the stage,
That rant by note, and through the *gamut* rage;
In songs and airs express their martial fire,
Combat in trills, and in a fugue expire. *Addison.*

[It is the Greek letter Γ, *gamma*, and *ut*, the name of a musical note. Guido Aretine distinguished the first note of his scale by the Greek letter, with a view, according to some, of shewing that the Greeks were the inventors of musick; but, as others think, of recording his own name by this, the initial letter of it.—*Todd.*]

[*Gamut, gamma.*—French *gamme*, the musical scale. Said to be derived from *gamma*, the Greek name of the letter G, used in denoting the notes of the scale, but the accounts of the reason why this letter was adopted for the purpose are confused and contradictory, and why the Greek name should have been used at all is not explained. The real origin is, in all probability, the French *game* or *gamme*, a chime of bells, which would supply the most familiar example of the musical scale. The addition of the final *ut* in *gamut* arose from the use of that syllable to mark the first note in the scale.—*Wedgwood, Dictionary of English Etymology.*]

I have . . . ascribed this very important . . . manifestation of life to the organic or *ganglial* nervous system.—*Copland, Dictionary of Practical Medicine, Irritation.*

Gánglion. *s.* [Gr. γαγγλίον.]

1. Tumour in the tendinous and nervous parts. *Obsolete.*

Bonesetters usually represent every bone dislocated, though possibly it be but a *ganglion*, or other crude tumour or preternatural protuberance of some part of a joint.—*Wiseman.*

2. Enlargement on the course of certain nerves.

A *ganglion*, then, essentially consists of a collection of nerve-vesicles, or *ganglion*-globules interspersed among nerve-fibres. When a nerve enters a *ganglion*, its component parts separate and pass through the *ganglion* in different directions, so as to be variously distributed among the branches that pass out of it. The only exception to the general fact that the vesicular matter occupies the centre of the *ganglia* occurs in the cerebrum of Vertebrata, in which it is chiefly disposed on the exterior, forming the cortical envelope. The manner in which the nerve-fibres are connected with the *ganglionic* vesicles appears to be not always the same.—*Carpenter, Principles of Physiology*, §§ 240, 241.

Some impression is made upon the peripheral termination of a nerve; this impression is propagated along the nerve until it reaches a *ganglion*; there some action is set up which is propagated along another nerve proceeding from the *ganglion* to a muscle; and thus the stimulus carried through an afferent nerve to some inner centre of communication, is reflected from it through an efferent nerve to the contractile agent.—*Herbert Spencer, Data of Biology*, ch. iv.

Plural both Greek and English; i.e. in both *-a* and *-s*.

Amongst all this diversity in the number, size, and position of the nervous masses, certain *ganglia* are obviously homologous with those which have received determinate names in the lamellibranchiate mollusks. The branchial *ganglions* receive impressions from, and transmit them to, the gills: they communicate also with the brain, and through that centre associate the gills with all other parts of the body.—*Owen, Lectures on Comparative Anatomy*, lect. xxii.

Gangliónic. *adj.* Having the nature of, or consisting in, a ganglion or ganglions.

Gángrenate. *v. a.* Produce a gangrene; mortify. *Rare.*

Parts cauterized, *gangrenated*, siderated, and mortified, become black, the radical moisture or vital sulphur suffering an extinction.—*Sir T. Browne, Vulgar Errours.*

Gángrene. *s.* [Fr. *gangrène*; Gr. γάγγραινα.] Mortification; stoppage of circulation followed by putrefaction.

This experiment may be transferred unto the cure of *gangrenes*, either coming of themselves, or induced by too much applying of opiates.—*Bacon, Natural and Experimental History.*

Gangrene [is the] death of a part or the whole of a structure or organ. The terms *gangrene*, sphacelus, and mortification have been used indiscriminately; but, as mortification and sphacelus signify the last result of the morbid state—are no longer a disease, but its termination—the term here adopted is the more appropriate one. . . . The more vascular a part is, the more disposed is it to inflammation, and consequently to *gangrene*. Hence cellular and mucous tissues are much more liable to it than fibrous and serous structures. . . . . When inflammation is about to pass into *gangrene*, very evident changes take place in the colour, temperature, sensibility, and vital cohesion of the part. The redness becomes darker, or changes to a livid, violet, purplish hue. The increased temperature of the inflamed part is much lessened, and the pain and tenderness diminished. Vesicles also appear on the surface, owing to the effusion of serum, or of a sanguinolent serum, under the cuticle. These changes become more manifest as the *gangrene* passes into its second stage. The colour becomes grey, yellowish grey, greenish, brown, or black, or various intermediate shades. The vesicles are now enlarged, or the cuticle is entirely separated by the effusion of a bloody serum beneath it, which escapes and leaves the skin loosely covered by it, or partially denuded and discoloured. The integument crepitates on pressure, is puffy, soft, cold, and insensible. It soon afterwards emits a cadaverous and offensive odour, indicating that the *gangrened* part is quite dead, and is undergoing decomposition. If the organic nervous power is depressed, or the blood contaminated, the above changes may spread to adjoining parts; whereas, if the vital powers are restored, and the assimilating and excreting functions promoted, the margin of the inflamed part will be limited by the process of ulceration, by which the *gangrened* part is ultimately removed, the loss thus occasioned being partially repaired by the exudation of coagulable lymph, which, becoming organised in the form of granulations, gradually completes the state of reparation and cicatrises.—*Copland, Dictionary of Practical Medicine.*

Gangréne. *v. a.* Mortify: (in its *medical* sense).

In cold countries, when men's noses and ears are mortified, and, as it were, *gangrened* with cold, if they come to a fire they rot off presently; for that the few spirits that remain in those parts, are suddenly drawn forth, and so putrefaction is made complete.—*Bacon, Natural and Experimental History.*

Gangréne. *v. n.* Become mortified.

Wounds immedicable
Rankle and fester, and *gangrene*
To black mortification.
Milton, Samson Agonistes, 621.

Did alle masses bring.
Warner, Albion's England. (Nares by H. & W.)

Gangue. *s.* [German, though spelt as if of French origin; the final *-ue* showing that the *-g-* is to be sounded, i.e. as *gang-g*.]

Gangue [is] a word derived from the German *gang*, a vein or channel. It signifies the mineral substance which either encloses or usually accompanies any metallic ore in the vein. Quartz, lamellar carbonate of lime, sulphate of baryta, sulphate and fluate of lime, generally form the *gangues*; but a great many other substances become such when they predominate in a vein. In metallurgic works the first thing is to break the mixed ore into small pieces, in order to separate the valuable from the useless parts, by processes called stamping, picking, sorting.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Gángway. *s.* See extract.

Gangway [is] a narrow platform or range of planks laid horizontally along the upper part of a ship's side, from the quarter-deck to the forecastle; . . . [it] is also that part of a ship's side, both within and without, by which persons enter and depart. . . . *Gangway* is likewise used to signify a narrow passage left in the hold when a ship is laden. . . . Finally, a *gangway* implies a thoroughfare or narrow passage of any kind.—*Falconer, Marine Dictionary.*

Gángweek. *s.* Week for beating the boundaries of parishes; often Rogation week; same as Gangtide. Preserved where the custom is preserved, otherwise *obsolete.*

Gántelope. *s.* [see next entry.] Military and naval punishment, in which the criminal running between two parallel lines of men receives a blow from each man.

He is fain to run the *gantelope* through the terrors and reproaches of his own conscience.—*Scott, Works, Sermon in* 1680, ii. 29.

Gántlet. *s.* [see last two extracts.] The ordinary spelling with *-u-* is perhaps not so thoroughly established as to make a return towards an improved, though still faulty, mode of spelling impracticable.] Same as preceding.

But wouldst thou, friend, who hast two legs alone
Wouldst thou to run the *gantlet* these expose
To a whole company of hob-nail'd shoes?
Dryden, Translation of Juvenal.

Young gentlemen are driven with a whip, to run the *gantlet* through the several classes.—*Locke.*

[Corrupted from *gantelope*, *gant*, all; and *loopen*, to [illegible] Dutch. (Dr. Johnson.)—Skinner deduces it [illegible] *Ghent*, and the Dutch verb, as if the punishment was first practised at that place. In later times, the word has been found in the shape of *Ghentloup*, on this supposition, whether justly or not. Dr. Johnson gives no instance of *gantelope*, but only of the corruption *gantlet*.—*Todd.*]

[In the phrase *to run the gauntlet*, the word is a corruption of *gantelope*, arising from the possibility of thus giving meaning to the term in English ears, under the supposition that the punishment consisted in a blow from the gauntleted hand of each of a lane of soldiers through which the criminal was made to pass. But the blow was always given with a rod, as appears in the German *durch die Spiess-ruthen laufen* (Spitz- or *Spiess-ruthe*, a switch); French, *passer par les verges*. To run the *gantlet* or *gantelope*, to run through a company of soldiers standing on each side, with each a switch in his hand to scourge the criminal. The punishment was probably made known to us through the wars of Gustavus Adolphus, as the expression is pure Swedish, *löpa gatloph*, from *gata*, a street, or, in military language, a line of soldiers, and *loph*, course.—*Wedgwood, Dictionary of English Etymology.*]

We have often heard men . . . lament that they can find no modern damsel resembling those fair pupils of Ascham and Aylmer who, . . . while the horns were sounding, and the dogs in full cry, sat in the lonely oriel, with eyes rivetted to that immortal page which tells how meekly and bravely the first great martyr of intellectual liberty took the cup from his weeping *gaoler*.—*Macaulay, Critical and Historical Essays, Lord Bacon.*

At any rate *gar* is Scotch, and, in Scotland, of Norse origin. It has not been noted as a provincialism in the southern parts of the Danish area in England, e.g. Lincolnshire, Leicestershire, &c.] Make.

Tell me, good Hobbinol, what *gars* thee greet?

Shameful *garrulity.*
Milton, Samson Agonistes, 488.

2. Quality of talking too much; talkativeness.

Some vices of speech must carefully be avoided: first of all loquacity or *garrulity.*—*Ray, Wisdom of God manifested in the Works of the Creation.*

Gárrulous. *adj.* [Lat. *garrulus.*] Prattling; talkative.

Busy and *garrulous* men.—*Bishop Reynolds, Works*, p. 717.

In some respects Mr. Leigh Hunt is excellently qualified for the task which he has now undertaken. His style, in spite of its mannerism, nay, partly by reason of its mannerism, is well suited for light, *garrulous*, desultory 'ana,' half critical, half biographical.—*Macaulay, Critical and Historical Essays, Comic Dramatists of the Restoration.*

Skelton had been born in Holland during the English troubles, and was therefore supposed to be peculiarly qualified for his post; but he was, in truth, unfit for that and for every other diplomatic situation. Excellent judges of character pronounced him to be the most shallow, fickle, passionate, presumptuous, and *garrulous* of men.—*Id., History of England*, ch. v.

Gárter. *s.* [N.Fr. *jartier.*]

1. String or riband by which the stocking is held upon the leg.

Let their heads be sleekly comb'd, their blue coats brush'd, and their *garters* of an indifferent knit.—*Shakespear, Taming of the Shrew*, iv. 1.

Handsome *garters*, at your knees. *Swift.*

There lay three *garters*, half a pair of gloves,
And all the trophies of his former loves. *Pope.*

2. Mark of the order of the Garter, the highest order of English knighthood.

Now by my George, my *garter*, and my crown....
Thy George, profan'd, hath lost his holy honour;
Thy *garter*, blemish'd, pawn'd his knightly virtue.
Shakespear, Richard III. iv. 4.

You owe your Ormond nothing but a son,
To fill in future times his father's place,
And wear the *garter* of his mother's race. *Dryden.*

3. In *Heraldry.* Principal King at Arms.

Two aldermen, lord mayor, *Garter*, Cranmer, duke of Norfolk, &c.—*Shakespear, Henry VIII.* v. 4, stage direction.

Sir Walter Bickerstaff married Maud the milk-maid, of whom the then *Garter* king at arms (a facetious person) said pleasantly enough, that she had spoiled our blood, but mended our constitutions.—*Addison, Tatler*, no. 75.

Gárter. *v. a.*

1. Bind, or fasten, with a garter.

He, being in love, could not see to *garter* his hose.—*Shakespear, Two Gentlemen of Verona*, ii. 1.

2. Invest with the order of the Garter.

Gártered. *part. adj.* Wearing a (in the extracts *The*) Garter.

Say, conscious dome, if e'er thy marshall'd knights
So nobly deck'd their old majestick rites,
As when, high thron'd amid thy trophied shrine,
George shone the leader of the *garter'd* line?
Warton, Poem on the Birth of the Prince of Wales: 1762.

Swift retained no pleasing recollection of Moor Park.... Long after, when he stood in the Court of Requests, with a circle of *gartered* peers round him, or punned and rhymed with cabinet ministers over secretary St. John's Monte-Pulciano, he remembered, with deep and sore feeling, how miserable he used to be for days together when he suspected that Sir William had taken something ill.—*Macaulay, Critical and Historical Essays, Sir William Temple.*

Gas. *s.* [said to have been invented, or coined, by Van Helmont. If so, it is one of the few words of which the artificial origin is known, and perhaps the only one which has taken root in language. In doing this, however, it began as a scientific term, and only became general when light-

ing by gas was introduced. To another body Van Helmont gave the name *Blas*, which shows how one combination may start another. It has been suggested that *Chaos* is the actual word out of which proceeded the excogitation of the one under notice.] Aeriform body, as opposed to fluids and solids. Such, at least, is its meaning in *Chemistry*. In the *Arts* it chiefly means carburetted hydrogen, as used for the purposes of illumination.

Nymphs! your bright squadrons watch with chemic eyes
The cold elastic vapours as they rise;
With playful force arrest them as they pass,
And to pure air betroth the flaming *gas*.
Darwin, Botanic Garden, pt. i.

With wine inflated, man is all upblown,
And feels a power which he believes his own:
With fancy soaring to the skies, he thinks
His all the virtues all the while he drinks;
But when the *gas* from the balloon is gone,
When sober thoughts and serious cares come on,
Where then the worth that in himself he found?—
Vanish'd—and he sank grov'ling on the ground.
Crabbe, The Borough.

The word *gas*, which is the name now given to every kind of air which differs from the air of the atmosphere, was first introduced into chemistry by Van Helmont. He seems to have intended to denote by it everything which is driven off from bodies in the state of vapour by heat. He divides *gases* into five classes.—*Thomson, System of Chemistry*: 1802.

The notion of the fermentation of fluids, and of the aërial product thence resulting, to which he [Van Helmont] gave the name of *gas*, forms an important part of his doctrines; and of the six digestions which he assumes, the first prepares an acid, which is neutralized by the gall when it reaches the duodenum, and this constitutes the second digestion.—*Whewell, History of Scientific Ideas*, b. ix. ch. i. sect. 2.

Gas is the generic name of all those elastic fluids which are permanent under a considerable pressure, and at the temperature of zero of Fahrenheit. In many of them, however, by the joint influence of excessive cold and pressure, the repulsive state of the particles may be balanced or subverted, so as to transform the elastic *gas* into a liquid or solid.... Ammonia, carbonic acid, carburetted hydrogen, chlorine, muriatic acid, sulphurous acid, sulphuretted hydrogen, are the *gases* of most direct interest in the arts and manufactures.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Gasconáde. *s.* [*Gascon*, native of Gascony, supposed to be of a bragging disposition.] Boast; bravado.

Gasconáde. *v. n.* Utter gasconades.

Gasconáding. *part. adj.* Bragging.

Gasconáding. *verbal abs.* Bragging.

From this *gasconading* a moral we gather,
That the projects of wisdom depend on the weather.
Courtney.

Gáseous. *adj.* Having the character, or consisting, of gas.

When coals are heated in a cast-iron retort to ignition, the progress of decomposition is as follows: First, and before the retort is red-hot, steam issues along with the atmospheric air.... When the retort has come to a bright cherry-red heat, the disengagement of gas is most active. By and bye, the *gaseous* production diminishes, and eventually ceases entirely, although the heat be increased.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Gash. *v. a.*

1. Cut, or hack, in gashes.

To what end do we jaggle and *gash* the garments that are sowed together to cover our bodies, but that thereby we may, as it were, by a most fond and ridiculous anatomie, open and lay forth to the eyes of all men what kind of people we are in our inward hearts; jaggled, (God wot,) and ragged, vain, light, and nothing sound?—*Translation of Bullinger's Sermons*, p. 239: 1576.

2. With a special application to wounds.

Where the Englishmen at arms had been defeated, many of their horses were found grievously *gashed* or gored to death.—*Sir J. Hayward.*

Wit is a keen instrument, and every one can cut and *gash* with it; but to carve a beautiful image, and to polish it, requires great art and dexterity.—*Archbishop Tillotson, Sermons*, vol. i. § 2.

Streaming with blood, all over *gash'd* with wounds,
He reel'd, he groan'd, and at the altar fell.
A. Philips.

Gash. *s.* [L.German, *gatsken*.] Deep and long cut; deep irregular wound from a cut or slash; less properly (as in last extract), seam or scar thereof.

He glancing on his helmet, made a large
And open *gash* therein; were not his targe,
That broke the violence of his intent,
The weary soul from thence it would discharge.
Spenser.

Hamilton drove Newton almost to the end of the lists; but Newton on a sudden gave him such a *gash* on the leg, that therewith he fell to the ground.—*Sir J. Hayward.*

Not long divisible; and from the *gash*
A stream of nectarous humour issuing flow'd.
Milton, Paradise Lost, vi. 330.

I was fond of back-sword and cudgel-play, and I now bear in my body many a black and blue *gash* and scar.—*Arbuthnot.*

Gáshful. *adj.* Unless for Gastful, full of gashes; looking terrible.

'Tis not the holding of thy hands so high,
Nor yet the purer squinting of thine eye;
'Tis not your mimick mouths, nor antick faces,
Nor scripture phrases, nor affected graces,
Nor prodigal upbending of thine eyes,
Whose *gashful* balls do seem to pelt the skies;
'Tis not the strict reforming of your hair
So close that all the neighbour skull is bare;
'Tis not the drooping of thy head so low,
Nor yet the louring of thy sullen brow—
No, no; 'tis none of this that God regards;
Such sort of fools their own applause rewards.
Quarles, History of Jonah, sign. H. 2: 1620.

Come death, and welcome; which spoke, comes in a *gashful*, horrid, meagre, terrible, ugly shape.—*Gayton, Notes on Don Quixote*, p. 69: 1654.

Gásket. *s.* [Fr. *garcette*.] See extract.

Gasket [is] a sort of platted cord fastened to the sailyards of a ship, and used to furl or tie up the sail firmly to the yard, by wrapping it round both six or seven times, the turns being at a competent distance from each other. Bunt *gasket* is that which supports or ties up the bunt of the sail, and should consequently be the strongest.... Quarter *gasket* is used only for large sails.... The yard-arm *gasket* is made fast to the yard-arm, and serves to bind the sail as far as the quarter *gasket* on large yards, but extends quite into the bunt of small sails.—*Falconer, Marine Dictionary.* (Burney.)

Gáskins. *s.* Galligaskins.

If one point break, the other will hold;
Or, if both break, your *gaskins* fall.
Shakespear, Twelfth Night, i. 5.

Come, come, George, let's be merry and wise; the child's a fatherless child, and say they should put him into a strait pair of *gaskins*, 'twere worse than knot-grass, he would never grow after it.—*Beaumont and Fletcher, Knight of the Burning Pestle.*

Gasómeter. *s.* See extract.

Gasometer means properly a measurer of gas, though it is employed often to denote a recipient of gas of any kind.... The *gasometer* serves not merely as a magazine for receiving the gas when it is purified, and keeping it in store for use, but also for communicating to the gas in the act of burning such an uniform pressure as may secure a steady unflickering flame. It consists of two essential parts: 1. Of an under cistern, open at top, and filled with water; and 2, of the upper floating cylinder or chest, which is a similar cistern inverted, and of somewhat smaller dimensions, called the gasholder.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Gasp. *v. n.* [? Icelandic, *geispa* = yawn.]

I lay me down to *gasp* my latest breath;
The wolves will get a breakfast by my death.
Dryden.

Gástric. *adj.* [Fr. *gastrique*; Gr. γαστήρ = belly.] Belonging to, relating to, or connected with, the belly.

1. In *Anatomy* and *Physiology*. Applied to certain nerves that supply the abdominal viscera, and to the secretion by which digestion is chiefly promoted in the stomach.

The great purpose of the *gastric* digestion appears to be to dissolve the albuminous and gelatinous constituents of the food.... The solvent action of the *gastric* fluid is aided by the movement of the walls of the stomach.—*Carpenter, Principles of Physiology, General and Comparative*, § 410.

Indigestion may ... arise from depression or modification of the nervous influence: giving rise, 1st, to imperfect or disordered action of the muscular coats of the stomach; 2nd, to a diminished or modified secretion of the *gastric* juices.—*Copland, Dictionary of Practical Medicine, Digestive Canal.*

2. In *Pathology*. Applied to certain forms of fever.

Owing to this circumstance the divisions of continued fevers ... have been arbitrary and varied. Stoll arranged them as inflammatory, putrid, bilious, and pituitous; J. P. Frank [as] the inflammatory, *gastric*, and nervous;... J. Frank [as] typhoid, *gastric* or bilious, rheumatic or catarrhal, and the inflammatory.... These and other modifications [of bilio-*gastric* fever] depend upon the causes and combination of causes producing it, and have given rise to the appellations *gastric*, bilious, yellow, *gastro*-bilious, *gastro*-inflammatory, bilious-inflammatory, bilious continued, *gastro*-meningitic, &c., applied to it by modern writers, and cause it frequently to be confounded with the severe inflammatory fever on the one hand, and with pestilential yellow fever on the other.—*Copland, Dictionary of Practical Medicine, Fever.*

Gastríloquism. *s.* See extract.

Gastriloquism [is] a hybrid term synonymous with ventriloquism.—*Hooper, Medical Dictionary.*

Gastríloquist. *s.* [Fr. *gastriloque*; from Gr. γαστήρ + Lat. *loquor* = speak.] Ventriloquist: (which latter, being wholly Latin (*venter*, *-tris* = belly), is the better word. *Gastriloquous*, and perhaps other equally objectionable terms, may be found in writers of indifferent authority).

Gastriloquists are persons, who have acquired the art of modifying their voice, so that it affects the ear of the hearers, as if it came from another person, or from the clouds, or from under the earth.—*Reid.*

Gástronome. *s.* [French rather than English.] Adept in gastronomy.

Moreover the happy *gastronome* may wash it down with a selection of thirty wines, from Burgundy to Tokay.—*L. F. Simpson, Handbook of Dining, Translation from Brillat-Savarin*, ch. iii.

Gastronómic. *adj.* Relating to, connected with, or consisting in, gastronomy.

In our high *gastronomic* circles, in those select reunions where politics are obliged to give way to a dissertation on taste—what is expected? what is brought up at the second course?—*L. F. Simpson, Handbook of Dining, Translation from Brillat-Savarin*, ch. vii.

Gastronómical. *adj.* Relating to Gastronomy.

Every one at a French dinner is served on a cold plate. The reason of a custom, or rather a necessity, which one would think a nation so celebrated for their *gastronomical* taste would recoil from, is really, it is believed, that the ordinary French porcelain is so very inferior, that it cannot endure the preparatory heat for dinner.—*Disraeli the younger, Coningsby*, b. vi. ch. ii.

Gastrónomist. *s.* Gastronome: (upon which word it is an improvement, being more in accordance with the ordinary English forms, such as Economist).

I was glad to have an opportunity of dining with so renowned a *gastronomist*.—*Sir E. B. Lytton, Pelham.*

Gastrónomy. *s.* [Gr. γαστήρ = belly, νόμος = law.] Principles of cookery; science of delicacies in the way of food; art of dining.

'Yes!' I cried. 'Let us for once shake off the prejudices of sectarian faith, and do justice to one order of those incomparable men, who, retiring from the cares of an idle and sinful world, gave themselves with undivided zeal and attention to the theory and practice of the profound science of *gastronomy*.'—*Sir E. B. Lytton, Pelham.*

Gástropod. *s.* [Gr. γαστήρ = belly, πούς, ποδός = foot.] Large class of molluscs, both aquatic and terrestrial (the snails and slugs being examples of the latter division), so called from the organ of locomotion, or foot, being situated on the abdominal surface.

The part of the mantle which invests the viscera in the conchiferous *gastropods* is smooth, thin, and sub-transparent, resembling the sac of a hernia, which, with the viscera themselves, appears to have escaped from the common muscular integument of the body.... The primitive muscular fibre is smooth in all *gastropods*.... The cutaneous muscular layer consists of oblique, longitudinal, and transverse fibres, intimately united with the corium. Upon the ventral surface it becomes very thick, and forms a long disc called the foot. The fibres of this part contract successively, so as to form wrinkles or transverse waves following each other from behind forwards; whereby the disc glides over solid bodies or the surface of water. The circular foot of the limpet is used as an adhesive sucker. In some species it expands to a great breadth; in many it is extended lengthwise, and more or less cleft transversely.... The tentacles, buccal mass, and penis, have their special retractor muscles in most *gastropods*.... At the grade of the molluscous organisation which the *gastropods* have reached, their capabilities and spheres of action become more extended and diversified than in the pteropods and acephala; some are terrestrial, some arboreal, whilst the more numerous aquatic species are endowed with power to attain, subdue, and devour organised matter, dead and living. The nervous system of the *gastropods* is accordingly not only more complex and concentrated, not only subordinated to better developed masses in connection with organs of special sense and exploration, but it offers greater variety in its general arrangement, and especially in the position of its ganglions, than in the lamellibranchiate class, and with these modifications considerable differences in the outward configuration of the body are associated.—*Owen, Lectures on Comparative Anatomy*, lect. xxii.

Why is it that the naked *gasteropods*, such as our common slugs, deviate from bilateral symmetry, though their modes of movement are those along with which complete bilateral symmetry usually occurs? The reply is, that their deviations from bilateral symmetry are probably inherited, and that they are maintained in such parts of their organization as are not exposed to bilaterally-symmetrical conditions. There is reason to believe that the naked *gasteropods* are descended from *gasteropods* that had shells: the evidence being that the naked *gasteropods* have shells during the early stages of their development, and that some of them retain rudimentary shells throughout life. Now the shelled *gasteropods* deviate from bilateral symmetry in the disposition of both the alimentary system and the reproductive system. The naked *gasteropods*, in losing their shells, have lost that immense one-sided development of the alimentary system which fitted them to their shells, and have acquired that bilateral symmetry of external figure which fits them for their habits of locomotion; but the reproductive system remains one-sided, because, in respect to it, the relations to external conditions remain one-sided. The cephalopods, which are interpretable as higher developments on the *gasteropod* type, show us bilaterally-symmetrical external forms along with habits of movement through the water in two-sided attitudes.—*Herbert Spencer.*

Drummond, Travels through Germany, Italy, and Greece*, p. 246.

Their nicely *gawded* cheeks.

Gaúdery. *s.* Finery; ostentatious luxury of dress.

The triumph was not pageants and *gaudery*, but one of the wisest and noblest institutions that ever was.—*Bacon, Essays.*

Age, which is but one remove from death, and should have nothing about us but what looks like a decent preparation for it, scarce ever appears, of late, but in the high mode, the flaunting garb, and utmost *gaudery* of youth, with clothes as ridiculously, and as much in the fashion, as the person that wears them is usually grown out of it.—*South, Sermons.*

A plain suit, since we can make but one,
Is better than to be by tarnish'd *gaud'ry* known.
Dryden.

Gaúdiness. *s.* Attribute suggested by Gaudy; showiness; tinsel appearance.

Neither are the men much less guilty of this pernicious folly, who, in imitation of a *gaudiness* and foppery in dress introduced of late years into our kingdom, cannot find materials in their own country, worthy to adorn their bodies of clay, while their minds are naked of every valuable quality.—*Swift, Sermon on the State of Ireland.*

Gaúdy. *adj.* Showy; splendid; pompous; ostentatiously fine.

Costly thy habit as thy purse can buy,
But not exprest in fancy; rich, not *gaudy*;

Which is more honest than a cunning grief

Was he thinking of the old Roman luxury, or of a *gaudy*-day at Cambridge?—*Lamb, Essays of Elia, Grace before Meat.*

I will make
Amends hereafter by some *gaudy*-day.
Tennyson, Idylls of the King, Enid.

Gauge. *s.* [Fr. *gauge.*] Measuring rod; measure in general; standard.

If money were to be hired, as land is, or to be had from the owner himself, it might then be had at the market rate, which would be a constant *gauge* of your trade and wealth.—*Locke.*

Timothy proposed to his mistress that she should entertain no servant that was above four foot seven inches high, and for that purpose had prepared a *gage*, by which they were to be measured.—*Arbuthnot, History of John Bull.*

What is the reason that in a box where there are nine black balls and one white, we expect to draw a black ball nine times as much (in other words, nine times as often, frequency being the *gauge* of intensity in expectation) as a white? Obviously because the local conditions are nine times as favourable, because the hand may alight in nine places and get a black ball, while it can only alight in one place and find a white ball..... It is, in fact, evident, that when once causation is admitted as an universal law, our expectation of events can only be rationally grounded on that law.—*J. S. Mill, System of Logic*, iii. 18, § 41.

Gauge. *v. a.* Measure as with a gauge and in respect to the contents of a vessel; measure generally.

The vanes nicely *gauged* on each side, broad on one side, and narrow on the other, both which minister to the progressive motion of the bird.—*Derham, Physico-Theology.*

There is nothing more perfectly admirable in itself than that artful manner in Homer, of taking measure or *gaging* his heroes by each other, and thereby elevating the character of one person by the opposition of it to some other he is made to excel.—*Pope, Essay on Homer's Battles.*

With such kind of spiritual discourse they emptied the bowl of punch, paid their reckoning, and separated: Adams and the doctor went up to Joseph; Parson Barnabas departed to celebrate the aforesaid deceased, and the exciseman descended into the cellar to *gauge* the vessels.—*Fielding, Life and Adventures of Joseph Andrews.*

Gaúger. *s.* One who gauges: (specially an officer appointed by the Excise for that purpose).

Those earls and dukes have been privileged with royal jurisdiction: and appointed their special officers, as sheriff, admiral, *gauger*, and escheator.—*Carew, Survey of Cornwall.*

From the noblemen who held the white staff and the great seal, down to the humblest tidewaiter and *gauger*, what would now be called gross corruption was practised without disguise and without reproach.—*Macaulay, History of England*, ch. iii.

Gault. *s.* [?] In *Geology.* Formation between the Upper and Lower Greensand. *Provincial*; probably most peculiar to the parts about Cambridge, which stands on the *gault.*

The *gault*, immediately overlying the lower greensand, is rarely absent, and may, perhaps, be considered as the most persistent of all the beds of the cretaceous group, scarcely ever changing its peculiarities of mineral composition or fossil remains.—*Ansted, Geology.*

Gault. *v. a.* In *Husbandry.* Dress with clay.

Gaúlting. *verbal abs.* Claying with gault, i.e. with clay, where it is so named.

The process of *gaulting* or claying the soil is conducted in this manner.—*Stephens, The Book of the Farm*, 2124.

Gaunch. *v. a.* Punish, after the manner of Turkey, by hanging the offender alive on a hook.

The earlier explanation is 'drop from a high place upon hooks,' and this is what Sir W. Scott has adopted in his edition of Dryden. The still more cruel punishment, however, of tying the victim's hands and feet, and then hanging him on a hook passed under the lowest ribs, disgraces more than one Eastern country. It is to this that the following lines of Smith, from the Musæ Anglicanæ, quoted by Johnson, most closely apply:—

'Cohors catenis qua pia stridulis
Gemunt onusti, vel sude trans sinum
Luctantur actâ, pendulive
Sanguineis trepidant in uncis.'

Take him away, *ganch* him, impale him.
Dryden, Don Sebastian.

Gaúnching. *verbal abs.* Punishment of being gaunched.

Among them are more frequent and horrid executions than in the rest of Turky, as empaling, *gaunching*, flaying alive.—*Blount, Voyage to the Levant*, p. 94.

Gaunt. *s.* Meagre.

Oh, how that name befits my composition!
Old Gaunt, indeed, and *gaunt* in being old:
Within me grief hath kept a tedious fast:
And who abstains from meat that is not *gaunt?*
For sleeping England long time have I watch'd
Watching breeds leanness, leanness is all *gaunt*:
The pleasure that some fathers feed upon,
Is my strict fast: I mean my children's looks:
And therein fasting thou hast made me *gaunt*:
Gaunt am I for the grave, *gaunt* as a grave,
Whose hollow womb inherits nought but bones.
Shakespear, Richard II. ii. 1.

Two mastiffs *gaunt* and grim her flight pursu'd,
And oft their fasten'd fangs in blood imbru'd.
Dryden, Fables.

Gaúntlet. *s.* [Fr. *gantelet.*] Iron glove used for defence, and thrown down in challenges.

A scaly *gauntlet* now with joints of steel,
Must glove this hand.

This a *gauntlet*, that a muff.

And calls for Englishmen to judge the field.
Southern.

Run the gauntlet. See Gantlet.

Gaúntree. *s.* See extract.

[*Gauntree.*—A frame to set casks on in a cellar. French *chantier*, a support for vines, *gauntry* or stilling for hogsheads, trestle to saw timber on (Cotgrave); also the stocks on which a ship is built. From Latin *cantherius*, a horse of burden, then applied (as in modern languages a horse, ass, or goat) to a wooden support for various purposes. *Cantherius*, a prop for a vine, rafter of a roof, trestle or *horse* to saw timber on. (Littleton.) The Germans use *bock*, a goat, in the last of these senses. In like manner we speak of a *clothes-horse*, and French *chevalet*, a little horse, is a painter's easel (German *esel*, an ass), the frame which supports his work.—*Wedgwood, Dictionary of English Etymology.*]

Gauze. *s.* [Fr. *gaze.*] Kind of thin transparent silk.

Gauze [is] the thin canvas that serves women for a ground unto their cushions, or pursework; also, the slight stuff, tiffany; also, a mantle, &c.; also wealth, substance, and a prince's treasury.—*Cotgrave.*

Silken clothes were used by the ladies; and it seems they were thin like *gauze.*—*Arbuthnot, Tables of ancient Coins, Weights, and Measures.*

But the philosopher was allowed to disprove the charge of sobriety, or at least to make amends for his fault; and, on the king's sending for him the next day, he made himself drunk publicly in the sight of all the court, and danced with cymbals in a loose dress of Tarentine *gauze.*—*Sharpe, History of Egypt*, ch. ix.

The lady was all of a flutter with faded lutestring, washed *gauze*, and ribands three times refreshed.—*Smollet, Expedition of Humphry Clinker.*

Are with a constant northwind dried.
Chapman, Translation of the Iliad, xxi.

Gávelet. *s.* [?] See extract.

Gavelet [is] an ancient and special kind of cessavit used in Kent, where the custom of *gavelkind* continues, whereby a tenant, if he withholds his rent and services due to the lord, shall forfeit his land.... The word *gavelet*, in its original signification, imported rent; but it means also a process for the recovery of rent... peculiar to Kent and London.... This remedy of *gavelet* as well as cessavit is now fallen wholly into disuse.—*Tomlin, Law Dictionary.*

Gávelkind. *s.* [?] In *Law.* Principle or practice of devising property without favour to the eldest son, i.e. as opposed to that of primogeniture.

(For another example see extract under preceding entry.)

Gávelock. *s.* [A.S. *gafeloc*, from *gafl*, most usual in the plural form, i.e. *gaflas* = the prongs of a fork or forklike instrument.] Crowbar.

Donax, come thou hither into the midst of the host with thy *gavelocke.* Simalio, goe you forth into the left wing of the battell: and thou, Syriscus, into the right.—*Terence in English*: 1614.

Gávial. *s.* [?] Asiatic crocodile.

The *gavials* have the muzzle narrow and greatly elongated. The teeth are pretty nearly equal.... The hind feet are indented at the external edge, and palmated to the end of the toes. There are two large holes in the bone of the cranium behind

the eyes, which may be perceived through the skin. They have been as yet observed only on the ancient continent. The most known is the *gavial* of the Ganges, a species which becomes very large, and which, independently of the length of its muzzle, is remarkable for a thick cartilaginous prominence surrounding the nostrils and thrown backwards. This prominence occasioned Ælian to assert that there exist in the Ganges some crocodiles which have a horn on the end of the muzzle.—*Translation of Cuvier's Règne Animal.*

In the alligators and crocodiles the teeth are more unequal in size, and less regular in arrangement, and more diversified in form, than in the *gavials*. . . . The teeth of the *gavial* are subequal, most of them present the form of a crown, . . . long, slender, pointed, subcompressed from before backward, with a trenchant edge on the right and left sides, between which a few faint longitudinal ridges traverse the basal part of the enamelled crown.—*Owen, Anatomy of Vertebrates.*

Gavót. *s.* [Fr. *gavotte.*] Dance so called: (Cotgrave calls it a kind of brawl danced, commonly, by one alone).

That hath so well been taught her dazzling fence.
Milton, Comus, 790.

4. Addicted to pleasure; loose.

Gáyal. *s.* [?] In *Zoology.* Species of ox so called. See extract.

The Urus Gavæus, or *gayal* bison of India, prepares us for entering upon the true oxen. It shows a disposition intermediate between the ferocity of its own congeners, and the gentleness of the ox. It has been domesticated by certain tribes of India from time immemorial; and is particularly remarkable for a high and sharp ridge, which commences on the hinder part of the neck, and slopes gradually up till it comes over the shoulder joints: this evidently is but a modification of the hump on the ordinary bisons, and of the elevated shoulders of the Camelopardalis.—*Swainson, Natural History and Classification of Quadrupeds*, § 288.

Gáyety. *s.* (Gaiety *commoner.*)

1. Cheerfulness; airiness; merriment; light amusement.

The *gazelle* antelopes may, then, be said to have their horns lyre-shaped, with the bony cores solid: they are provided with a small lachrymary sinus, and with unguinal pores: the knees also are generally tufted.—*Swainson, Natural History and Classification of Quadrupeds*, § 265.

Her eye's dark charm 'twere vain to tell,

Think yourself station'd on a tow'ring rock,

Then view him self-proclaim'd in a *gazette*
Chief monster that has plagu'd the nations yet.

In the seventeenth century the pulpit was to a large portion of the population what the periodical press now is. Scarce any of the clowns who came to the parish church ever saw a *gazette* or a political pamphlet. — *Macaulay, History of England*, ch. iii.

During a considerable time the unofficial *gazettes*, though much more garrulous and amusing than the official *gazette*, were scarcely less courtly.—*Ibid.* ch. xxi.

[The *Gazette* was a kind of literary newspaper, in single sheets, published at Venice in the sixteenth century, which was sold for a *gazet*. The *foglio d' avvisi*, from the circumstance of its price, has given the name of *gazette* to newspapers in many countries. At first, we used, in the plural, *gazetti*. Our *gazettes* began to be regularly printed in 1665. —*Todd.*]

[*Gazette.*—Commonly derived from *gazzetta*, a small Venetian coin supposed to have been the price of the original newspaper. But the value of the gazetta was so small ('not worth a farthing of ours,' Florio) that it never could have been the price either of a written or printed sheet. The radical meaning of the word is shown in Italian *gazetta, gazette*, all manner of idle chattings or vain prattlings, but now generally used for running reports, daily news, intelligences, and advertisements as are daily invented and written unto foreign nations, viz. from Venice, Rome, and Amsterdam. (Florio.) The object of the *gazette* was to communicate the political chit-chat of the day.— *Wedgwood, Dictionary of English Etymology.*]

'What is that?'—'It is a dirty newspaper,' replied the host, 'which hath been given away all over the nation for these many years to abuse trade and honest men, which I would not suffer to lie on my table, tho' it hath been offered me for nothing.'—*Fielding, The Adventures of Joseph Andrews.*

They have drawled through columns of *gazetteers* and advertisers for a century together.—*Burke, On the State of the Nation.*

4. Title of certain works on geography: (as 'The Universal *Gazetteer*').

But tell me, . . . is that Isola Bella a true spot in geographical denomination, or a floating Delos in thy brain? Lurks that fair island in verity in the bosom of Lake Maggiore? . . . And what if Maggiore itself be but a coinage of adaptation? Of this, pray resolve me immediately. . . . Lake Leman I know, and Lemon Lake (in a punch bowl) I have swum in, though those lymphs be long since dry. But Maggiore may be in the moon. Unsphinx this riddle for me, for my shelves have no *gazetteer*.—*Lamb, Letter to Proctor.*

R. Greene, Philomel.

Geck. *s.* [A.S. *geac* = cuckoo.]

1. Fool; simpleton.

And made the most notorious *geck* and gull
That e'er invention play'd on?
Shakespear, Twelfth Night, v. 1.

2. Jest.

Why did you suffer Iachimo,
Slight thing of Italy,
To taint his noble heart and brain
With needless jealousy,
And to become the *geck* and scorn
O' th' other's villany?
Shakespear, Cymbeline, v. 4.

Gécko. *s.* [see extract.] Member of a family of the Saurian division of the Reptiles, consisting of nocturnal lizards.

The *geckos* . . . have not the lank form of those [Saurians] of which we have hitherto treated, but are, on the contrary, flattened, especially about the head, and have the feet middling and the toes nearly equal. . . . The genus is numerous, and spread through the warm regions of both continents. The gloomy and heavy aspect of the *geckos*, and a certain resemblance to the salamanders and toads, has caused them to be held in abhorrence and accused of being poisonous, but without any real proof of the fact. . . . *Gecko* is a name given to a species from the East Indies, and imitated from its cry, as another species has been named Tockaie at Siam, and a third Geitje, at the Cape.—*Translation of Cuvier's Règne Animal.*

Gee. *s.* Name of the seventh letter in the English alphabet.

Gee. Term used by waggoners to their horses when they would have them go faster.

A learned friend, whose communications I have frequently had occasion to acknowledge in the course of this work, says, the exclamation *geho, geho*, which carmen use to their horses, is probably of great antiquity. It is not peculiar to this country, as I have heard it used in France In the story of the milkmaid who kicked down her pail, and with it all her hopes of getting rich, as related in a very ancient collection of apologues, entitled 'Dialogus Creaturarum,' printed at Gouda, in 1480, is the following passage: 'Et cum sic gloriaretur, et cogitaret cum quanta gloria duceretur ad illum virum, super equum dicendo *gio, gio*, cepit pede percutere terram, quasi pungeret equum calcaribus.'—*Brand, Popular Antiquities.*

Gélatine. *s.* [see Gelly and Jelly.] See extract.

Under [the] name [of *gelatinous* tissue] are included the organic tissue of the bones, that of tendons and ligaments, the cellular tissue, the skin, and the serous membranes. All these substances dissolve by long-continued boiling in water, and the solution on cooling forms a jelly. The coarser forms of *gelatine* from hoofs, hides, &c., are called glue; that from skin and finer membranes is known as size; and the purest *gelatine*, from the air-bladders and other membranes of fish, is called isinglass.—*Turner, Elements of Chemistry*: 1847.

To whatever degree we might imagine our knowledge of the properties of the several ingredients of a living body to be extended and perfected, it is certain that no mere summing up of the separate actions of those elements will ever amount to the action of the living body itself. The tongue, for instance, is, like all other parts of the animal frame, composed of *gelatine*, fibrin, and other products of the chemistry of digestion, but from no knowledge of the properties of those substances could we ever predict that it could taste, unless *gelatine* or fibrin could themselves taste.—*J. S. Mill, System of Logic*, iii. vi. § 1.

Gélatine. *adj.* Gelatinous.

You shall always see their eggs laid carefully up in that spermatick *gelatine* matter, in which they are deposited.—*Derham.*

With like advantage on the other side,
Gelding the opposed continent as much
As on the other side it takes from you.

3. Deprive of anything immodest, or liable to objection.

For they, by his authentick copy, know
Both how to *geld* and to adulterate it.

They were diligent enough to make sure work, and to *geld* it so clearly in some places that they took away the very manhood of it.—*Dryden, Preface to Cleomenes.*

Geld. *s.* [A.S.] Compensation; fine; payment; tribute.

Gélder. *s.* One who gelds.

2. Eunuch. *Obsolete.*

Gems with the dews of health the drooping flower.
Tears of St. Margaret.

Gem. *v. n.* Put forth the first buds.

Last rose, in dance, the stately trees, and spread
Their branches, hung with copious fruit; or *gemm'd*
Their blossoms. *Milton, Paradise Lost*, vii. 324.

Gémel. *s.* [Lat. *gemellus*; Fr. *gemeau, gémelle.*] Pair.

The quadrin doth never double; or, to use a word of heraldrie, never bringeth forth *gemels*.—*Drayton, Barons' Wars*, pref.

Gémel ring. *s.* See Gemow.

Géminal. *s.* Pair. *Rare.*

That twins their hearts, and doth of two make one.
B. Jonson, Masques.

Gémini, or **Géminy.** *interj.* See extract.

A parcel of lazy chaps, I dare say—but I'll make them stir their stumps. Well, here we are at last. Oh! *gemini gig*, how my poor bones do ache!—*Morton, Secrets worth Knowing*, i. 1.

[*Gemini! By Gis.*—The wish to avoid the sin of profane swearing without giving up the gratification of the practice has led to the mangling of the terms used in exclamation, so as to deprive them of all apparent reference to sacred things. Hence French *mort bleu, corbleu*, for *mort, corps de Dieu*; *sapperment* for *sacrament*; Swabian *mein echel*, for *mein eid*; Alsace *bi Gobb! bi Golle! bi Gosch! Gotz! Botz! Potz! O Jeses! O Je! Jerum, Jere, Jemer, Jeigger, Jegesle, Jemine.* Platt Deutsch, *Je! Jes! Herr Jes! Jemine!*—*Wedgwood, Dictionary of English Etymology.*]

Gémma. *s.* plur. *gemmæ.* [Lat.] Bud: (in *Botany* and *Zoology*, used both as an independent word and as the basis of several compounds and derivatives connected with the phenomena of growth and reproduction; e.g. *gemmiparous, gemmiferous*).

(For examples see extract under Gemmation.)

Gémmary. *adj.* Pertaining to gems or jewels. *Rare.*

Gemmátion. *s.* Process by which buds are given off.

1. In *Botany*, with the ordinary sense of the term, budding.
2. In *Zoology*, applied to the reproduction of corallines, hydras, and numerous other species of the lower animals, wherein the process is akin to that of the budding of plants.

In other annelids we find that the string of segments arising by *gemmation* from a single germ becomes a permanently united whole: the tendency to any more complete fission than that which marks out the segments, being lost; or, in other words, the integration having become relatively complete. Leaving out of sight the question of alliance among the types above grouped together, that which it here concerns us to notice is, that longitudinal *gemmation* does go on; that it is displayed in that primitive form in which the *gemmæ* separate as soon as produced; that we have types in which such *gemmæ* hang together in groups of four, or in groups of eight and ten, from which however the *gemmæ* successively separate as individuals; that among higher types we have long strings of similarly-formed *gemmæ* which do not become individually independent, but separate into organized groups; and that from these we advance to forms in which all the *gemmæ* remain parts of a single individual. One other significant class of facts must be added. A few cases have been pointed out, one of them quite recently, in which annelids multiply by lateral *gemmation*. M. Pagenstecher alleges this of the Exogone *gemmifera*: describing a certain number of the segments of the body as severally bearing on their dorsal surfaces a bud on each side. And M. L. Vaillant, after citing this observation of M. Pagenstecher, gives an account of a species of Syllis in which a great number of buds were borne by a single segment. That the longitudinally-produced *gemmæ* which compose an annelid, should thus have, one of them or several of them, the power of laterally budding-off *gemmæ*, from which no doubt other annelids arise, gives further support to the hypothesis that, primordially, the segments were independent individuals. And it suggests this belief the more strongly because, in certain types of Cœlenterata, we see that longitudinal and lateral *gemmation* do occur together, where the longitudinally-united *gemmæ* are demonstrably independent individuals.—*Herbert Spencer.*

Gémmeous. *adj.* Connected with, or having the nature of, a gem.

Sometimes we find them in the *gemmeous* matter itself.—*Woodward.*

Gémmy. *adj.* Resembling, having the nature of, consisting of, or adorned with, gems.

As he rode down to Camelot.

Paralleles or *gemowe* lynes be suche lines as be drawen foorth still in one distaunce, and are no nerer in one place then in an other, for an if they be nerer at one ende then at the other, then are no paralleles, but maie bee called bought lynes.—*R. Recorde, The Pathway to Knowledg, containing the first Principles of Geometry.*

Génder. *s.* [Fr. *genre*; Lat. *genus, -eris.*]

1. Kind; sort: (*genus* commoner).

Our bodies are our gardens, to the which our wills are gardeners; so that if we will supply it with one *gender* of herbs, or distract it with many, the power and corrigible authority of this lies in our wills.—*Shakespear, Othello*, i. 3.

The other motive,
Why to a publick court I might not go,
Is the great love the general *gender* bear him.
Id., Hamlet, iv. 7.

2. In *Grammar.* Conventional sex attached to certain words, according to the practice of the language.

Sex and *gender* are qualities which belong to substances, but cannot belong to the qualities of substances.—*A. Smith, On the Formation of Languages.*

Cubitus, sometimes cubitum in the neutral *gender*, signifies the lower part of the arm on which we lean.—*Arbuthnot.*

Ulysses speaks of Nausicaa, yet immediately changes the word into the masculine *gender*.—*Broome.*

How far have we *genders* in English? The distinction of sex by wholly different words, such as Boy and Girl, Father and Mother, Horse and Mare, &c. is not *gender*. Neither are words like Manservant and He-goat, contrasted with Maidservant, She-goat, &c. The Latin words Genitrix=a mother, and Genitor=a father, give an approach to *gender* rather than *gender* itself. This is because the difference of sex, though shown by the syllables -or and -ic, is not shown in the inflection. . . . Contrast with this the words Domina=a mistress, and Dominus=a master. . . . It is evident that, if Genitrix is a specimen of *gender*, Domina is something more. It is a specimen of true *gender*.—*Dr. R. G. Latham, English Grammar for Classical Schools*, § 92.

Génder. *v. a.* Engender. *Rare.*

Hath the rain a father? or who hath begotten the drops of dew? out of whose womb came the ice? and the hoary frost of heaven, who hath *gendred* it?—*Job*, xxxviii. 28, 29.

Génerable. *adj.* Capable of being generated.

Others say, that the forms of particular words are *generable* and corruptible.—*Bentley, Sermons*, 6.

And with a *gen'ral's* love of conquest glows.
Addison, The Campaign.

Géneral. *adj.* [see Genus.]

1. Constituting a genus: (as opposed to *particular* and *special*).

They, because some have been admitted without trial, make that fault *general* which is particular.—*Whitgift.*

It is to our immortal countryman, Bacon, that we owe the broad announcement of this grand and fertile principle; and the developement of the idea, that the whole of natural philosophy consists entirely of a series of inductive generalizations, commencing with the most circumstantially stated particulars, and carried up to universal laws, or axioms, which comprehend in their statements every subordinate degree of generality; and of a corresponding series of inverted reasoning from *generals* to particulars, by which these axioms are traced back into their remotest consequences, and all particular propositions deduced from them; as well those by whose immediate considerations we rose to their discovery, as those of which we had no previous knowledge.—*Sir J. Herschel, Discourse on Natural Philosophy*, art. 96.

The function of naming, and particularly of *general* names, in induction, may be recapitulated as follows. Every inductive inference which is good at all, is good for a whole class of *cases*. . . . We can only secure its being remembered, or give ourselves even a chance of carrying in our memory any considerable number of such uniformities, by registering them through the medium of permanent signs; which (being, from the nature of the case, signs not of an individual fact, but of an uniformity, that is, of an indefinite number of facts similar to one another) are *general* signs; universals; *general* names, and *general* propositions. And here I cannot omit to notice an oversight committed by some eminent metaphysicians; who have said that the cause of our using *general* names is the infinite multitude of individual objects, which, making it impossible to have a name for each, compels us to make one name serve for many. This is a very limited view of the function of *general* names. Even if there were a name for every individual object, we should require *general* names as much as we now do. . . . It is only by means of *general* names that we can convey any information, predicate any attribute, even of an individual, much more of a class. Rigorously speaking we could get on without any other *general* names than the abstract names of attributes; all our propositions might be of the form 'such an individual object possesses such an attribute,' or 'such an attribute is always (or never) conjoined with such another attribute.' In fact, however, mankind have always given *general* names to objects as well as attributes, and indeed before attributes: but *the general* names given to objects imply attributes, derive their whole meaning from attributes; and are chiefly useful as the language by means of which we predicate the attributes which they connote.—*J. S. Mill, System of Logic*, b. iv. ch. iii. §§ 3-4.

2. Abstract.

A *general* idea is an idea in the mind, considered there as separated from time and place, and so capable to represent any particular being that is conformable to it.—*Locke.*

3. Public; relating to the common weal, or community at large.

Nor would we deign him burial of his men,
Till he disbursed at St. Colmeskill isle,
Ten thousand dollars to our *gen'ral* use.
Shakespear, Macbeth, i. 2.

Nor fail'd they to express how much they prais'd,
That for the *general* safety he despis'd
His own. *Milton, Paradise Lost*, ii. 481.

4. Not directed to any single object, or for any particular application or employment: (as 'a *general* servant,' opposed to *cook, lady's maid*, or a special and professed one).

If the same thing be peculiarly evil, that *general* aversion will be turned into a particular hatred against it.—*Bishop Sprat.*

5. Having relation to all.

Which to our *general* sire gave prospect large
Into his nether empire neighb'ring round.
Milton, Paradise Lost, iv. 143.

6. Lax.

(For that I knew it the most *general* way,)
To them to use your signet and your name.
Shakespear, Timon of Athens, ii. 2.

9. ? Generous.

She's *general*, she's free, she's liberall,
Of hand and purse she's open unto all;
She is no miserable hidebound wretch,
To please her friend at any time she'll stretch;
At once she can speak true or lie on either,
And is at home, abroad, and altogether.
Taylor (the Water-poet).

Général. *s.* [from the *adjective.*]

1. Whole; totality; main, without insisting on particulars.

In particulars our knowledge begins, and so spreads itself by degrees to *generals*.—*Locke.*

With *in*.

That which makes an action fit to be commanded or forbidden, can be nothing else, *in general*, but its tendency to promote or hinder the attainment of some end.—*Norris.*

2. The public; the vulgar: (with *the*).

Hath raised me from my bed; nor doth *the general*
Take hold on me; for my particular grief
Ingluts and swallows other sorrows.

The play, I remember, pleased not the million; 'twas caviare to *the general*; but it was as I received it, and others, whose judgment in such matters cried in the top of mine, an excellent play.—*Id., Hamlet*, ii. 2.

Undervaluing many particulars (which they truly esteemed), as rather to be consented to than that *the general* should suffer.—*Lord Clarendon, History of the Grand Rebellion*, b. v.

Generália. *s.* [Lat. plural neuter of *generalis.*] Generalities.

Science, therefore, following one cause to its various effects, while art traces one effect to its multiplied and diversified causes and conditions; there is need of a set of intermediate scientific truths, derived from the higher generalities of science, and destined to serve as the *generalia* or first principles of the various arts.—*J. S. Mill, System of Logic*, b. vi. ch. xi. § 5.

Generalíssimo. *s.* [Italian.] Supreme commander.

Is he? I see him coming—huzza! I'll blow him to the devil, if he were *generalissimo*.—*G. Colman the younger, The Poor Gentleman*, v. 2.

[*Généralissime*, French, from *general*. Addison, having termed Agamemnon *generalissimo* of the Grecian expedition, (Tatler, 152,) is reproved by Bishop Hurd with this reflection on the word: 'Instead of this cant and ludicrous term, he should have used the more noble one of *general*, or *commander in chief*.' (Addison's Works, edit. Hurd, vol. ii. 337.) The examples from Clarendon and Browne, given by Dr. Johnson, might have served to rescue the word from such a charge. The authorities of Sir Henry Wotton, Henry More, and South, which I add, further shew the serious manner in which the word is used. —*Todd.*]

Generálity. *s.*

1. State of being general; quality of including species or particulars; value of a generalization.

Because the curiosity of man's wit doth with peril wade farther in the search of things than were convenient, the same is thereby restrained unto such *generalities* as, everywhere offering themselves, are apparent to men of the weakest conceit.—*Hooker, Ecclesiastical Polity.*

These certificates do only in the *generality* mention the parties contumacies and disobedience.—*Ayliffe, Parergon Juris Canonici.*

2. Main body; bulk; common mass: (with *the*).

Necessity, not extending to *the generality*, but resting upon private heads.—*Sir W. Raleigh, Essays.*

By his own principles he excludes from salvation *the generality* of his own church; that is, all that do not believe upon his grounds.—*Archbishop Tillotson.*

They publish their ill-natured discoveries with a secret pride, and applaud themselves for the singularity of their judgement, which has found a flaw in what *the generality* of mankind admires.—*Id.*

Generalizátion. *s.* Act or process of grouping in a genus.

The original invention of such words would require a yet greater effort of abstraction, and *generalization*, than that of nouns adjective.—*A. Smith, On the Formation of Languages.*

Generalization [is] the act of comprehending under a common name several objects agreeing in some point which we abstract from each of them, and which that common name serves to indicate.—*Whately, Logic*, index.

For a few well-observed facts, rational deductions, and cautious *generalisations*, we have whole clouds of systems and doctrines, of speculations and fancies, built merely on the workings of the imagination, and the labours of the closet.—*Lawrence, Lectures*, iii. (Ord MS.)

In our inquiries into the nature of the inductive process, we must not confine our notice to such *generalizations* from experience as profess to be universally true. There is a class of inductive truths avowedly not universal; in which it is not pretended that the predicate is always true of the subject; but the value of which, as *generalizations*, is nevertheless extremely great. An important portion of the field of inductive knowledge does not consist of universal truths, but of approximations to such truths; and when a conclusion is said to rest on probable evidence, the premises it is drawn from are usually *generalizations* of this sort.—*J. S. Mill, System of Logic*, b. iii. ch. xxiii. § 1.

The class of fallacies of which we are now to speak is the most extensive of all: embracing a greater number and variety of unfounded inferences than any of the other classes, and which it is even more difficult to reduce to subclasses or species. If the attempt made in the preceding books to define the principles of well-grounded *generalization* has been successful, all *generalizations* not conformable to those principles might, in a certain sense, be brought under the present class: when however the rules are known and kept in view, but a casual lapse committed in the application of them, this is a blunder, not a fallacy. To entitle an error of *generalization* to the latter epithet, it must be committed on principle; there must lie in it some erroneous general conception of the inductive process; the legitimate mode of drawing conclusions from observation and experiment must be fundamentally misconceived.—*Ibid.* b. v. ch. v. § 1.

Généralize. *v. a.*

1. Arrange in a genus.

Sometimes the name of an individual is given to a general conception, and thereby the individual in a manner *generalised*.—*Reid.*

New opinions, founded on a legitimate process of observation and inference, are generally worked out in solitude by persons of studious and reflective habits. . . . Respecting opinions so formed and so propagated, no general proposition can be laid down. Their character as to soundness will depend on the peculiarities of the several persons with whom they originate; and the reception which they meet with from the public will be determined by its capacity to form a judgment on the matter. For example: the existence of a man with such mighty powers of discovery and demonstration as Newton, and the recognition of his doctrines among his contemporaries, depend upon causes which do not admit of being *generalized*.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. ix. § 1.

So, too, the proper relation between the people and their rulers, and the amount of liberty which the people should possess, instead of being inductively *generalized* from an historical inquiry into the circumstances which had produced most happiness, might, in the opinion of Hutcheson, be ascertained by reasoning from the nature of government, and from the ends for which it was instituted.—*Buckle, History of Civilization in England*, vol. ii. ch. vi.

The two general functions of the article definite equally in Greek and English are, 1st, to individualize, as, e.g. 'It is not any sword that will do; I will have The sword of my father;' 2nd, the very opposite function, viz. to *generalize* in the highest degree—a use which our best English grammars wholly overlook—as, e.g. 'Let The sword give way to The gown;' not that particular sword, but every sword.—*De Quincey, Style.*

2. Invest with a character of generality in the sense of latitude or laxity.

There would be an anterior question. We should first be called to do, in our law and policy, what has been already done in reference to personal qualifications for office; to *generalise* and relax our obligation; to contemplate, in what is deemed a liberal spirit, the advancement, not merely of the interests of the Church, but of religion at large, under the different forms of it bearing the Christian name.—*Gladstone, The State in its Relations with the Church*, ch. viii.

Généralize. *v. n.* Indulge or exercise one's self in generalizing.

(For example see Generalizing, *part. adj.*)

Généralizer. *s.* One who generalizes.

The most vivid imagination of the boldest *generaliser* or speculator upon the unity of organisation in the animal kingdom could never have divined that the lernæa and the cirriped were at one period of their lives locomotive animals, swimming about under very similar forms, and by almost identical natatory instruments.—*Owen, Lectures on Comparative Anatomy*, ch. xiii.

Généralizing. *part. adj.* Tending to, or consisting in, generalization.

The reviewer holds that we pass from special experiences to universal truths in virtue of 'the inductive propensity—the irresistible impulse of the mind to *generalize* ad infinitum.' I have already given reasons why I cannot adopt the former expression; but I do not see why space, time, number, cause, and the rest, may not be termed different forms of the impulse of the mind to *generalize*. But if we put together all the fundamental ideas as results of the *generalizing* impulse, we must still separate them as different modes of action of that impulse, showing themselves in various characteristic ways in the axioms and modes of reasoning which belong to different sciences. The *generalizing* impulse in one case proceeds according to the idea of space; in another, according to the idea of mechanical cause; and so in other subjects.—*Whewell, History of Scientific Ideas*, note on ch. x.

Généralizing. *verbal abs.* Act of one who generalizes; process by which generalizations are made.

The operations of the understanding by which we are enabled to form general conceptions . . . appear to me to be three: First, the resolving . . . a subject into its known attributes and giving a name to each. . . . Secondly, the observing of one or more such attributes to be common to many subjects. The first is by philosophers called abstraction; the second may be called *generalising*; but both are commonly included under the name of abstraction. It is difficult to say which of them goes first. . . . It seems . . . that we cannot generalise without some degree of abstraction; but, I apprehend, we may abstract without *generalising*. . . . A third operation . . . [is that] by which . . . we form abstract notions of the genera and species of things.—*Reid, Inquiry into the Human Mind*, essay v. ch. iii.

Généralizing. *adv.* In a general manner.

1. Without specification or exact limitation.

Generally we would not have those that read this work of Sylva Sylvarum, account it strange that we have set down particulars untried.—*Bacon, Natural and Experimental History.*

2. In the main; without minute detail; in the whole taken together.

Generally speaking, they live very quietly.—*Addison, Guardian.*

Generally speaking, they have been gaining ever since, though with frequent interruptions.—*Swift.*

How many sacraments hath Christ ordained in his church?—Two only, as *generally* necessary to salvation, that is to say baptism and the supper of the Lord.—*Church Catechism.*

Géneralness. *s.* Attribute suggested by General; wide extent, though short of universality; frequency; commonness: (Generality *commoner*).

They had, with a general consent, rather springing by the *generalness* of the cause than of any artificial practice, set themselves in arms.—*Sir P. Sidney.*

Géneralship. *s.* Conduct of one who commands an army: (applied, generally, to good or bad management or tact).

Cicero laughs, in one of his letters, at his *generalship.*—*Bolingbroke, Letters on History.*

This is looked upon in no other light, but as an artful stroke of *generalship* in Trim to raise a dust.—*Sterne.*

The king was still only a learner of the military art. He acknowledged, at a later period, that his success on this occasion was to be attributed, not at all to his own *generalship*, but solely to the valour and steadiness of his troops.—*Macaulay, Critical and Historical Essays, Frederic the Great.*

Géneralty. *s.* Whole; totality. *Rare.*

The municipal laws of this kingdom are of a vast extent, and include in their *generalty* all those several laws which are allowed as the rule of justice and judicial proceedings.—*Sir M. Hale.*

Génerant. *s.* [see Generate.] Begetting or productive power.

Some believe the soul made by God, some by angels, and some by the *generant*: whether it be immediately created or traduced hath been the great ball of contention.—*Glanville, Scepsis Scientifica.*

In such pretended generations the *generant* or active principle is supposed to be the sun, which, being an inanimate body, cannot act otherwise than by his heat.—*Ray.*

Génerate. *v. a.* [Lat. *generatus*, pass. part. of *genero*; pres. part. *generans, -antis*; *generatio, -onis*; *generabilis* = capable of being generated or engendered.]

1. Beget; propagate.

Those creatures which being wild *generate* seldom, being tame, *generate* often.—*Bacon, Natural and Experimental History.*

God created the great whales, and each
Soul living, each that crept, which plenteously
The waters *generated* by their kinds;
And every bird of wing after his kind;
And saw that it was good, and blessed them.
Milton, Paradise Lost, vii. 391.

2. Cause; produce.

Sounds are *generated* where there is no air at all. *Bacon.*

Whatever *generates* a quantity of good chyle, must likewise *generate* milk.—*Arbuthnot, On the Nature and Choice of Aliments.*

The modes of consciousness called pressure, motion, sound, light, heat, are effects produced in us by agencies which, as otherwise expended, crush or fracture pieces of matter, *generate* vibrations in surrounding objects, cause chemical combinations, and reduce substances from a solid to a liquid form. —*Herbert Spencer, Elements of Psychology.*

When impressions have been so often experienced in conjunction, that each of them calls up readily and instantaneously the ideas of the whole group, those ideas sometimes melt and coalesce into one another, and appear not several ideas, but one; in the same manner as when the seven prismatic colours are presented to the eye in rapid succession, the sensation produced is that of white. But as in this last case it is correct to say that the seven colours when they rapidly follow one another *generate* white, but not that they actually are white; so it appears to me that the complex idea, formed by the blending together of several simpler ones, should, when it really appears simple, (that is when the separate elements are not consciously distinguishable in it,) be said to result from, or be *generated* by, the simple ideas, not to consist of them. Our idea of an orange really consists of the simple ideas of a certain colour, a certain form, a certain taste and smell, &c., because we can by interrogating our consciousness, perceive all these elements in the idea. But we cannot perceive, in so apparently simple a feeling as our perception of the shape of an object by the eye, all that multitude of ideas derived from other senses, without which it is well ascertained that no such visual perception would ever have had existence; nor, in our idea of extension, can we discover those elementary ideas of existence, derived from our muscular frame, in which Dr. Brown has shown it to be highly probable that the idea originates. These therefore are cases of mental chemistry: in which it is proper to say that the simple ideas *generate*, rather than that they compose, the complex ones.—*J. S. Mill, System of Logic*, b. vi. ch. iv.

Generátion. *s.*

1. Act of begetting or producing.

Seals make excellent impressions; and so it may be thought of sounds in their first *generation*: but then the dilation of them, without any new sealing, shews they cannot be impressions.—*Bacon, Natural and Experimental History.*

If we deduce the several races of mankind in the several parts of the world from *generation*, we must imagine the first numbers of them, who in any place agree upon any civil constitutions, to assemble as so many heads of families whom they represent.—*Sir W. Temple.*

The natural functions are those which without the intervention of the will operate on their proper occasions to preserve the bodies of animals; they are digestion, absorption, nutrition; to which was added *generation*. The animal functions are those which involve perception and will, by which the animal is distinguished from the vegetable; they are sensibility, locomotion, and voice.—*Whewell, History of Scientific Ideas*, b. ix. ch. iii.

2. Family; race.

Y'are a dog.—
Thy mother's of my *generation*: what's she, if I be a dog? *Shakespear, Timon of Athens*, i. 1.

A marvellous number were excited to the conquest of Palestine, which with singular virtue they performed, and held that kingdom some few *generations*. —*Sir W. Raleigh, Essays.*

5. Age.

By some of the ancients a *generation* was fixed at an hundred years; by others at an hundred and ten; by others at thirty-three, thirty, twenty-five, and twenty: but it is remarked, that the continuance of *generations* is so much longer as they come nearer to the more ancient times.—*Calmet.*

Every where throughout all *generations* and ages of the Christian world, no church ever perceived the word of God to be against it.—*Hooker, Ecclesiastical Polity.*

Genéric. *adj.* Relating to, or consisting in, the classification of objects under genera, as opposed to species.

Though wine differs from other liquids, in that it is the juice of a certain fruit; yet this is but a general or *generick* difference; for it does not distinguish wine from cyder or perry: the specifick difference of wine, therefore, is its pressure from the grape.—*Watts, Logick.*

These men—whom modern writers set down as the Sophists, and denounce as the moral pestilence of their age—were not distinguished in any marked or *generic* way from their predecessors.—*Grote, History of Greece*, pt. ii. ch lxvii.

Porto Santo, for instance, is a very small island (not more than seven miles in length), yet the number of endemic species which it includes is so perfectly astounding that it may be appropriately termed a *generic* area of radiation.... It would seem, when viewed on a broad scale, as if particular districts throughout the world had been made as it were the special fields for the exercise of the creative force,—or that, *generic* areas of radiation were part of the elementary design. Thus, Professor E. Forbes records his belief that most, if not indeed all, of the terrestrial animals and plants now inhabiting Britain are members of specific centres beyond its bounds,—they having migrated to it over a continuous land, before, during, or after the glacial epoch. Hence, since the greater number of them are supposed to have come from the central Germanic plains, we may assume that those plains were one of the primary areas of diffusion of a large mass of created beings; Spain may have been another; and certainly all evidence would tend to prove that this vast Atlantic province was, also, well stocked with aboriginal forms.—*T. V. Wollaston, On the Variation of Species*, ch. v.

Genérical. *adj.* Same as Generic.

The word consumption being applicable to a proper and improper, to a true and bastard, consumption, requires a *generical* description quadrate to both.—*Harvey, Discourse of Consumptions.*

Pray for others in such forms, with such length, importunity, and earnestness, as you use for yourself; and you will find all little ill-natured passions die away, your heart grow great and *generous*, delighting in the common happiness of others, as you used only to delight in your own.—*Law.*

In the following the import is intentionally ambiguous or equivocal.

Such was Roscommon, not more learned than good,
With manners *generous* as his noble blood. *Pope.*

3. Used of *animals*. High-spirited; showing blood or breeding; daring; courageous. *Obsolete.*

Génesis. *s.* [Gr. γένεσις.]

1. Generation; the first book of the Pentateuch, which begins with the account of the creation of the world.

The first [book of Moses] is called *Genesis*, because it contains the history of the creation of the world, with which it begins; and the genealogy of the patriarchs down to the death of Joseph, where it ends.—*Bishop Patrick, Paraphrases and Commentaries on the Old Testament, On Genesis.*

2. In *Biology.* Evolution.

Having concluded what constitutes an individual, we are in a position to deal with the multiplication of individuals. For this, the title *genesis* is here chosen, as being the most comprehensive title—the least specialized in its meaning. By some biologists, generation has been used to signify one method of multiplication, and reproduction to signify another method; and each of these words has been thus rendered in some degree unfit to signify multiplication in general. . . . Up to quite recent times, it was believed, . . . that all the various processes of multiplication observable in different kinds of organisms, have one essential character in common; it was supposed that in every species, the successive generations are alike. It has now been proved, however, that in plants, and in numerous animals, the successive generations are not alike; that from one generation there proceeds another whose members differ more or less in structure from their parents; that these produce others like themselves, or like their parents, or like neither; but that eventually, the original form re-appears. Instead of there being, as in the cases most familiar to us, a constant recurrence of the same form, there is a cyclical recurrence of the same form. These two distinct processes of multiplication may be aptly termed homo-*genesis* and hetero-*genesis*. Unfortunately the word hetero-*genesis*, has been already used as a synonyme for spontaneous generation. Save by those few who believe in spontaneous generation, however, little objection will be felt to using the word in a sense that seems much more appropriate. The kind of *genesis*, once supposed to be universal, in which the successive generations are alike, is always sexual *genesis*; or, as it has been otherwise called—gamo-*genesis*. In every species of organism which multiplies by homo-*genesis*, each generation consists of males and females; and from the fertilized germs they produce, the next generation of similar males and females arises. . . . In ovo-viviparous *genesis*, there is an internal incubation; and though the young are in this case finally detached from the parent in the shape of eggs, they do not leave the parent's body until after they have assumed something like the parental form. Looking around, we find that homo-*genesis* is universal among the vertebrata: there is no known vertebrate animal but what arises from a fertilized germ, and unites into its single individuality the whole products of this fertilized germ.—*Herbert Spencer, Inductions of Biology*, ch. vii.

Almost losing, though it ultimately does, the marks of its inferential *genesis*; it needs but to watch the use of new metaphors and the coining of new words, to see under a disguised form, the same fundamental intuition of likeness of relations.—*Id., First Principles*, § 43.

The *genesis* of all other modes of force from chemical action, scarcely needs pointing out.—*Id., The Correlation and Equivalence of Forces.*

Génet. *s.* Small-sized Spanish horse.

You'll have your nephews neigh to you; you'll have coursers for cousins, and *genets* for germanes.—*Shakespear, Othello*, i. 1.

Dryden, Translation of Juvenal.

Génet. *s.* [?] Animal akin to weazels so called.

The next subdivision of the Viverræ are the *genets*. . . . From their slender and elongated body, pointed muzzle, . . . we might feel inclined to refer them to the family of the martens. But a more attentive examination, and a more detailed study of their organization, prove their approximation to the civets, by the side of which they are accordingly arranged in a particular group.—*Translation of Cuvier's Règne Animal.*

When *genius* in the singular means a separate spirit or demon, good or bad, the plural is *genii*; when it denotes mental abilities, or a person eminently possessed of these, the plural is *geniuses*.—*Campbell, Philosophy of Rhetoric*, b. ii. ch. iii. (Ord MS.)

Géntle. *adj.* [Fr. *gentil*; from Lat. *gentilis* = connected with, or belonging or attached to, a *gens*; gen. *gentis*; plural *gentes.* Like clan, sept, house, tribe, and several other words of like import, *gens* is a difficult word to render in another language, so much so, that in many works upon the history and constitution of Rome it is left untranslated, and the division to which, for example, Julius Cæsar or Cornelius Sylla belonged, is called the Julian or the Cornelian *gens.* Connection, however, with some *gens* or other was essential to the possession of the highest status in the way of Roman citizenship. Hence, as a series of secondary meanings, *pedigree, lineage, purity of blood, good birth, descent, breeding*, and the like. It is from *gentilis* in this sense, introduced into our own language from the French, that *gentle* = gentleman, and its numerous congeners, are derived. For *gentilis* with another signification, see Gentile.]

Géntleman. *s.* [see Gentle; a *gentleman* being, in the first instance, a member of one of the classes or divisions of the body politic invested with the rights, privileges, or characteristics in general of a *gens*, or some like honourable class. The test of such a relation might be either actual descent, or certain rights and privileges, e.g. that of bearing coat armour, holding certain offices or professions. As long as the criterion is of this kind, the application of the term is comparatively easy; and a *gentleman* is the member of a definite class, the only question being as to the extent to which he has all its characteristics.

Thus far the contrast is between the *gentleman* and the members of the classes below him. As compared, however, with a *nobleman*, he is in a somewhat subaltern position, the *gentry* being often opposed to the *nobility*; though, in reality, every *nobleman* is, *a fortiori*, a gentleman, just as every officer is a soldier; though expressions to the contrary, founded upon refinements as to the characteristics of the class, are common enough on both sides; e.g.

'*Lord* A. is no *gentleman*;' '*Captain* B. is no *soldier*.'

This explains the following definition, which stands as in the previous editions:—]

1. Man of birth; man of extraction, though not noble.

Cain became a churl from the curse of God, and Seth a *gentleman* through his father and mother's blessing.—*Dame Juliana Berners, Treatise on Coat Armour*: 1486.

A civil war was within the bowels of that state, between the *gentlemen* and the peasants.—*Sir P. Sidney.*

But young and brave, and of a family
Ancient and noble. *Otway, Orphan.*

Makes *gentlemen*, and that your high degree
Is much disparag'd to be match'd with me. *Dryden.*

He is so far from desiring to be used as a *gentleman*, that he desires to be used as the servant of all. —*Law.*

2. The secondary meanings of *gentle* are still more complicated. Whatever in the way of gracefulness or graciousness is either actually connected with, or supposed to be deduced from, the good blood, or the favourable social position, of a gentleman —whatever, too, is suggested by the word *gentle* or *genteel*, may pass as an element in the definition of a gentleman. Hence, there are, in fact, two different words; a member of the class of gentry being one thing, an individual with the characteristics of a gentleman being another. The import of the word, then, varies with the condition of the speaker; the practical rule being that every one, who has any pretensions to it at all, whoever else he may exclude, always includes himself. This tendency to laxity of import is favoured by the ordinary colloquial use of the negative expression '*no gentleman*,' which means a great deal more than *not a gentleman*. In many cases a euphemism for *blackguard*, it has a tendency to dichotomize the whole class of men, making them all either gentlemen or the very opposite. The correlative to *gentleman* in the way of sex is Lady rather than gentlewoman. Lady, however, has a similar relation to Lord.

The dictionary meaning is marked out in a broad, blunt way, and probably includes all that was originally necessary for the correct employment of the term: but in process of time so many collateral associations adhere to words, that whoever should attempt to use them with no other guide than the dictionary, would confound a thousand nice distinctions and subtle shades of meaning which dictionaries take no account of; as we notice in the use of a language in conversation or writing by a foreigner not thoroughly master of it. The history of a word, by showing the causes which determined its use, is in these cases a better guide to its employment than any definition; for definitions can only show its meaning at the particular time, or at most the series of its successive meanings, but its history may show the law by which the succession was produced. The word *gentleman*, for instance, to the correct employment of which a dictionary would be no guide, originally meant simply a man born in a certain rank. From this it came by degrees to connote all such qualities or adventitious circumstances as were usually found to belong to persons of that rank. This consideration at once explains why in one of its vulgar acceptations it means any one who lives without labour, in another without manual labour, and in its more elevated signification it has in every age signified the conduct, character, habits, and outward appearance, in whomsoever found, which, according to the ideas of that age, belonged or were expected to belong to persons born and educated in a high social position.—*J. S. Mill, System of Logic*, b. iv. ch. v. § 1.

3. Term of complaisance: (sometimes *ironical.*)

The same *gentlemen* who have fixed this piece of morality on the three naked sisters dancing hand in hand, would have found out as good a one had there been four of them sitting at a distance, and covered from head to foot.—*Addison.*

You see among men, who are honoured with the common appellation of *gentlemen*, so many contradictions to that character, that it is the utmost ill-fortune to bear it.—*Tatler*, no 66.

4. One who attends the person, or regulates the ceremonial, of a man of rank: (used sometimes *adjectivally*, the page and esquire, as compared with the noble and knight, being its nearest analogues.)

'Let me have a solid answer, and in a *gentlemanlike* style; and it may have the effect which you so much desire of bringing me over to your church.'—*Macaulay, History of England*, ch. vi.

Géntlemanly. *adj.* [*-ly* = *-like.*] Gentlemanlike, of which it is a secondary form.

For a distinction between the two compounds, see the second extract under Gentlemanship. It implies that a gentleman*like* person may be anything but a gentleman in reality, being merely an imitation of one; whereas to be gentleman*ly* is to have the true and actual character of gentility. Whether the distinction be worth encouraging or neglecting, the identity in the way of derivation should be remembered.

He holdeth himself a gentleman, and scorneth to work, which, he saith, is the life of a peasant or churl; but enureth himself to his weapon, and to the *gentlemanly* trade of stealing!—*Spenser, View of the State of Ireland.*

Nor was the standard at Oxford higher. Génus. *s.* [Lat. pl. *genera*; whence *generalis* = general.] *Genus*, especially in its oblique form, *gener-is*, &c., is the fundamental term upon which General, Generalize, &c., have been framed; and, as such, though a Latin rather than an English word, commands attention. It is the basis of a class of words which are not only important in themselves, but have a special bearing on language. The difference between *general* (an approximate synonym for *common*) and *proper* (or *individual*) names, to go no further, indicates this. The question as to its import falls under two heads; the main word with which it is connected being Species.

It is of Greek origin; the Greek for *genus* being γένος; the Greek for species being εἶδος.

Γένος is connected with the root of γίγ-νομαι, which appears in a simpler form in γεν-ν-άω, and also in the Latin *genus* (the word before us) and *gen-ero*, &c.; *gi-g-no* (i.e. with the interposed *g*) being also a Latin word. Word for word, it is also the English *kin*, *kin-d*; a difference in *genus* being, presumptively, a difference of *kind*, as opposed to one of degree; or, *mutatis mutandis*, a difference of species, respect being had to Varieties. This points to a relation in the way of origin, or connection in the way of pedigree, being the leading notion with *genera*, rather than with any perceptible qualities independent of community of descent.

Species, on the other hand, is the Latin for εἶδος, both being connected with words indicating *sight*, or the *thing seen*; Latin *specio* = view; Greek εἶδω = see. This points to a relation in the way of a connection in physical or visible properties.

On the relation of *genus* to *species* turns the leading principle as to the heading of the two great divisions under which the meanings are to be classified. The first contains the cases where *genus* and species each mean simply—

1. Group; class. A group or class may contain others; inasmuch as one class may contain another: e.g. the class of *Englishmen* is contained in that of *men*, and that of *men* in that of *animals*, that of *animals* in that of *organized* beings, and so on in the way of both ascent and descent; *Londoners* belonging to a group subordinate to that of *Englishmen*. A term, such as *object of thought*, which includes everything, and which can be subordinated to nothing else, is the name of the highest (*summum*) genus. A single individual so separated from its nearest congeners as to form a class by itself gives the lowest (*infimum*) genus. All the others are subalternate, or Subaltern; each being larger than the one below it, and smaller than the one above it.

In this way *species* and *genus* both mean the same thing, i.e. class; the only point worth noting being that, wherever the two come together, *species* is always the lower, and never the higher, denomination; to which it may be added that, after certain visible outward signs of connection have disappeared, there is no chance of *species* ever being used.

Thus far both *genus* and *species* denote a mental rather than a real classification; i.e. meaning group or class, *however determined*, with the only reservation that *genus* is the higher denomination. If from (say) the term *Englishman* in the foregoing series of illustrations we descend to *Londoner*, we *specialize*; if from the same term we ascend to *animal*, we *generalize*.

A general idea is called by the schools *genus*, and it is one common nature agreeing to several other common natures; so animal is a *genus*, because it agrees to horse, lion, whale, and butterfly.—*Watts, Logick.*

Observing many individuals to agree in certain attributes, we refer them all to one class, and give a name to the class.... When a class is very large, it is divided into subordinate classes;... the higher class is called a *genus* or kind; the lower a species or sort of the higher.... In this distribution of things into *genera* and species it is evident that the name of the species comprehends more attributes than the name of the *genus*.... Hence, it is an axiom in logic—that the more extensive any general term is, it is the less comprehensive, and, on the contrary, the more comprehensive, the less extensive. Thus, in the following series of subordinate general terms—Animal—Man—Frenchman—Parisian, every subsequent term comprehends in its signification all that is in the preceding and something more; and every antecedent term extends to more individuals than the subsequent.—*Reid, Essay on the human Mind*, ch. i.

2. Here, *species* is something more than a subaltern *genus*, inasmuch as it is the name of a class which contains individuals connected, or supposed to be connected, by community of descent; its chief use being in *Zoology*. It is physical rather than mental.

Nothing has a greater tendency to lead to the mistake just noticed, and thus to produce undetected verbal questions and fruitless logomachy, than the prevalence of the notion of the realists, that *genus* and species are some real things, existing independently of our conceptions and expressions.... There is one circumstance which ought to be noticed, as having probably contributed not a little to foster this error: I mean, the peculiar technical sense of the word 'species' when applied to organized beings. It has been laid down in the course of this work, that when several individuals are observed to resemble each other in some point, a common name may be assigned to them indicating (implying, or 'connoting') that point,—applying to all or any of them so far forth as respects that common attribute,—and distinguishing them from all others; as, e.g. the several individual buildings, which, however different in other respects, agree in being constructed for men's dwelling, are called by the common name of 'House:' and... as we select at pleasure the circumstance that we choose to abstract, we may thus refer the same individual to any one of several different species, and again, the same species, to one *genus* or to another, according as it suits our purpose; whence it seems plainly to follow that *genus* and species are no real things existing independent of our thoughts, but are creatures of our own minds. Yet in the case of species of organized beings, it seems at first sight as if this rule did not hold good.—*Whately, Logic*, b. iv. ch. v. § 1.

Two courses have been followed in providing names for these subordinate groups. 1. The original *genera* (considering the case of *genera* in the first place) have been preserved (if well founded); and the lower groups have been called sub*genera*, sections, subsections, divisions, &c.: and the original names of the *genera* have been maintained for the purpose of nomenclature, in order to retain a convenient and stable language. But when these subordinate groups are so well defined and so natural, that except for the convenience of language, they might be made good *genera*, there are given also to these subordinate groups, substantive or substantively-taken adjective names. When these subordinate groups are less defined or less natural, either no names at all are given, and they are distinguished by figures or signs such as *, **, or § 1, § 2, &c., or there are given them mere adjective names. Or, 2, To regard these intermediate groups between species and the original *genera*, as so many independent *genera*; and to give them substantive names, to be used in ordinary botanical nomenclature. Now the second course is that which has produced the intolerable multiplication of *genera* in modern times.... In a purely scientific view it matters little if the orders are converted into classes or alliances, the *genera* into orders, and the sections or subsections into *genera*: their relative importance does not depend on the names given to them, but on their height in the scale of comprehensiveness.... If, independently of the inevitable increase of *genera* by new discoveries, such old ones as Ficus, Begonia, Arum, Erica, &c., are divided into ten, twenty, thirty, or forty independent *genera*, with names and characters which are to be recollected before any one species can be spoken of;—if *genera* are to be reckoned by tens of thousands instead of by thousands;—the range of any individual botanist will be limited to a small portion of the whole field of the sciences.—*Whewell, History of Scientific Ideas.*

It is surprising that the translator should find any difficulty respecting the two well-known words εἶδος and γένος, of such frequent employment in the writings of Aristotle, and so familiar to both naturalists and metaphysicians. It is true they are sometimes used rather loosely in the History of Animals, but this seldom gives rise to any difficulty. The word εἶδος, in the language of Aristotle, signifies not merely form but species, and also the essence of a thing, that which constitutes it what it is. As to γένος, there is no difficulty whatever. Aristotle knew as well as we what classes and orders mean, though he did not use our phraseology; but he speaks of a summum *genus* and subaltern *genera*. Thus, birds form an order, or summum *genus*, and palmipeds are a subaltern *genus*.—*Natural History Review.*

Whatever resembles the *genus* Rose more than it resembles any other *genus*, does so because it possesses a greater number of the characters of that *genus*, than of the characters of any other *genus*.—*J. S. Mill, System of Logic.*

Geocéntric. *adj.* [Gr. γῆ = earth, κέντρον = point, centre.] Having the earth as a centre.

Arithmetic and geometry have long been standard portions of the education of cultured persons throughout the civilized world; and hence all such persons have been able to accept and comprehend those portions of science which depend upon the idea of space: for instance, the doctrine of the globular form of the earth, with its consequences, such as the measures of latitude and longitude:—the *heliocentric* system of the universe in modern, or the *geocentric* in ancient times;—the explanation of the rainbow; and the like.—*Whewell, History of Scientific Ideas.*

Géode. *s.* [?] In *Geology*. Concretion, generally of an oval shape, containing a smaller one lying loose within; the Ætites (from Gr. ἀετος eagle) = and Eaglestone of the older mineralogists.

Nothing except an outer wall and foss remains; on part of which is a vast stratum of ferruginous *geodes*.—*Pennant, Journey from Chester to London*, p. 402. (Rich.)

Geodésical. *adj.* Connected with, relating to, or consisting in, Geodesy.

Entering the naval service as a cadet in 1805, Zahrtmann served as a lieutenant in many arduous and perilous services during the remaining years of the old war. At the general peace he betook himself entirely to *geodesical* and hydrographic labours, and was employed in the construction of an arc of the meridian.—*Sir R. I. Murchison, Address to the Geographical Society*, 1853.

Geódesy. *s.* [Gr. γῆ = earth, δαίω = divide, Geometrical, or mathematical, or scientific geography; surveying of the earth's surface with special reference to the divisions in the way of degrees (of lati-

tude or longitude) and minutes; the measurement of elevations.

Geodesy is that branch of applied mathematics which determines the figures and areas of large portions of the earth's surface, the general figure of the earth, and the variations of the intensity of gravity in different regions, by means of direct observation and measurement.—*English Cyclopædia, Arts and Sciences Division*, in voce.

Geodístic. *adj.* Same as Geodesical.

This year these different undertakings will be continued, and signals will be fixed for the measurement of the parallel to the east of Madrid, with the intention of making, concurrently with this work, simultaneous and reciprocal observations to determine the *geodistic* level, and settle with accuracy the elevation of Madrid above the Mediterranean, presumed at present upon the most received existing calculations to be 660 mètres, which is, perhaps, within ten inches of the truth.—*Lord Ashburton, Address to the Geographical Society*, May 26, 1862.

Geógnostic. *adj.* Relating to Geognosy.

(For example see extract under Geology.)

Geógnosy. *s.* [Gr. γῆ = earth, γνῶσις = knowledge, from γνόω = know.] Knowledge, or study, of the structure of the crust of the earth in respect to the large mineral masses. See Geology.

Geognosy, less intent upon inquiring into the primordial state of the globe, is contented with observing, collecting, and arranging simple facts, in order to ascertain what can be known, respecting the relative situation and ages of mineral substances.—*Rees, Cyclopædia.*

Geógrapher. *s.* One who describes or studies the earth geographically.

A greater part of the earth hath ever been peopled than hath been known or described by *geographers.*—*Sir T. Browne.*

The bay of Naples is called the Crater by the old *geographers.*—*Addison.*

From sea to sea, from realm to realm I rove,
And grow a meer *geographer* by love. *Tickell.*

Geográphical. *adj.* Relating, or belonging, to geography.

When we come to *geographical* knowledge, in the proper sense of the word, we find it surprisingly scanty, even at the close of the sixteenth century. It had not, however, been neglected, so far as a multiplicity of books could prove a regard to it. Ortelius, in his Theatrum Orbis Terrarum (the first edition of which was in 1570, augmented afterwards by several maps of later dates), gives a list of about 150 *geographical* treatises, most of them subsequent to 1560. His own work is the first general Atlas since the revival of letters, and has been justly reckoned to make an epoch in geography, being the basis of all collections of maps since formed, and deserving, it is said, even yet to be consulted, notwithstanding the vast progress of our knowledge of the earth.—*Hallam, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth Centuries*, pt. ii. ch. viii. §§ 51, 52.

Geográphically. *adv.* In a geographical manner; according to the rules of geography.

Minerva lets Ulysses into the knowledge of his country; she *geographically* describes it to him.—*Broome, On the Odyssey.*

Geógraphy. *s.* [Gr. γεωγραφία = description of the earth; γῆ = earth, and γράφω = write, describe.] Description or investigation of the earth, with special respect to its divisions, whether physical or political, and the details of its configuration; Geognosy relating chiefly to its mineral composition, and Geology to its history, and the forces by which its changes were effected. See Geology.

Olympus is extolled by the Greeks as attaining unto heaven; but *geography* makes slight account hereof, when they discourse of Andes or Teneriff.—*Sir T. Browne, Vulgar Errours.*

(See also extract under Geological.)

Geológical. *adj.* Relating to, connected with, or consisting in, geology.

The Annulosa have not hitherto been sufficiently regarded in the great questions of zoological *geography.* But especially have they been ignored during that most significant of considerations which has been so ably brought forward of late years by some of our keenest observers—namely, the distribution of animals, as affected by *geological* changes on the earth's surface. . . . We cannot doubt that there is much to be discovered in the past history of insect dissemination, which would tend, when rightly interpreted, to explain many of the occult phenomena of the present day; and we may be equally satisfied that this cannot by any possibility be attempted without the assistance of geology. . . . During my researches in mountain tracts, I have usually remarked that the highest points of land either teem with life, or else are perfectly barren. My own experience would certainly tend to prove that, in a general sense, one or the other of these extremes does almost constantly obtain. And, although I would not wish to dogmatize on phenomena which may in reality be explicable on other hypotheses, it would perhaps be worth while to enquire whether the *geological* movements of subsidence and elevation will not afford some clue to the right interpretation of them. Mountain-chains also are barriers; but it may happen that they have not been so from the beginning—as in instances, for example, where they have been gradually upraised during periods *geologically* recent.—*T. V. Wollaston, On the Variation of Species*, ch. v.

Geológically. *adj.* In a geological manner, or manner explained by geology.

(For example see extract under Geological.)

Geólogist. *s.* One who studies geology.

The *geologist* who would interpret the grand phænomena of the earth's crust apart from statical and dynamical knowledge, and without the help which the chemist, mineralogist, anatomist, zoologist, and botanist can afford him, stands a fair chance of leaving his problems unsolved.—*Wollaston, On the Variation of Species*, ch. v.

Geólogy. *s.* Investigation of the history of the earth, as deduced from the phenomena of its existing crust, and a calculation of the forces by which the changes that produced it were effected. Different from Geognosy in the extent to which stress is laid upon the *causes* rather than the *results*; and from Geography in its historical, rather than its formal, bearing. This, with *geography*, gives us the best, perhaps the typical or standard, illustration of the compounds in *-logy* and *-graphy*. The former implies a principle, power, or force; the latter a simple statement of phenomena. That the line of demarcation between the two is by no means accurately defined, is well known to those who work on both sides. Many *geologists* are chiefly *geographers*, and many *geographers*, *geologists*. Yet the difference between a description and a calculation of forces which would give the phenomena described, is decided. The extent to which the two series of compounds run into one another is shown in two classes of names: (1) those that were cultivated before the two elements had a definitely separate import: (2) those that have been developed but lately, e.g. between Ethnography and Ethnology, there is no such distinction as *geography* and *geology*. As a general rule, however, *-logy* implies the calculation of forces and coincides with *principle*; *-graphy* with *description*, and means a statement of phenomena.

A third element, *-nomy*, is usefully brought under notice when this distinction is illustrated. The element *-nomy* agrees with *-logy* more than with *-graphy*. There is no such science as *astrography*; though, word for word, this is as good Greek or English as either of the other two. The words that exist are *astronomy* and *astrology*; each of which, for different reasons, are more connected with *-logy* than with *-graphy*. The one has the legitimately calculational, the other the illegitimately calculational, element. Neither, however, means *description*, as *-graphy* means description in *geography*. The excuse for the length of these remarks is the extent to which forms in *-logy* and *-graphy* are confounded, and (in the formation of new terms) forms in *-nomy* neglected.

It was impossible that men of inquiring tempers should not have been led to reflect on those remarkable phænomena of the earth's visible structure, which being in course of time accurately registered and arranged, have become the basis of that noble science, the boast of our age, *geology*. . . . The Mundus Subterraneus of Athanasius Kircher, famous for the variety and originality of his erudition, contains probably the *geology* of his age, or at least his own. It was published in 1662. Ten out of twelve books relate to the surface or the interior of the earth, and to various terrene productions; the remaining two to alchemy and other arts connected with mineralogy. Kircher seems to have collected a great deal of geographical and geological knowledge. In England, the spirit of observation was so strong after the establishment of the Royal Society, that the Philosophical Transactions in this period contain a considerable number of *geognostic* papers, and the genius of theory was aroused, though not at first in his happiest mood.—*Hallam, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth Centuries*, pt. iv. ch. viii. § 31.

Géomancer. *s.* Fortuneteller; caster of figures; cheat who pretends to foretell futurity by other means than the astrologer.

Fortunetellers, jugglers, *geomancers*, and the incantatory impostors, though commonly men of inferior rank, daily delude the vulgar.—*Sir T. Browne, Vulgar Errours.*

Géomancy. *s.* [Gr. μαντεία = prophecy.] Art of foretelling what shall happen by means of divination connected with the earth.

According to some there are four kinds of divination: hydromancy, pyromancy, aeromancy, and *geomancy.*—*Ayliffe, Parergon Juris Canonici.*

He therefore sent out all his senses,
To bring him in intelligences;
Which vulgars, out of ignorance,
Mistake for falling in a trance;
But those that trade in *geomancy*,
Affirm to be the strength of fancy.
Butler, Hudibras.

Geomántic. *adj.* Pertaining to the art of casting figures.

Two *geomantick* figures were display'd
Above his head, a warrior and a maid;
One when direct, and one when retrograde.
Dryden.

Geómeter. *s.* [Gr. γεωμέτρης.] One skilled in geometry; geometrician.

The plane of many-sided squares,
That wont be drawn out by *geometers.*
Bishop Hall, Satires, v. 2.

He discerns presently, by your judgement of algebra, what a *geometer* you are like to prove.—*Wallis, Correction of Hobbes*, § 1.

He became one of the chief *geometers* of his age.—*Watts.*

What *geometer* ever died to vindicate the certainty of geometry?—*Milman, History of Latin Christianity*, b. xiv. ch. iii.

Geometers have, in all ages, been open to the imputation of endeavouring to prove the most general facts of the outward world by sophistical reasoning, in order to avoid appeals to the senses.—*J. S. Mill, System of Logic*, b. iii. ch. v. § 5.

Geométric. *adj.* Relating to, consisting in, or arranged according to, geometry.

Geometrick jasper seemeth to affinity with the lapis sanguinalis described by Boetius; but it is certainly one sort of lapis cruciformis.—*Grew, Museum.*

Does not this wise philosopher assert,
That the vast orb, which casts so far his beams,
Is such, or not much bigger than he seems?
That the dimensions of his glorious face
Two *geometrick* feet does scarce surpass?
Sir R. Blackmore.

Geométrical. *adj.*

1. Pertaining to geometry.

A *geometrical* scheme is let in by the eyes, but the demonstration is discerned by reason.—*Dr. H. More, Antidote against Atheism.*

This mathematical discipline, by the help of *geometrical* principles, doth teach to contrive several powers.—*Wilkins.*

2. Prescribed or laid down by geometry.

Must men take the measure of God just by the same *geometrical* proportions that he did, that gather'd the height and bigness of Hercules by his foot?—*Bishop Stillingfleet.*

Geométrically. *adv.* In a geometrical manner; according to the laws of geometry.

'Tis possible *geometrically* to contrive such an artificial motion as shall be of greater swiftness than the revolutions of the heavens.—*Bishop Wilkins, Mathematical Magic.*

All the bones, muscles, and vessels of the body are contrived most *geometrically*, according to the strictest rules of mechanicks.—*Ray, On the Wisdom of God as manifested in the Works of the Creation.*

Geometrician. *s.* One skilled in geometry; geometer.

Although there be a certain truth, *geometricians* would not receive satisfaction without demonstration thereof.—*Sir T. Browne.*

How easily does an expert *geometrician*, with one glance of his eye, take in a complicated diagram, made up of many lines and circles.—*Watts, Improvement of the Mind.*

Geómetrize. *v. n.* Act according to the laws of geometry.

We obtain good store of crystals, whose figures were differing enough, though prettily shaped, as if nature had at once affected variety in their figuration, and yet confined herself to *geometrize*.—*Boyle.*

Geómetry. *s.* [Gr. γεωμετρία; Fr. *géométrie.*] Originally signifies the art of measuring the earth, or any distances or dimensions on or within it: but it is now used for the science of quantity, extension, or magnitude abstractedly considered, without any regard to matter.

Geometry very probably had its first rise in Egypt, where the Nile annually overflowing the country, and covering it with mud, obliged men to distinguish their lands one from another, by the consideration of their figure; and after which, 'tis probable, to be able also to measure the quantity of it, and to know how to plot it, and lay it out again in its just dimensions, figure and proportion: after which, it is likely, a farther contemplation of those draughts and figures helped them to discover many excellent and wonderful properties belonging to them; which speculations were continually improving, and are still to this day. *Geometry* is usually divided into speculative and practical; the former of which contemplates and treats of the properties of continued quantity abstractedly; and the latter applies these speculations and theorems to use and practice, and to the benefit and advantage of mankind.—*Harris.*

In the muscles alone there seems to be more *geometry* than in all the artificial engines in the world.—*Ray, Wisdom of God manifested in the Works of the Creation.*

Him also for my censor I disdain,
Who thinks all science, as all virtue, vain;
Who counts *geometry* and numbers toys,
And with his foot the sacred dust destroys.
Dryden, Translation of Persius.

Terms belonging to a system are defined, not by the meaning of their radical words, but by their place in the system. That they should be appropriate in their signification, aids the processes of introducing and remembering them, and should therefore be carefully attended to by those who invent and establish them; but this once done, no objections founded upon their etymological import are of any material weight. We find no inconvenience in the circumstance that *geometry* means the measuring of the earth, that the name *porphyry* is applied to many rocks which have no fiery spots, as the word implies, and *oolite* to strata which have no roelike structure.—*Whewell, Novum Organon renovatum*, p. 301: ed. 1858.

Geopónical. *adj.* Relating to agriculture; relating to the cultivation of the ground.

Such expressions are frequent in authors *geoponical*, or such as have treated de re rustica.—*Sir T. Browne, Vulgar Errours.*

Geopónics. *s. pl.* [Gr. πόνος = labour.] Science of cultivating the ground; doctrine of agriculture.

The study of *geoponicks* has always been of esteem in the world; and the writings of Virgil, Constantine, Theophrastus, Varro, Columella, and Palladius, as classical learning as any we have amongst us.—*Plot, Letter to Charlett*, vol. i. p. 73.

Herbs and wholesome sallets, and other plain and useful parts of *geoponicks*.—*Evelyn.*

George. *s.* Figure of St. George on horseback worn by the knights of the Garter.

Look on my *george*, I am a gentleman;
Rate me at what thou wilt.
Shakespear, Henry VI. Part II. iv. 1.

George. *s.* Johnson's explanation of this word, as it appears in the extract, is 'A brown loaf; of this sense I know not the original.' Nor has Todd explained it.

The present editor believes that it was a word of which the exact meaning was as little known to Dryden who used it as to the lexicographers who quoted it from him. This is because, at the present time, though not often used at all, it is rarely used by any two persons in the same sense. Nevertheless, it *is* used occasionally; and a word which is used now without any accurate perception of its meaning may have been used with equal laxity by so important a writer as Dryden.

Word for word, *george* is *gorge*, a term which is itself explained by the following extract from the Catalogue of Specimens in the Ceramic series of the Museum of Practical Geology in Jermyn Street.

'According to Faulkner (History of Fulham), a pottery was established at Fulham, in 1684, by Mr. John Dwight, of Oxfordshire (who had been Secretary to three successive bishops of Chester), for pitchers, named 'white *gorges*,' and several kinds of stone wares, among others, imitations of Cologne ware. The museum does not contain any specimen from this pottery in its collections.'

In this extract, however, as well as in the original notice, the word is treated as either a local or technical term.

In Cambridge the word becomes *gotch.* and applies, in its strictest propriety, to a large earthenware narrow-necked jug or pitcher, holding more than a gallon, and glazed inside. Some are yellow. Generally, however, they are of a reddish-brown or tile colour. These are the *brown gotches*, *gorges*, or *georges*; none of the names being common. *Georges*, however, within the last thirty years might be found in certain large dormitories as an adjunct to the dressing-table; and perhaps they still exist. Where there was one to a chamber, it was 'the' *george*, erroneously connected, even by those who knew its use, with the proper name. Sometimes they were *brown georges.*

Such is the sense in which the word *ought* to be used. Used improperly, however, it seems to be applicable, according to the fancy of the speaker, to anything which is at one and the same time brown and coarse. *Brown loaf* was Johnson's interpretation. It has been heard, by the present editor, as a name for human fæces; and others may have heard it with equally different significations. As a general rule, however, the true signification is very rarely attached to it.

Cubb'd in a cabin, on a mattress laid,
On a brown *george*, with lousy swobbers, fed.
Dryden, Translation of Persius.

George-noble. *s.* Gold coin, current at six shillings and eightpence, in the reign of king Henry VIII.

The gold coins of Henry the Eighth, were sovereigns, half sovereigns, rials, half and quarter-rials, angels, angelets, and quarter angels, *george-nobles*, forty-penny pieces, crowns of the double rose, and half-crowns.—*Leake, On English Coins.*

Geórgic. *s.* [from Latin *Georgica* (itself from the Greek γῆ = earth + ἔργον = work), the title of a work on husbandry by Virgil, and, as such, a proper, rather than a common, name.] Book, or part of a book, on husbandry: the work of Virgil consisting of four books, i.e. the first, second, third, and fourth *Georgic*. Otherwise the word is generally, though not in the first extract, plural. The pronunciation, unlike that of the other compounds of γῆ (direct from the Greek), is dissyllabic, i.e. as if the origin of the word were the proper name George.

Much less ought the low phrases and terms of art, that are adapted to husbandry, have any place in such a work as the *Georgick*, which is not to appear in the natural simplicity and nakedness of its subject, but in the pleasantest dress that poetry can bestow upon it.—*Addison, On Virgil's Georgicks.*

The Pleasures of Imagination, the essay on the *Georgicks*, and his [Addison's] last papers in the Spectator and Guardian, are models of language.—*J. Warton, Essay on the Writings and Genius of Pope.*

Geórgic. *adj.* Relating to agriculture; having the character of, or consisting in, a Georgic.

Here I peruse the Mantuan's *georgick* strains,
And learn the labours of Italian swains.
Gay, Rural Sports.

Geránium. *s.* [Gr. γέρανος = crane.] Cranesbill; native plant so called from the form of their seed-vessel, which is prolonged into a beak like that of a crane. The Latin name, however, is nearly as common as the English, even when applied to the wild species. In *Horticulture*, the geraniums are no true members of the genus *Geranium*, as at present limited, but of the genus Pelargonium.

The third month Lady Armine determined to make a garden. 'I wish,' said her affectionate husband, as he toiled with delight in her service: 'I wish, my dear Constance, that Glastonbury was here; he was such a capital gardener.'—'Let us ask him, dear Ratcliffe' . . .—'Why, we are so happy,' said Sir Ratcliffe, smiling; 'and yet Glastonbury is the best creature in the world. I hope you will like him, dear Constance.'—'I am sure I shall, dear Ratcliffe. Give me that *geranium*, love. Write to him to-day; write to Glastonbury to-day.'—*Disraeli, Henrietta Temple*, ch. ii.

Gérfalcon. *s.* [German, *geierfalk.* Often spelt *gyrfalcon*, as if from the Latin *gyrus* = circle, circular flight.] Large and fierce species of falcon (Falco islandicus) so called.

You must not hope to find your *gier-falcon* there, which is the noble hawk.—*Sir T. Browne, Of Hawks, Miscellanies*, p. 118.

They say that these two falcons differ in the comparative length of their wings in reference to the tail; the Iceland falcon is to them a much more valuable as well as much more rare species; that they require a different system of training, as well as of general management. They describe the Iceland falcon as a bird of higher courage than the *gyr-falcon*; of a more rapid and bolder flight; and that it can be thrown successfully at larger game. Its gyrations are said to be wider, its mount higher, and its stoop to the quarry more impetuous, grand, and imposing.—*J. Hancock*, in *Annals of Natural History*, ii. 241.

The *gyr-falcon* 'may be considered one of the most typical in form, as it is largest in size. . . . It is not very numerous anywhere; and, from its great courage and strength, large sums were formerly expended in procuring specimens from Iceland and Norway. . . . Those specimens obtained from Iceland were called exclusively Iceland falcons, and from peculiarities observed in their disposition, as well as in their mode of flying at their game, not only commanded the highest prices, but they were and are even now considered by falconers as a species distinct from the *gyr-falcon*.—*Yarrell, British Birds.*

If he wished to amuse himself with field sports, he had at his command an establishment far more sumptuous than that which had belonged to him when he was at the head of a kingdom, an army of huntsmen and fowlers, a vast arsenal of guns, spears, bugle-horns, and tents, miles of network, staghounds, foxhounds, harriers, packs for the boar and packs for the wolf, *gerfalcons* for the heron and *haggards* for the wild duck.—*Macaulay, History of England*, ch. xx.

Germ. *s.* [Lat. *germen, -inis.*]

1. Sprout or shoot; principle of growth.

Whether it be not made out of the *germ* or treadle of the egg, doth seem of lesser doubt.—*Sir T. Browne, Vulgar Errours.*

2. Applied to *immaterial* objects.

Mr. Hunter's work on the blood, . . . abounding in principles, or the *germs* of principles, . . . afforded a departure for all future study and observation.—*Dr. P. M. Latham, Lectures on Subjects connected with Clinical Medicine*, lect. iv.

3. In *Botany.* Parts, in general, containing the embryo, or parts which are to be developed into the future plant: (as opposed to the pistil, style, and stigma, by which the fertilizing element is conveyed, and to the anthers and stamens, connected with the fertilizing principle itself).

Used *adjectivally*, or as the *first element* in a *compound*; the result being a technical, rather than a current, term; its meaning, however, being a cell from which growth originates, as opposed to one in which the fertilizing principle exists.

The second of these sub-divisions deals with the phenomena of genesis in the abstract. It takes for its subject-matter, such general questions as—What is the end subserved by the union of sperm-cell and *germ*-cell? Why cannot all multiplication be carried on after the asexual method? What are the laws of hereditary transmission? What are the causes of variation?—*Herbert Spencer, The Data of Biology*, § 41.

Gérman. *s.* [Fr. *germain*; Lat. *germanus.*] Brother; one approaching to a brother in

proximity of blood: (thus the children of brothers or sisters are called cousins *german*).

They knew it was their cousin *german*, the fa n is Amphialus.—*Sir P. Sidney.*

And to him said, Go now, proud miscreant,
Thyself thy message do to *german* dear.
Spenser, Faerie Queen.

Wert thou a bear, thou wouldst be killed by the horse; wert thou a horse, thou wouldst be seiz'd by the leopard; wert thou a leopard, thou wert *german* to the lion, and the spots of thy kindred were juries on thy life.—*Shakespear, Timon of Athens*, iv. 3.

You'll have your nephews neigh to you; you'll have coursers for cousins, and genets for *germans*.—*Id., Othello*, i. 1.

Gérman. *adj.* *Obsolete.*

1. Related.

Not he alone shall suffer what wit can make heavy, and vengeance bitter; but those that are *german* to him, though removed fifty times, shall come under the hangman.—*Shakespear, Winter's Tale*, iv. 3.

2. Genuine.

From the profession of this doctrine, it is most undeniably manifest, that Arius was a *german*, or genuine disciple of Plato's.—*Cudworth, Intellectual System*, p. 575. (Ord MS.)

The word being rarely used, its accent is doubtful. It is probable, however, that when it is used in a sense suggested by *cousin-german*, the pronunciation is as marked in the entry. When, however, the archaic phrase '*more german* (i. e. *akin*) to the matter' is used, we accentuate the last syllable, and perhaps would write it *germáne*, or *germain*.

Germánder. *s.* Native plant so called, Veronica Chamædrys; speedwell. See Forget-me-not.

Little heaps, in the nature of mole-hills, should be set, some with wild thyme, some with pinks, some with *germander*, that gives a good flower to the eye. —*Bacon, Essays, Of Gardens.*

Gérmanism. *s.* Idiom of the German language.

It is full of Latinisms, Gallicisms, *Germanisms*, and all isms but Anglicisms.—*Lord Chesterfield.*

Germánity. *s.* Brotherhood; kindred; alliance. *Rare.*

Gíbbering. *part. adj.* Sounding inarticulately.

The stones are the same stones: but the rest, Men, Rebellion, Pathos, Peroration, see! it has all fled, like a *gibbering* troop of ghosts, like the phantasms of a dying brain.—*Carlyle, History of the French Revolution*, pt. ii. b. vi. ch. iii.

Gíbberish. *s.* [see last three extracts.] Cant; private language of rogues and gipsies; words without meaning.

What! methynke ye be clerkyshe,
For ye speake good *gibbryshe*.
Interlude of Youth: 1557.

Some, if they happen to hear an old word, albeit very natural and significant, cry out straitway, that we speak no English, but *gibberish*.—*Epistle prefixed to Spenser's Shepherd's Calendar*.

Some of both sexes writing down a number of letters, just as it came into their heads; upon reading this *gibberish*, that which the men had wrote sounded like High Dutch, and the other by the women like Italian.—*Swift*.

These verses, which were in no respect above the ordinary standard of street poetry, had for burden some *gibberish* [the burden of the song Lillibullero] which was said to have been used as a watchword by the insurgents of Ulster in 1641.—*Macaulay, History of England*, ch. ix.

[Derived by Skinner from *gaber*, French, to cheat; by others conjectured to be formed by corruption from *jabber*. But, as it was anciently written *gebrish*, it is probably derived from the chymical cant, and originally implied the jargon of *Geber* and his tribe.—*Johnson*.]

[The manner of writing this word *geberish* or *gebrish*, is found in Camden: 'it would seem most strange and harsh Dutch, or *geberish*, as women call it!' This observation of Camden will hardly favour the chymical etymon. There is another variation, that of *giberidge*, or *gibbridge*, which is in the old dictionary of Sherwood, and in the Satires of Marston, 1599. This also is unfriendly to *Geber* and his tribe; and the oldest method of writing the word, which is *gibberish*, and not *geberish*, will hardly be thought to be on their side. See the first of the examples. It means originally, perhaps, the *gabble* of the schoolmen; '*scholastick gibberish*,' as Goodman writes (Winter Evening Conference, pt. iii.). Moreover, see Lye, edit. Manning. Gabban, to deride, to mock, whence perhaps our *gabble* and *gibberish*. Thus Dr. Jamieson considers our word to be from *gabber* or *jabber*, whence *gibber*, and so *gibberish*, if not rather from the Teutonic *gaberdacie*, trifles. But see To Gab and To Gabber. Serenius also thinks our *gibberish* to be synonymous with *gibe*, a mock or joke. Bullokar presents us with another substantive formed from it, viz. *gibberishness*, which he calls 'any kind of mad, broken, fustian language, *gibble-gabble*, canting, &c.' (edit. 1656).—*Todd*.]

[*Gibber*, like *gabber*, *jabber*, and *gabble*, represents the sound of rapid talking without reference to meaning, whence *gibberish*, gibbering, an utterance of articulate sounds without sense. Old Norse, *gifra*, to jabber.—*Wedgwood, Dictionary of English Etymology*.]

Gíbberish. *adj.* Canting; unintelligible; fustian.

Gíbberish. *v. n.* Prate idly or unintelligibly.

You understand not the state of 'limbus patrum,' nor the depth of the question, but scum [skim] upon the surface, and *gibberish* you cannot tell for what.—*Bishop Mountagu, Appeal to Cæsar*, p. 248: 1625.

Gíbbet. *s.* [Fr. *gibet*; see also last extract.]

1. Gallows; post on which malefactors are hanged, or on which their carcasses are exposed.

Unto the *gibbet*, but he did adore
That blessed pow'r which he had set at nought?

Able to bring the *gibbet* in disgrace. *Cleaveland*.

Haman suffered death himself upon the very *gibbet* that he had provided for another.—*Sir R. L'Estrange*.

Papers lay such principles to the Tories, as, if they were true, our next business should be to erect *gibbets* in every parish, and hang them out of the way.—*Swift*.

2. Any transverse beam.

[The *gibbet* seems originally to have been not a mere projecting arm of gallows to which a man must be raised in order to hang him, but a contrivance like the wipe of a well, by which the sufferer could at once be swung up into the air. We find it spoken of as actually raising the sufferer from the ground.

'Vultibus erectis *sursum tollente gibeto*
Digna Jovi fiunt oblatio, jure levati
A tellure procul.' (Willelmus Brito in Ducange.)

And Matthew Paris designates it as '*machinam illam pœnalem* quæ *gibet* appellatur,' language implying some mechanical contrivance beyond what would be applicable to a simple support. The root (somewhat disguised by an initial *w*, which is so commonly found interchanging with a *g*) is seen in Dutch *wip*, indicating any sudden reciprocating movement, as a wink of the eye; *wippen*, to toss, jerk up into the air (P. Marin); *wippe*, toileno, a *wipe*, or lever for lifting water out of a well, patibulum tollenonis instar constructum, a gallows made like a wipe, i. e. a gibbet. (Kilian.) Swedish *wippa*, to whip or trice up; *wippkarra*, a tumbril; *wippgalge*, a gibbet.—*Wedgwood, Dictionary of English Etymology*.]

Gíbble-gábble. *s.* Any rude or noisy conversation; fustian language; barbarous speech.

Mad, broken, fustian language; *gibble-gabble*; canting: or such private-made words as beggars, gipsies, and such confederate rogues use one amongst another.—*Bullokar*.

Gíbbon. *s.* [?] Large anthropoid ape of the genus Hylobates.

On a retrospect of the skeletons of the latisternal tailless catarrhines, it may be observed that no orang, chimpanzee, or *gibbon* has mastoid processes; they are present in the gorilla, but smaller than in man. In the chimpanzee, as in the orangs, *gibbons*, and inferior simiæ, the lower surface of the long tympanic or auditory process is more or less flat and smooth, developing in the chimpanzee only a slight tubercle, anterior to the stylo-hyal pit. . . . The ridge which extends from the ectopterygoid along the inner border of the foramen ovale terminates in the gorilla by an angle or process answering to that called 'styliform' or 'spinous' in man, but of which there is no trace in the chimpanzee, orang, or *gibbon*. The orbits have a full oval form in the orang; they are almost circular in the chimpanzee and siamang, more nearly circular, and with a more prominent rim, in the smaller *gibbons*; in the gorilla alone do they present the form which used to be deemed peculiar to man. . . . Considering the less relative prominence of the fore part of the jaws in the siamang, as compared with the chimpanzee, the occipital character of that *gibbon*, and of other species of hylobates, marks well their inferior position in the quadrumanous scale. . . . In most *gibbons* the whole palm can be applied to the ground without the trunk being bent forward beyond its naturally inclined position on the legs. These gradational differences coincide with other characters determining the relative proximity of the apes compared with man. In the gorilla, the humerus, though less long compared with the ulna

than in man, is longer than in the chimpanzee; in the orang it is shorter than the ulna; in the siamang and other *gibbons* it is much shorter. The peculiar length of arm in those 'long-armed apes' is chiefly due to the excessive length of the antebrachial bones.—*Owen, Anatomy of Vertebrates.*

Gibbósity. *s.* Convexity; prominence; protuberance.

This way of description rendereth the face of the earth upon a plane in its own proper figure spherically, as upon the globe itself; the *gibbosity* only allowed for.—*Gregory, Posthuma*, p. 305: 1650.

2. Crookbacked.

Gíbbousness. *s.* Attribute suggested by Gibbous; convexity; prominence.

To make this convexity of the earth discernible to the eye, suppose a man to be lifted up a great height in the air, that he may have a spacious horizon under one view: but then, again, because of the distance, the convexity and *gibbousness* would vanish away; he would only see below him a great circular flat.—*Bentley, Sermons*, viii.

Gibe. *v. n.* [see Jabber.] Sneer.

They seem to imagine that we have erected of late a frame of some new religion, the furniture whereof we should not have borrowed from our enemies, lest they should afterwards laugh and *gibe* at our party.—*Hooker, Ecclesiastical Polity.*

'Tis holyday; and shall be round the year:
Shall I my household gods and genius cheat,
To make him rich who grudges me my meat?

When I am laid, may feed on *giblet* pie?
Dryden, Translation of Persius.

Gifted. *adj.* [This is a word in which the first syllable is a substantive, the second the sign of a participle.

Considered, however, as a part of speech, the participle is for the most part connected with the verb, or, if not, with the adjective; the adjective and the verb being more closely connected than the verb and the substantive. Moreover, of what may be called substantival participles, *gifted* is a typical example. It is in no wise adjectival; such an adjective as *gift* being nonexistent. Even where it takes the guise of an adjective it is either a separate substantive or the first element of a compound, as in *gifthorse*, or *gifthórse*, no matter how sounded, i.e. whether as one or two words, as a compound, or as a combination. It wears the appearance of a participle, inasmuch as participles end in *-t*. Yet the participle of *give* is *gi-ven*. It is, doubtless, then, a true substantive.

Now rises the question, 'Can *participles* be formed from *substantives*?' Many authorities (so far as authorities are worth anything, except to the extent that they fulfil their own accomplishment) are in the affirmative. Yet (and this is the reason and excuse for the length of the present notice) there is an undeniably influential authority the other way. Coleridge's strictures on the word *talented* are well known; and they have been adopted at second hand even when not known in their origin. The editor rejects them. What he writes now might, perhaps, have been better entered under Talented. But as *G* is at hand, and as *T* is a long way off, it is better to refer to the earlier from the later than to the later from the earlier entry.

Coleridge objected to, and disliked, the word *talented*, but without giving his reasons in full. He argued that we do not say a *shillinged* man. It is probable, however, that the objection against substantival participles, or participles without a corresponding verb, has taken its fullest form under his successors and admirers

That no one says *shillinged* is true enough; but that many a one (possibly Coleridge himself) may have said *gifted*, is not put forward as an argument on the opposite side. Neither is anything said about *monied*, as in a '*monied man*.' Again, there is a cross analogy in comparing *talented* with *shillinged*; the former word not meaning wealthy in the shape of £ *s. d.* at all, but wealthy in a secondary sense, i.e. intellectually. From this point of view the better comparison would have been to have said that there were no such words as *memoried*, *imaginationed*, and the like; the basis being chosen from words which have the same relation to intellectual *gifts* in general, as *shillings* or *pounds*

have to the highest pecuniary denomination. In all this there are the elements of error.

Taking, then, the question from the opposite point of view, and arguing from *monied* and *gifted* — the latter used by Dryden and others—let us try to reconcile the authorities.

In doing this it is of primary importance to recognize the fact that the rule has nothing to do with any word as a *part of speech*, be it substantive or verb; for in cases like the one under notice there is no difference between them. Every name of an object may also be the name of the act by which it is supplied or provided; as is shown by such expressions as 'to *horse* a coach,' and as may be seen in the foregoing entry. That such formations are comparatively rare is true. The reason, however, is *not* in the nature of the word *as a part of speech*.

What *does* determine the formation is the *generality of the term which forms the basis of the derivative*. There are no current words for men of *pence*, *shillings*, *pounds*, or *five-pound notes*, because all such men are merged under the general name for the highest denomination of their class in the way of capital. Neither are there current words for men of *memories* or *imaginations*, because all such men are merged under the highest denomination of their class in the way of intellect. Hence, *monied*, *gifted*, and *talented* come out as the current words. *Shillinged* might certainly, by possibility, exist, and so might *five-pound-noted*, and so might *imaginationed*, as well as many others. They would exist if it were necessary to distinguish between men of *pence* (or *pounds*) and men of *one-pound notes*; or between men of *memory* and men of *reasoning powers*; but this distinction has not yet affected our etymology, i.e. our etymology has dealt with generalizations rather than distinctions. So far as it affects the latter it accomplishes its object by the prefix of a word meaning *much*. A *many-pounded* man would mean much the same as a *monied* man; but the approximate equivalence is brought about by the prefix *many*. The same applies elsewhere. *Broad-acred* and *many-acred* mean *landed*. Meanwhile, *landed* itself, as in '*landed* interest,' is in the same category with the words already noticed. Yet it is scarcely possible to believe that the great writer who condemned the word *talented* never used the word *landed*.]

Gipsy. *s.*

1. Member of the family, tribe, or community of the gipsies. Their language is of Indian origin; the name being a corruption of *Egyptian*, an origin from *Egypt* having been erroneously attributed to them.

I perceive him to be more ignorant in his art of divining than any *gipsy*.—*Milton, Apology for Smectymnuus.*

Gipsy [is] corrupted from 'Egyptian;' for when the *gipsies* first appeared in Europe, they declared, and perhaps truly, that they were driven from Egypt by the Turks. They are now mingled with all nations.—*Johnson.*

The received opinion sets them down for Egyptians, and makes them out to be the descendants of those vagabond votaries of Isis, who appeared to have exercised in ancient Rome pretty much the same profession as that followed by the present *gipsies*, viz. fortune-telling, strolling up and down, and pilfering.—*Swinburne, Travels through Spain*, let. 29.

The *gipsies*, as it should seem by some striking proofs derived from their language, came originally from Hindostan, where they are supposed to have been of the lowest class of Indians, namely Parias, or, as they are called in Hindostan, Suders. They are thought to have migrated about A.D. 1408, or 1409, when Timur Beg ravaged India for the purpose of spreading the Mahometan religion. . . . They must certainly have been in Egypt before they reached us, otherwise it is incomprehensible how the report arose that they were Egyptians.—*Brand, Observations on popular Antiquities.*

[About the etymology of this word there is much question: Meric Casaubon, as is his custom, derives it from κόρη of the same signification; Minsheu from *garrula*, Latin, a prattler, or *girella*, Italian, a weathercock; Junius thinks that it comes from *herlodes*, Welsh, from which, says he, *harlot* is very easily deduced. Skinner imagines that the Saxons, who used *ceorl* for a man, might likewise have *ceorla* for a woman, though no such word is now found. Dr. Hickes derives it most probably from the Icelandick *karlinna*, a woman.—*Johnson.*]

[*Girl* was formerly an appellation common to both sexes. Serenius says, that from the Suio-Gothick *karl*, a man, many etymologists deduce our word *girl*. 'The yonge *girles* of the diocese,' in the Prologue to Chaucer's Canterbury Tales, may be the young men or the young women, the appellation, as already noticed, being common to both.... In old English, the word *girl* is exactly expressive of the Hebrew נַעַר, and means a young person of either sex.'—*Todd.*]

Gith. *s.* The older notices of this word make it mean the Guinea pepper, or capsicum. The extract connects it with the Nigella, with its black seeds and capsular fruit. At present, it is merely the English for *Githago*, the *specific* term for the Agrostemma *Githago*, or corncockle, and, as such, is found in the modern synonymies, though misapplied.

We in English call it *gith* and Nigella Romana after the Latines; Mr. Parkinson called it fennel-flowre; others, bishopswort; and others, Divæ Katherinæ flos, or St. Catharine's flower; and some
Kisse me twice
Before I rise,
and the old man's beard.—*Cole, Adam in Eden*, xcii.

Give. *v. a.* preterite *gave*; past part. *given*. [A.S. *gifan.*] This is preeminently an active or transitive verb, and it will simplify the exposition of its various shades of meaning if we begin with considering it as such, i.e. with a special view to its regimen or government. Its fundamental meaning seems to be, *make over* or *transfer*. Now this implies not only an *object transferred*, but a person or thing *to whom it is transferred*. Hence when the construction is in full, the nouns that follow it are *two* in number; one conveying the name of the thing given and received, the other the name of the receiver.

Give us also sacrifices and burnt offerings, that we may sacrifice unto the Lord.—*Exodus*, x. 25.

Give us of your oil, for our lamps are gone out.—*Matthew*, xxv.

This opinion abated the fear of death in them which were so resolved, and *gave* them courage to all adventures.—*Hooker, Ecclesiastical Polity.*

I had a master that *gave* me all I could ask, but thought fit to take one thing from me again.—*Sir W. Temple.*

If both or either of these be omitted the signification is slightly altered.

They were eating and drinking, marrying and *giving* in marriage.—*Matthew*, xxiv. 38.

Here the omission consists in the names of both what was given and who received; accordingly the construction is, in appearance, intransitive or neuter.

The woman whom thou *gavest* to be with me, she gave me of the tree, and I did eat.—*Genesis*, iii. 12.

Here the omission is the name of the recipient, which is easily supplied from the context. In the following it is not so clear. There was either a place or person to receive the bills when parted with by some one else; the exact nature, however, of the recipiency is uncertain, and a combination *give in* has the character of an idiom.

Those bills were printed not only every week, but also a general account of the whole year was *given* in upon the Thursday before Christmas.—*Graunt, Observations on the Bills of Mortality.*

When the names of the giver and receiver are identical, the construction is reflective, and *give* becomes nearly synonymous with *apply* or *addict.*

The Helots, of the other side, shutting their gates, *gave themselves* to bury their dead, to cure their wounds, and rest their wearied bodies.—*Sir P. Sidney.*

After men began to grow to number, the first thing we read they *gave themselves* into, was the tilling of the earth and the feeding of cattle.—*Hooker, Ecclesiastical Polity.*

They who *gave themselves* to warlike action and enterprises, went immediately to the temple of Odin.—*Sir W. Temple.*

Besides the character of the construction, that of the act, as taken by itself, requires notice. An object may be made over from A to B in two ways: (*a*) *with* or (*b*) *without* pay, reward, or equivalent, i. e. the transfer may constitute a sale or a free gift. In the following extract the first line, *taken alone*, suggests the notion of a gift; the third, that of a bargain; the second, a mixture of the two. In most of the others the object is immaterial, the construction being sometimes either wholly or approximately that of an idiom; e.g. give *place*, *way* = *yield*, where the actual *place* or *way* is non-existent, whereas when it exists the combination has its ordinary import.

If you did know to whom I *gave* the ring,
If you did know for whom I *gave* the ring,
And would conceive for what I *gave* the ring,
And how unwillingly I left the ring,
You would abate the strength of your displeasure.

Gláciable. *adj.* Capable of being converted into ice.

Browne, Vulgar Errours*, b. ii. ch. i. (Rich.)

Glácial. *adj.* [Lat. *glacies* = ice.] Icy.
And for this *glacial* air, where is the shepherd so simple but could have told him that snowy, or whatever else he means by *glacial* air, or clouds, may serve to darken the day, but not at all to prolong it.—*Grew, Cosmologia Sacra*, b. iv. ch. iv. (Ord MS.)

Glacial period or *epoch.* In *Geology.* A division of the later tertiary chronology, so called from the signs of the action of large masses of ice, either as glaciers leaving grooves or striæ on rocks, or as icebergs containing boulders, which they carried to great distances, and left, as they melted, in latitudes far south of the icy districts of the present geology.

Used with *præ* = before, and *post* = after, as the *second element* of a *compound.*
The second species, the Rhinoceros megarhinus, ... has been determined by the author among remains from the brick-earths occupying the lower part of the Thames valley, and from the *preglacial* forest-bed of Cromer. ... The association in Wookey Hole Hyæna den with Elephas primigenius and Rhinoceros tichorhinus, and other characteristic *post-glacial* mammals, proves that it coexisted with the tichorhine species.—*W. B. Dawkins, Proceedings of the Royal Society*, April 26, 1866.

Gláciating. *part. adj.* Converting into ice; freezing.

The *glacier's* cold and restless mass
Moves onward, day by day;
But I am he who bids it pass,
Or with its ice delay. *Byron, Manfred.*
A *glacier* may be instanced as showing nearly as much combination in its changes as a plant of the lowest organization. It is in constant growth and constant decay; and the rates of its composition and decomposition preserve a tolerably equable ratio. It moves; and its motion is in immediate dependence on its thawing. It emits a torrent of water, which, in common with its motion, undergoes annual variations as plants do: and both also undergo, in summer at least, daily variations. During part of the year, the surface melts and freezes alternately; and on these changes are dependent the variations in progressive movement, and in efflux of water. Thus we have growth, decay, changes of temperature, changes of consistence, changes of velocity, changes of excretion, all going on in mutual dependence: and it may be almost as truly said of a *glacier* as of an animal, that by ceaseless integration and disintegration it gradually undergoes an entire change of substance without losing its individuality.—*Herbert Spencer, The Data of Biology*, § 115.

Glácious. *adj.* Icy; resembling ice.
Although exhaled and placed in cold conservatories, it will crystallize and shoot into *glacious* bodies.—*Sir T. Browne, Vulgar Errours.*

The true *gladioli* are the members of the genus Iris, the connection with the lilies being spurious.

Of these higher divisions, those which have been termed orders appear to tend to something like a fixed chemical character. Thus the haloids of Naumann, and mostly those of Mohs, are combinations of an oxide with an acid, and thus resemble salts, whence their name. The silicides contain most of Mohs's spaths; and the orders pyrites, *glance*, and blende, are common to Naumann and Mohs; being established by the latter on a difference of external character.—*Whewell, History of Scientific Ideas*, ii. 141, ed. 1858.

Of the members of the two sorts indicated by the extract, it is the conglobate which best answers to the name.

All the *glands* of a human body are reduced to two sorts, viz. conglobate and conglomerate. A conglobate *gland* is a little smooth body, wrapt up in a fine skin, by which it is separated from all the other parts, only admitting an artery and nerve to pass in, and giving way to a vein and excretory canal to come out: of this sort are the *glands* in the brain, the labial *glands* and testes. A conglomerate *gland* is composed of many little conglobate *glands*, all tied together, and wrapt up in the common tunicle or membrane.—*Quincy.*

The characteristic symptom of *glanders* in its acute form in the horse, as described by Vines, Coleman, Percival, and Youatt, are—intense inflammation of the pituitary membrane, attended by erosions which soon pass into chancre-like sores; swelling of the lips and nose; rapid extension of the ulceration, giving rise to a purulent and disagreeable discharge, which often passes to a purplish, or bloody and horribly fœtid sanies; subsequently gangrene of the nasal membrane, with increased discharge, sometimes with slight hæmorrhage; swelling and pain of the sublingual glands; inflammation of the conjunctiva and nasal eyelid, quickly passing into a livid and swollen state, with an offensive sanious discharge; great loss of flesh and strength, more or less cough, and fever of a putro-adynamic or malignant character. These symptoms at last pass into those of farcy *glanders*, in which small tumours appear about the legs, lips, face, neck, or other parts. . . . Glanders may appear in the human subject in different forms. 1st. In that of simple acute *glanders*; the disease attacking the nasal cavities and adjoining parts. 2nd. In that of acute farcy *glanders*; the malady appearing in various parts, in the form of small tumours, giving rise to foul ulcers, suppuration, &c. 3rd. These varieties may exist separately, or they may be both produced at the same time, or the one may precede the other. 4th. Each of them may also occur in a chronic form, and, in this form, also, may exist separately, or be conjoined.—*Copland, Dictionary of Practical Medicine*, in voce.

A. Philips.

Glass is a transparent solid formed by the fusion of siliceous and alkaline matters. . . . Chance undoubtedly had a principal share in the invention of this curious fabrication, but there were circumstances in the most ancient arts likely to lead to it; such as the fusing and vitrifying heats required for the formation of pottery, and for the extraction of metals from their ores. Pliny ascribes the origin of *glass* to the following accident. A merchant-ship laden with natron, being driven upon the coast at the mouth of the river Belus, in tempestuous weather, the crew were compelled to cook their victuals ashore, and having placed lumps of the natron upon the sand, as supports to the kettles, found to their surprise masses of transparent stone among the cinders. The sand of this small stream of Galilee, which runs from the Mount Carmel, was in consequence supposed to possess a peculiar virtue for making *glass*, and continued for ages to be sought after for that purpose.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Except on subjects for which there has been constructed a scientific terminology, . . . it is natural to prefer giving to a new object a name which at least expresses its resemblance to something already known. . . . In this manner the name of a species often becomes the name of a genus; as *salt*, for example, or oil; the former of which words originally denoted only the muriate of soda, the latter, as its etymology indicates, only olive oil; but which now denote large and diversified classes of substances resembling these in some of their qualities, and connote only those common qualities, instead of the whole of the distinctive properties of olive oil and sea salt. The words *glass* and soap are used by modern chemists in a similar manner, to denote genera of which the substances vulgarly so called are single species. And it often happens, as in those instances, that the term keeps its special signification in addition to its more general one, and becomes ambiguous, that is, two names instead of one.—*J. S. Mill, System of Logic*, b. iv. ch. v. § 3.

Glasswort hath an apetalous flower, wanting the empalement; for the stamina, or chives, and the embryoes grow on the extreme part of the leaves: these embryoes afterward become pods or bladders, which for the most part contain one seed. The inhabitants near the sea-coast cut the plants up toward the latter end of summer; and, having dried them in the sun, they burn them for their ashes, which are used in making of glass and soap. These herbs are by the country people called kelp. From the ashes of these plants is extracted the salt called sal kali, or alkali, by the chemists.—*Miller.*

Byron, Hebrew Melodies.

The memory must retain the sensation or perception to which the technical term or degree of the scale refers. Thus with regard to colour, as we have said already, when we find such terms as tin-white or pinchbeck-brown, the metallic colour so denoted ought to occur at once to our recollection without delay or search. ... Thus *glassy* lustre, fatty lustre, adamantine lustre, denote certain kinds of shining in minerals, which appearances we should endeavour in vain to describe by periphrasis; and which the terms, if considered as terms in common language, would by no means clearly discriminate: for who, in common language, would say that coal has a fatty lustre? But these terms, in their conventional sense, are perfectly definite; and when the eye is once familiarized with this application of them, are easily and clearly intelligible.—*Whewell, Novum Organon renovatum.*

Gloss. *s.* [from Gr. γλῶσσα = tongue. See last extract.]

1. Scholium; comment.

They never hear sentence which mentioneth the word or scripture, but forthwith their *glosses* upon it are the word preached, the scripture explained, or delivered unto us in sermons.—*Hooker, Ecclesiastical Polity.*

If then all souls, both good and bad, do teach,
With general voice, that souls can never die;
'Tis not man's flatt'ring *gloss*, but nature's speech,
Which, like God's oracles, can never lie.
Sir J. Davies, Immortality of the Soul.

Indentures, cov'nants, articles, they draw,
Large as the fields themselves, and larger far
Than civil codes with all their *glosses* are.
Pope, Satires of Donne.

The *gloss* which your sister or you have put upon it, does not strike me as correct.—*Lamb, Letter to Barton.*

A *gloss*, γλῶσσα, properly meant a word from a foreign language, or an obsolete or poetical word, or whatever requires explanation. It was afterwards used for the interpretation itself.... In the twelfth century it was extended from a single word to an entire expository sentence. The first *glosses* were interlinear; they were afterwards placed in the margin, and extended finally in some instances to a sort of running commentary on an entire book. These were called an apparatus.... About the same time [A.D. 1220] Accursius of Florence undertook his celebrated work, a collection of *glosses*, which in the century that had elapsed from the time of Irnerius, had grown to an enormous extent, and were, of course, not always consistent.... Thus was compiled his 'Corpus Juris Glossatum,' commonly called *Glossa* or *Glossa* Ordinaria.—*Hallam, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth Centuries*, §§ 69-70.

2. Interpretation artfully specious; specious representation. In some, perhaps in most cases, the exact origin is ambiguous; inasmuch as speciousness applies to *glosses* of both kinds.

Poor painters oft with silly poets join,
To fill the world with strange but vain conceit:
One brings the stuff, the other stamps the coin,
Which breeds nought else but *glosses* of deceit.
Sir P. Sidney.

It is no part of my secret meaning to draw you hereby into hatred, or to set upon the face of this cause any fairer *gloss* than the naked truth doth afford.—*Hooker, Ecclesiastical Polity.*

Gloss. *v. n.* With a disparaging sense, i.e. add as a gloss infringing on the import of the text, though, at the same time, explaining, or affecting to explain, it.

Of a beautiful countenance; or, had beautiful eyes;... as Conradus Pellicanus here *glosses.*—*Bishop Patrick, Paraphrases and Commentaries on the Old Testament*, 1 *Samuel*, xvi. 12.

3. Embellish with superficial lustre.

But thou, who lately of the common strain,
Wert one of us, if still thou dost retain
The same ill habits, the same follies too,
Gloss'd over only with a saintlike show,
Then I resume the freedom which I gave,
Still thou art bound to vice, and still a slave.
Dryden, Translation of Persius.

Glossárial. *adj.* Relating to, connected with, or consisting in, a glossary.

In the *glossarial* index of former editions, the reader has merely been presented with a long list of words, and references to the passages where they occur, often with very different meanings; and is thus called upon to roam over many volumes, in order to form a *glossary* for himself.—*Boswell, Advertisement to Edition of Shakespeare.* (Rich.)

The *glossarist* I take to be Philip de Bergamo, a prior at Padua, who wrote a most elaborate moralisation on Cato.—*T. Warton, History of English Poetry*, ii. 169.

2. One who writes a dictionary of obscure or antiquated words.

Mr. J. Kersey... with laudable industry has collected almost all the old words, I believe, which are to be found either in Speght or Skinner, and has generally with much fidelity copied the interpretations assigned to them by those two *glossarists.*—*Tyrwhitt, Vindication of the Rowley Controversy*, p. 162.

According to Varro, when 'delubrum' was applied to a place, it signified such a one, 'in quo dei simulachrum dedicatum est,' and also in the old *glossaries.*—*Bishop Stillingfleet.*

The reason why the assertion of a single judge does not prove the existence of judicial acts, is because his office is to pronounce judgement, and not to become an evidence; but why may not the same be said of two judges? All this is related by Aldred, the Saxon *glossator*, at the end of St. John's Gospel.—*T. Warton, History of English Poetry*, vol. i. diss. i.

Glósser. *s.* Scholiast; commentator.

Neither the *glossers* upon the Alcoran, nor the most authentic legend of his life, take any notice thereof.—*L. Addison, Life of Mahomet*, p. 62: 1679.

'Interpretation,' says Savigny, 'was considered the first and most important object of *glossers*, as it was of oral instructors.... It may be reckoned a characteristic merit of many *glossers* that they keep the attention fixed on the immediate subject of explanation.... Nor did the *glossers*, by any means, slight the importance of laying a sound critical basis for interpretation; but, on the contrary, laboured earnestly in the recension and correction of the text.'... Savigny defends his favourite *glossers* in the best manner he can;... but, without much acquaintance with the ancient *glossers*, one may presume to think that, in explaining the Pandects,.. their deficiencies... must require a perpetual exercise of our lenity and patience.... The *glossers* became the sole authorities, so that it grew into a maxim, No one can go wrong who follows a gloss, and some said a gloss was worth a hundred texts.—*Hallam, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth Centuries*, §§ 71, 72.

Some [words] I believe may pose the ablest *glossographer* now living.—*T. Blount, Ancient Tenures*, pref.

Glossólogy. *s.* The most useful signification which could be given to this word, would be the details of the number, connexion, relations, and condition of the languages of the earth; in which case it might supplant the barbarous term Linguistic. If this is best expressed by Glossography, limited to the purely descriptive part, whilst *glossology* applies to the forces which change language (and the division is not too late to be made) rather than their formal relations, both words might be used. If so, the two would nearly be complementary to one another as equivalents to Comparative Philology; to which, as taken alone, *glossology* is the nearer approximation.

Decandolle and others use the term *glossology* instead of 'terminology,' to avoid the blemish of a word compounded of two parts taken from different languages. The convenience of treating the termination 'ology' (and a few other parts of compounds) as not restricted to Greek combinations, is so great, that I shall venture, in these cases, to disregard this philological scruple.—*Whewell, History of Scientific Ideas*, vol. ii. p. 109, note: ed. 1858.

As conspicuous examples of this class, we may take geology, *glossology*, or comparative philology, and comparative archæology.—*Ibid.* b. x. ch. i.

2. Specious.

That Lord Chesterfield must have been mortified by the lofty contempt, and polite yet keen satire, with which Johnson exhibited him to himself in this letter, it is impossible to doubt. He, however, with that *glossy* duplicity which was his constant study, affected to be quite unconcerned.—*Boswell, Life of Johnson.*

Through Macer's gullet she runs down,
While the vile *glutton* dines alone;
And, void of modesty and thought,
She follows Bibo's endless drought.
Prior, Alma, canto ii.

Gluttons in murder, wanton to destroy,
Their fatal arts so impiously employ. *Granville.*

2. Animal so called; Gulo; see also Wolverine.

The *gluttons* had also been placed in the genus of bears by Linnæus; but they approach more to the martins by their teeth, as well as by their entire constitution and character, resembling the bears only in their plantigrade character. . . . The most celebrated species is the *glutton* of the north. . . . As large as our badger, usually with a beautiful fur of a deep maroon, with a disk somewhat browner on the back, but sometimes of paler tints. It inhabits the coldest countries of the north, is esteemed to be remarkably cruel, does not sleep during the winter, and contrives to master the largest animals by leaping downwards on them from a tree. Its voracity has been ridiculously exaggerated by some writers. . . . It is probable that the ratel . . . should be placed at the end of the *gluttons* and *grisons*. . . . The polecats approach the *grisons* and *gluttons*.—*Translation of Cuvier's Règne Animal.*

Whom *gluttony* and want at once attend.
Dryden, Translation of Juvenal.

The inhabitants of cold moist countries are generally more fat than those of warm and dry; but the most common cause is too great a quantity of food, and too small a quantity of motion; in plain English, *gluttony* and laziness.—*Arbuthnot, On the Nature and Choice of Aliments.*

Glýcerine. *s.* [Gr. γλυκύς = sweet.] In *Chemistry.* See extract.

Little was known of the true nature of fats previous to the admirable researches of Chevreul, who showed them to be compounds of peculiar acids with a base termed *glycerine*, and that common soaps are the same acids combined with either soda or potassa. The three principal acids which thus occur are the stearic, the margaric, and the oleic acids; and the stearate, the margarate, and the oleate of *glycerine* are generally termed stearine, margarine, and elaine. . . . This substance [*glycerine*], under the name of the sweet principle of oils, was discovered by Scheele, and more fully examined by Chevreul. . . . *Glycerine*, when pure, is a thick uncrystalizable syrup, . . . sweet, inodorous, soluble in all proportions in water and alcohol, but insoluble in ether.—*Brande, Manual of Chemistry*, pp. 1219–1275: 1848.

This is well demonstrated in the dermal bones of the great extinct *glyptodons*.—*Owen, Lectures on Comparative Anatomy*, lect. vi.

Glyptográphic. *adj.* [Gr. γλυπτός = carved or engraved, either in the way of sculpture or engraving.] Describing the methods of engraving figures on precious stones.

This need not necessarily be *gneiss*, in the strict mineralogical sense of the term, but some rock like it.] In *Geology.* See extract.

The word *gneiss* is of Saxon [i.e. not Anglo-Saxon, but Saxon of the present kingdom of Saxony] origin, and since the time of Werner it has been understood to apply to a crystalline compound of quartz, felspar, and mica, distinctly stratified and very widely distributed wherever granite occurs, but more especially abundant in Scotland and the Scandinavian range, and in Bohemia, Silesia, and the metalliferous mountains of Saxony.—*Ansted, Geology*, ch. xlvi.

Gnome *s.* [?] Imaginary being in the Rosicrucian mythology, of a gloomy character, and connected with the earth rather than the air or fire.

In search of mischief still on earth to roam.

The laughers gave out, that the *gnomes* and sylphs, disguised like ruffians, had shot him, as a punishment for revealing the secrets of the cabala; a crime not to be pardoned by these jealous spirits!—*J. Warton, Essay on the Writings and Genius of Pope.*

According to Paracelsus, all things are alive, eat, drink, and excrete; even minerals and fluids. According to him and his school, besides material and immaterial beings, there are elementary spirits which hold an intermediate place, sylvans, nymphs. *gnomes*, salamanders, &c., by whose agency various processes of enchantment may be achieved, and things apparently supernatural explained. Thus this spiritualist scheme dealt with a world of its own by means of fanciful inventions and mystical visions, instead of making any step in the study of nature.—*Whewell, History of Scientific Ideas*, ii. 175: ed. 1858.

Gnome. *s.* [from Gr. γνώμη = opinion.] Sententious, or apophthegmatic, saying.

Gnome [is] a saying pertaining to the manners and common practices of men, which declareth, by an apte brevity, what in this our lyfe ought to be done or not done.—*Peacham, Garden of Eloquence*, sign. V. iii: 1577.

Gnómic. *adj.* Having the character of a gnome; sententious; apophthegmatic.

Solon is, in fact, the earliest known author who can properly be classed under the title of a *gnomic* poet. The term *gnomic* appears to have been originally invented, as it was exclusively employed, to denote a school of elegiac poetry, the object of which was to inculcate moral doctrines rather than express mental emotions; to enforce maxims of worldly wisdom than more immediate bearings on objects of special interest to the author or his public. The characteristic, consequently, of the *gnomic* style was a sententious gravity, savouring often more of philosophy than poetry. It is true that by reference to this definition, portions of the works of various preceding poets—of Archilochus, for example, or Tyrtæus—might rank as *gnomic*. There is, however, this distinction between the cases; that in the poems of those authors, the purely ethic or didactic element is not only comparatively limited, but altogether subordinate to the general scope and tendency of their muse; in Tyrtæus, for instance, to martial and political enthusiasm; in Archilochus, to satire and sarcasm. The elegies of Solon, Xenophanes, Theognis, on the other hand, are, for the most part, essentially of the *gnomic* order, while all may be said to partake more or less of the same character.—*W. Mure, Critical History of the Language and Literature of ancient Greece*, b. iii. ch. vi. § 7.

Gnómical. *adj.* [from *gnome*, γνώμη.] Sententious; containing maxims or reflections.

Adding this excellent, *gnomical*, and canonlike conclusion.—*Conference at Hampton Court*, p. 44: 1603.

Gnómical. *adj.* [from *gnomon.*] Having a gnomon: (*gnomonical* or *gnomonic* the only accurate forms).

He may have given him a dial furnished with a magnetic needle, rather than an ordinary *gnomical* dial.—*Boyle, Works*, v. 427. (Rich.)

Gnomólogy. *s.* [Gr. λογός = word, principle.] Collection of maxims and reflections.

Which art of powerful reclaiming wisest men have also taught in their ethical precepts and *gnomologies.*—*Milton, Tetrachordon.*

Gnómon. *s.* [Gr. γνώμων.] Hand or pin of a dial.

The *gnomon* of every dial is supposed to represent the axis of the world, and therefore the two ends or extremities thereof must directly answer to the north and south pole.—*Harris.*

There were from great antiquity sun-dials, by the shadow of a style or *gnomon*, denoting the hours of the day.—*Sir. T. Browne.*

Gnomónic. *adj.* Connected with, relating to, or constituted by, a gnomon.

The *gnomonic* projection is also called the *horologrigraphic* projection, because it is the foundation of dialling.—*Chambers.*

Suppose that a countryman, on a clear day, brought into the garden of some famous mathematician, should there see one of those curious *gnomonick* instruments that shew at once the place of the sun in the zodiac, his declination from the equator, the day of the month, and the length of the day, &c.—*Boyle, Works*, v. 398. (Rich.)

Gnomónics. *s.* Principles of dialling.

Man may enjoy the world above him, by applying to his uses creatures that are, by vast removes, out of his reach; as the sun, by making it afford him the elevations of the pole, and the azimuths, sun-dials of all sorts enough to make up an art called *gnomonicks.*—*Boyle, Works*, vi. 776. (Rich.)

Gnómonist. *s.* Dialler.

The sun enables the *gnomonist* to make accurate dials, to know exactly how the time passes.—*Boyle, Works*, vi. 418. (Rich.)

Gnu. *s.* In *Zoology.* See extract.

Although the *gnu* or *gnoo*, here considered as the type of the genus, was hitherto classed with the antelope; it appears that zoologists felt the necessity of moving it into one more nearly allied to Bos. . . . The word *gnoo* is of Hottentot derivation: the Dutch colonists name it wilde-beest, or wild cattle, or ox. . . . The *kokoon* (Catoblepas taurina) is found in the Caffer country, but not in the same place with the *gnoo*. . . . The brindled *gnoo* (Catoblepas Gorgon) is a third species, which, however, . . . may be a mere variety of the last.—*Translation of Cuvier's Règne Animal.*

Among the more interesting species may be pointed out the water-buck and sable antelope; the oryx, which, when seen in profile, probably suggested the unicorn mentioned by the ancients; the blegsbok, hartebeest, and sass-aybe of South Africa; the large-eyed gazelle, so often referred to by eastern poets; the springbok, so called from its springing bounds, when the white fur of its back opens like a sheet; the *gnu*, which at first seems a compound of horse, buffalo, and antelope; the sasing, or Indian antelope, with its curious cheek-pores; the wood antelopes, with their short horns often concealed amongst a bush of hairs; the chickara of India, with its four horns.—*Guide to the British Museum.*

Go. *v. n.* (The preterite, at the present time, is wanting; its place being supplied by *went*, the preterite of *wend* = turn. In the earlier stages of the language it was *yode*. Past participle *gone*.) [The first point which commands notice in this anomalous verb is its abbreviated form. In German the

infinitive is *geh-en*, in which the *h* represents an earlier *g* or *k*. The language which best shows this is the Danish, wherein *gaae* is the present, *gik* the preterite, form. The close connection between *g* (or *k*) and its nasalized form *-ng* is well known; the German preterite of *geh-en* being *gieng*, or *ging*. By these preliminaries the identity of *go* and *gang* is made clear. The same, also, tell us that the word is as anomalous in other languages as in our own. In the *old* preterite the irregularity is double. (1) There is substitution of *y* for *g*, giving *yode*. (2) There is the combination of a preterite in *-d*, with a participle in *-n*; *yode* (=*goed*), *gone* (=*goen*) *gon*; the spelling with a final *e* being in both cases objectionable.]

Its chief meaning is best exhibited by contrasting it with Come. Both denote motion, or change of place. This may be considered (1) in respect to its direction, (2) in respect to its manner generally.

(1) In the way of *direction*, the motion denoted by *come* is *to*, or *towards*, the speaker, and involves what is called the *terminus in quem*. The motion denoted by *go* is *from* the speaker, and involves the notion of the *terminus a quo*. Contrast *come hither* with *go thither*.

'Stand not upon the order of your *going*,
But *go* at once.' (Shakespear, Macbeth, iii. 4.)

'Colchester oysters are put into pits; where the sea *goeth* and cometh.'—(Bacon, Natural and Experimental History.)

(2) In respect to the character of the movement denoted by *go*, we may safely say, that in the ordinary English of the present time, it has no special limitations, i.e. that, when used alone, it does not mean one kind of motion more than another. True, we say the bird *flies*, the hare *runs*, the fish *swims* (rather than *goes*) away; but this is because the character of their several modes of motion are well defined, and definitely named. We may also say that a man is *going* to France when he is *sailing*, or *going* to London when he is *riding*. In Danish, however, the latter expression would be inaccurate, since *gaae* implies the notion of being on foot, i.e. =*walk*. Traces of a limitation of this kind are to be found in English.

'You know that love
Will creep in service where it cannot *go*.'
(Shakespear, Two Gentlemen of Verona, iv. 2.)

'And must I *go* to him?—Thou must run to him; for thou hast staid so long that going will scarce serve the turn.'—(Ibid. iii. 1.)

The same also appears in such expressions as 'he can neither stand nor *go*,' of which the meaning is 'move himself,' rather than 'be conveyed, away.' In

'Rise, let us be *going* (Matthew, xxvi. 47),

the meaning may be either *walking*, or simply *moving*.

Lastly, *go*, like *come*, is thoroughly and preeminently a neuter or intransitive verb, the construction in such expressions as *go that way*, *go an errand*, being adverbial, just as truly as *go round* is one. For this see Come. For combinations like *go it*, see It indefinite and postpositive.

Though these preliminaries carry us over a large space of ground, the details that still stand over are numerous, the headings in the previous editions amounting to more than fifty. In most of these, however, the word that determines the import is not so much the verb under notice as the word with which it is combined.

Go about. Attempt, engage in, or employ one's self on, anything: *set* (i.e. *set one's self*) *about* is a nearly equivalent term. With *business* the combination often implies an ungracious command; *go about your business*, *be sent about one's business*, being phrases which are less connected with the notion of employment on anything that interests the person who receives, than that of departure from the presence of him who gives, the order.

O dear father,
It is thy business that I *go about.*
Shakespear, King Lear, iv. 4.

Go by.

a. Pass away. Johnson writes 'pass away *unnoticed*;' the notion, however, of unobservance seems to lie chiefly in the word *let.*

That laps'd in time and passion, lets *go by*
Th' important acting of your dread command?

Shakespear, Twelfth Night, iv. 1.

My favour is not bought with words like these:
Go to; you'll teach your tongue another tale.
Rowe.

The extracts and explanation are those of the previous editions. At present the combination is rare; and as, perhaps, no living person has used it, except as an archaism, the exact sense of it, especially in respect to the metaphor involved in it, is uncertain. The editor thinks that, if he used it himself, it would be rather as an equivalent to the colloquial or slang term, *shut up* (as a door, or lid) = cease, leave off, rather than with anything suggested by a word so opposite as *come*, *come*.

Go-by. *s.* Slip; act of evasion.

Dryden, Translation of the Æneid.

3. Final purpose; end to which a design tends.

Our poet has always the *goal* in his eye, which directs him in his race: some beautiful design, which he first establishes, and then contrives the means, which will naturally conduct him to his end. —*Dryden.*

Each individual seeks a several *goal*;
But heav'n's great view is one, and that the whole.
Pope, Essay on Man.

'Tis but a part we see, and not a whole. *Ibid.*

But the accounts which kindled his ardour, plunged the Macedonians into sullen dejection, which at length broke out into open murmurs. It is possible that, if they had seen any distinct and certain *goal* before them, they would not have shrunk from the dangers and difficulties of a last enterprise, however arduous. But to set out from a region which had once appeared to them as the verge of the habitable world on a new series of conquests, to which they could foresee no termination, was enough to appal the most adventurous spirits. — *Bishop Thirlwall, History of Greece*, ch. liii.

Churn-owl, fern-owl, night-jar, night-eve, night-hawk, are other names for it; the last of which is the only one recognized by Yarrell. The cry of the bird at night makes it appropriate; which none of the others are.

This is the structure in . . . the *goatsucker*, &c. — *Owen, Anatomy of Vertebrates.*

Nightjar is also used by the same authority.

Spenser, Faerie Queen.

Go, charge my *goblins* that they grind their joints
With dry convulsions; shorten up their sinews
With aged cramps. *Shakespear, Tempest*, iv. 1.

[The *goblin* was generally conceived as a supernatural being of small size but of great strength, dwelling underground in mounds or desert places, not generally ill-disposed towards man, and in some cases domesticated with him and rendering him service. Hence the frequent addition of a familiar appellation, as in Hob-*goblin*, Hob-thrush. It was known in Germany by the name of Kobold, and was supposed particularly to frequent mines, being thence called Berg-geist, Berg-männchen, or Mine-spirit, Mine-dwarf. Another German name is Matthew Kobalein, equivalent to English Hob-goblin. The *goblin* is mentioned by Ordericus Vitalis, 'Dæmon enim quem de Dianæ fano expulit adhuc in eâdem urbe degit, et in variis frequenter formis apparens neminem lædit. Hunc vulgus *gobelinum* appellat.' He is known in Brittany by the name of *gobilin*, and is there also supposed to engage in household drudgery like Milton's Lubber-fiend, to curry the horses of a night, for instance. It is among the Celts probably that the origin of the name is to be looked for. The Welsh appellation is *coblyn*, properly a knocker, from *cobio*, to knock, to peck; *coblyn y coed*, a woodpecker. An explanation of the name is given in a passage which is the more satisfactory from the fact that the writer seems to have no idea of any connection between the word *goblin* and the superstition he is describing. 'People will laugh at us Cardiganshire miners,' says a correspondent quoted in Bridges' Guide to Llandudno, 'who maintain the existence of *knockers* in mines, a kind of good-natured impalpable people, not to be seen, but heard, and who seem to us to work in the mines. The miners have a notion that these knockers or little people, as we call them' (compare German *bergmännchen*—Adelung), 'are of their own tribe and profession, and are a harmless people, who mean well.' It will be observed that the Kobold in Germany is peculiarly a miners' superstition, while Cardiganshire has been a mining district from the times of the Romans. From his knocking propensity the Kobold is sometimes called Meister Hämmerling. —*Wedgwood, Dictionary of English Etymology.*]

Góby. *s.* Fish so called.

Young children, who are tried in
Go-carts, to keep their steps from sliding,
When members knit, and legs grow stronger,
Make use of such machine no longer. *Prior.*

On the greatest and most useful of all human inventions, the invention of alphabetical writing, Plato did not look with much complacency. He seems to have thought that the use of letters had operated on the human mind as the use of the *go-cart* in learning to walk, or of corks in learning to swim, is said to operate on the human body.—*Macaulay, Critical and Historical Essays, Lord Bacon*

Good speed. Two words rather than a compound: its elements, supposing there is no confusion, being *good*, and *speed*. In the first extract the construction is that of a verb, and *good speed* = wish me good speed. In the second the combination is that of an ordinary substantive and adjective. The instance, however, of Good-bye = *God-be-wi-ye*, suggests the likelihood of the true form being Godspeed, though of course both are possible.

And so *good-speed* me.
Beaumont and Fletcher, Maid of the Mill.

I know, downe I must;
And *good-speed* send me. *Middleton, The Witch.*

Goódhumoured. *part. pref.* [In the previous editions the accent is on the second syllable (*good-húmoured*), in which case the result is two words rather than a true compound. The pronunciation, however, here indicated, is by no means uncommon. Hence, the true view of the combination is that it gives two forms; (1) a pair of words, and (2) a compound. The latter only has its place in a dictionary. Hence, *good-húmour, good-húmoured, good-mánners, good-mórrow, good-nature, good-náturedly, good-sénse, good-will*, all of which are to be found in the previous editions, are omitted.] Having a good humour.

Goóding. *s.* See extract.

To go a *gooding*, is a custom observed in several parts of England on St. Thomas's day by women only, who ask alms, and in return for them wish all that is good, such as a happy new year, &c., to their benefactors, sometimes presenting them also with sprigs of ever-greens. In some parts of Surrey and Kent the custom is thus kept up; and in other counties *gooding* is the word, among the poor, for collecting before Christmas what may enable them to keep the festival.—*Todd.*

Disturb with mighty noise the sacred peace.
Dryden.

2. Tailor's iron.

Come in, tailor: here you may roast your *goose*.—*Shakespear, Macbeth*, ii. 3.

Cook one's goose. Do for one. *Your goose is cooked* = you are done for, in the sense of 'Your business is settled.' *Colloquial* or *slang*. The following refinement upon the ordinary interpretation (whatever that may be) is held by others besides the editor. *To cook a goose* is to *roast a martyr*. Such is the hypothesis. That the *h* and *g* are interchanged with one another in certain Sclavonic dialects in and on the confines of Bohemia is well known. Hence, the name of *Huss*, the martyr, would reach the Germans of Saxony and Silesia under the form of *Guss* (*Goose*). That a *goose* is found in many of the engravings of Luther is also well known; as is the fact that its import is to suggest the fate of *Huss* or *Guss*. The same explanation applies to the *Goose and Gridiron*, as the sign of an inn.

Goóseberry. *s.* [German, *krausbeere, kräuselbeere.*] Native fruit so called (Ribes grossularia).

Goosefoot or sowbane.—*Cole, Adam in Eden*, ch. cccix.

Goosefoot, from the shape of the leaf.—*Dr. A. Prior, Popular Names of British Plants.*

Goósegrass. *s.* [second element *grass*; perhaps *grease*.] Native plant so called. Its application is very uncertain. The Potentilla anserina is certainly connected with the *goose*; partly from the colour of its leaves being like that of the dung of the goose, and partly from its growth on the sides of ponds where the soil has been trodden by geese. Gooseweed, however, is the common name for this; Silverweed the best. The *goosegrass* of the extract, or the *goosegrass* that has been connected with the tansy, is Goosetongue, which even now may be found in gardens, cultivated, like tansy, as an herb. The plant, however, to which it is most commonly attached is the Galium Aparine, Gooseshare, or Cleavers; wherein, however, its application is probably the most inaccurate. It seems to be a corruption of *crosswort*; a term which applies generally to the Galiums. From the Galium Aparine it seems to have been extended to the Asperugo procumbens. It is not wanted as a name; all the plants (with the exception of the last named, which is rare, and to which it is not very suitable) having other names more appropriate. As a synonym to Cleavers (which is a good word) it should be erased in works on the English Flora.

Goosegrass, or wild tansy, is a weed that strong clays are very subject to.—*Mortimer, Husbandry.*

Goósequill. *s.* Quill from a goose's wing.

Goóseshare. *s.* See extract; also Harif.

It is also called in English goos-heiriffe, *gooseshare*, goosegrasse, cleavers (or clivers) because they cleave close to garments; and in so[me] countryes they call the seed beggarlice.—*Cole, Adam in Eden*, clxxxvii.

Let vultures gripe thy guts, for *gourd* and fullam holds.
Shakespear, Merry Wives of Windsor, i. 3.

What more should I say of false dice, of fulloms, high men, lowe men, *gourds*, and brizled dice, graners, demies, contraries.—*Greene, Art of Juggling*: 1612.

A bale of *gordes*, with as many high men as low men for passage.—*Decker, Bellman of London*: 1640.

The dry bones can reach at nothing now, but *gords* and ninepins.—*Beaumont and Fletcher, Scornful Lady.*

Górdian. *adj.* [from *Gordius*, a Phrygian husbandman, made king by the oracle of Apollo; who is said to have then tied up his utensils of husbandry in his temple, in a knot so intricate that no one could find out where it began or ended. It was pretended that whoever should loose this knot should be king of all Asia. Alexander the Great, without staying to untie it, cut it with his sword. The Latin *nodus Gordianus*, or *Gordian knot*, was hence adopted to express any difficult matter; and the cutting, as opposed to the undoing, of it, its summary, though doubtfully legitimate solution.] Intricate; difficult.

Turn him to any cause of policy,
The *Gordian* knot of it he will unloose,

Insinuating, wove with *Gordian* twine
His braided train. *Id., Paradise Lost*, iv. 347.

Morals reformed, health preserved, industry invigorated, instruction diffused, public burdens lightened, economy seated as it were upon a rock, the *gordian* knot of the Poor-laws not cut but untied, all by a simple idea in architecture.—*J. Bentham, Panopticon, or the Inspecting House*, pref.

Gore. *s.* [A.S. *gor* = wet filth.]

1. Blood effused from the body.

From which forth gush'd a stream of *gore*-blood thick,
That all her goodly garment stain'd around,
And into a deep sanguine dy'd the grassy ground.

Glutting his father's eyes with guiltless *gore*.

On Afric's sands, disfigur'd with their wounds,
To *gorge* the wolves and vultures of Numidia.
Addison, Cato.

This celebrated writer informs us, that the Mohammedans refuse to eat pork on account of a singular circumstance which happened to their prophet. It appears that Mohammed, having on one occasion *gorged* himself with food and drink till he was in a state of insensibility, fell asleep on a dunghill, and, in this disgraceful condition, was seen by a litter of pigs. The pigs attacked the fallen prophet, and suffocated him to death; for which reason his followers abominate pigs, and refuse to partake of their flesh.—*Buckle, History of Civilization in England*, vol. i. ch. vi.

To tell the people in what danger he was.
B. Jonson, Catiline's Conspiracy.

About his neck a threefold *gorget*,
As rough as trebled leathern target.
Butler, Hudibras.

2. See extract.

[*Gorget* was formerly used for that part of the female dress called a ruff. It is in our old lexicography, and is so used by Cleaveland in his poems; but is now obsolete; though Dr. Johnson explains neckerchief by *gorget*.—*Todd.*]

3. In *Surgery.* Instrument used in the operation of cutting for the stone.

Gorgets are of two kinds, cutting and blunt. The cutting *gorget* is a kind of knife furnished with a beak which runs in the groove of the staff, so that the *gorget* being pushed along it divides the neck of the bladder and the prostate gland. The blunt *gorget* is merely a sort of large directory for guiding the forceps in the bladder. The *gorget* is now seldom used: the cutting one being superseded by a simple knife, and the blunt one by the use of the finger.—*Hooper, Medical Dictionary.*

Gorílla. *s.* [an African word preserved in the Greek translation or abstract of the Periplus of Hanno, in the plural form γόριλλαι; these being large apes of the Western Coast of Africa. Word for word *gorilla* and *drill* are probably the same. Animal for animal, the Gorilla of the Carthaginians was probably the chimpanzee.] Large anthropoid ape (the largest of the class) so called, native of equatorial Western Africa, especially the districts on the Gaboon; Troglodytes Gorilla.

In the *gorilla* the dorso-lumbar vertebræ, as in the chimpanzee, are seventeen in number, the thirteenth dorsal answering to the first lumbar in man. . . . The whole series of true vertebræ in the *gorilla* form but one curvature, which is slightly concave forward, especially in the dorsal region. . . . In the *gorilla* the scapula is broader than in the chimpanzee, but differs from that of man in the more oblique course of the spine, which gives greater extent to the superior costa. . . . The clavicle is thicker than that in man. . . . The humerus, though surpassing in length that of man, is thicker and stronger in all its ridges and processes; especially at the lower extremity, the transverse diameter of which surpasses that of the upper extremity of the bone in a greater degree than in man. . . . The medullary artery enters the fore part of the shaft, but nearer the middle of the bone in the *gorilla* than in man: in both the course of the canal is towards the elbow-joint. . . . The difference from the chimpanzee, most significant of their relative position in the quadrumanous series, presented by the antibrachium of the *gorilla*, is its inferiority of length compared with the humerus. The bones of the wrist agree in number and relative position with those of man; but the differences of shape and proportion give a greater breadth to the carpal segment in proportion to its length, in the *gorilla*. . . . The heel in the *gorilla* makes a more decided backward projection than in the chimpanzee; the heelbone is relatively thicker, deeper, more expanded vertically at its hind end, besides being fully as long as in the chimpanzee. Among all the tailless apes the calcaneum in the siamang and other gibbons least resembles in its shape or proportional size that of man. Although the foot be articulated to the leg with a slight inversion of the sole, it is more nearly plantigrade in the *gorilla* than in the chimpanzee. The orang departs far, and the gibbons farther, from the human type in the inverted position of the foot. —*Owen, Anatomy of Vertebrates.*

Góring. *verbal abs.* Puncture; prick.

His horses' flanks and sides are forc'd to feel
The clinking lash, and *goring* of the steel.

Gorreled. *adj.* Stuffed as a paunch.

For why, their coyn will buy the wine,
And cause a running barrell;

(Nares by H. & W.)

Such dread his awful visage on them cast;
So seem poor doves at *goshawk's* sight aghast.
Fairfax.

Here are also averies of hawks, and sundry other birds; as, *goshawks*, lannars, hobbies, &c.—*Sir T. Herbert, Relation of some Years' Travels into Africa and the Great Asia*, p. 383.

The *goshawk* is at once distinguished from the falcons by the lobe or festoon instead of the sharp tooth on the cutting edge of the mandible. . . . The *goshawk* has also been separated generically from the sparrow hawk, on account of its stronger and shorter tarsus, which is covered with feathers on the upper part; and by the want of the elongation in the middle toe. . . . Inferior in powers to the falcons, though equal in size to the largest of them, the *goshawk* is yet the best of the short-winged hawks; but its habits as well as its mode of flying at its game are very different. . . . The *goshawk* was formerly . . . flown at hares, rabbits, pheasants, grouse, and partridges.—*Yarrell, British Birds.*

Gósling. *s.* Young goose; goose not yet full grown.

Why do you go nodding and waggling so like a fool, as if you were hipshot? says the goose to her *gosling*.—*Sir R. L'Estrange.*

Nature hath instructed even a brood of *goslings* to stick together, while the kite is hovering over their heads.—*Swift.*

Góspel. *s.* [A.S. *godspel.*]

1. See extract.

What the word εὐαγγέλιον in Greek, which we render *gospel*, signifies among authors, is ordinarily known, viz. from εὖ and ἀγγέλλω, good news, or good tidings. Thus the angel speaks of the birth of Christ, ΕΥΑΓΓΕΛΙΖΟΜΑΙ ὑμῖν χαρὰν μεγάλην, I bring you good tidings of great joy, i.e. very joyful good tidings. Only in this sacred use of it, there seems to be a metonymy, or figure very ordinary, whereby the word which signifies good news, is set to denote the history of that good news, the birth, and life, and resurrection of Christ, which all put together is *that* joyful news or good tidings. . . . And so this word godspel, or by euphony *gospel*, in Wicliffe's translation, and ever since, notes these good tidings delivered; as first by an angel; and after that, by the apostles by word of mouth; so here in writing, by way of history also; and in brief signifies that blessed story of the birth, life, actions, precepts, and promises, death and resurrection of Christ, which, of all other stories in the world, we Christians ought to look on with most joy, as an εὐαγγέλιον or good word, i.e. a *gospel*.—*Hammond, Paraphrases and Annotations on the New Testament*, annot. 1.

2. The New Testament as the especial book of the Christian creed.

Thus may the *gospel* to the rising sun
Be spread, and flourish where it first begun.
Waller.

All the decrees whereof Scripture treateth are conditionate, receiving Christ as the *gospel* offers him, as Lord and Saviour; the former, as well as the latter, being the condition of scripture-election, and the rejecting, or not receiving him thus, the condition of the scripture-reprobation.—*Hammond.*

How is a good Christian animated and cheered by a stedfast belief of the promises of the *gospel!*—*Bentley.*

This [*gospel*] is instanced as one of the words which is practically ambiguous, from its different

applications, even though not employed (as it sometimes is) in different senses. Conformably to its etymological meaning of good-tidings, it is used to signify (and that especially and exclusively) the welcome intelligence of salvation to man, as preached by our Lord and his followers. But it was afterwards transitively applied to each of the four histories of our Lord's life, published by those who are called the Evangelists. And the term is often used to express collectively the *gospel*-doctrines; i.e. the instructions given men how to avail themselves of the offer of salvation: and preaching the *gospel* is accordingly often used to include not only the proclaiming of the good tidings, but the teaching of what is to be believed and done, in consequence. This ambiguity is one source of some important theological errors: many supposing that *gospel* truth is to be found exclusively, or chiefly, in the *gospels*; to the neglect of the other sacred writings.—*Whately, Logic, Ambiguous Terms*, appendix.

3. Rule as that of divine revelation; divinity; theology.

Help us to save free conscience from the paw
Of hireling wolves, whose *gospel* is their maw.

Góspeler. *s.*

1. Historian of the acts of Christ; i.e. evangelist, which word it translates: (used in this sense by the reformers of the school of Wycliffe, but when applied to one whose faith was founded upon the Scriptures direct, rather than upon the current interpretations of them and to the advocates of private judgement as opposed to the authoritative interpretation of the Church, invested with a disparaging import; though, in many cases, this lies in some adjective with which it is combined); Bible Christian.

Our new *gospellers* do spurne and kicke against it.—*Martin, Marriage of Priestes*, sign. Q. iii. b: 1554.

What, is Juventus become so tame,
To be a new *gospeller?*

That as well the catholicks with the *gospellers*, as they again with the catholicks, be and remain in true and unfeigned peace.—*Accord of Ulm, Sir H. Wotton's Remains*, p. 533: 1620.

How much have we declined from that zeal and love, which our Fathers bore to the Reformation! There were two things that were visible in the practice of those who first embraced it among us: the one was the great pleasure they took in reading the Scriptures, from whence they were in derision called *gospellers.—Bishop Burnet, Fast Sermon*: 1680.

These *gospellers* have had their golden days,
Have trodden down our holy Roman faith.
Rowe, Jane Shore.

Góssamer. *s.* [see extract from Wedgwood.] Light filmy threads either floating in the air, or stretched from blade to blade along the grass: (common in summer). They are the delicate webs of either spiders or moths. Such is the true gossamer. Less properly it is applied to the fine floating dust, especially that which is seen along the line of a ray of light in a partially darkened room; as, also, to the small scales (farina or dust) of the wings of the Lepidoptera, i.e. the moths and butterflies.

A lover may bestride the *gossamers*
That idle in the wanton summer air,
And yet not fall; so light is vanity.

Dryden, Translation of Virgil.

[*Gossomer.*—Properly God-summer. German, *der sommer, fliegende sommer, sommer-fäden* (summer-threads), *Marien fäden, Unsrer lieben frauen fäden*, from the legend that the *gossomer* is the remnant of our Lady's winding-sheet, which fell away in fragments when she was taken up to heaven. It is this divine origin which is indicated by the first syllable of the English term. In like manner the Lady-cow is in Brittany *la petite vache du bon Dieu*, in German *Marien-käfer*, or *Gottes kühlein.—Wedgwood, Dictionary of English Etymology.*]

Góssamery. *adj.* Having the character of, consisting of, or abounding in, gossamer; light; flimsy; unsubstantial.

1. One who answers for the child in baptism.

Our christian ancestors, ůnderstanding a spiritual affinity to grow between the parents and such as undertooke for the child at baptisme, called each other by the name of *Godsib*, which is as much as to say, that they were sib together, that is, of kin together through God. And the child, in like manner, called such his God-fathers, or God-mothers.—*Verstegan, Restitution of decayed Intelligence.*

Go to a *gossip's* feast, and go with me;

Gossoón. *s.* [Gaelic.] Lad, a low attendant formerly in the wealthy families of Ireland. *Irish rather than English.*

Goth. *s.* In its historical and ethnological sense a proper rather than a common name, signifying that portion of the so-called barbarians who overthrew the Roman empire, especially those under Alaric and Theodoric, and those who were the most closely connected with the Vandals. All that has nothing of the ancient gusto is called a barbarous or *Gothique* manner, which is not conducted by any rule, but only follows a wretched

fancy which has nothing in it that is noble.—*Id., Observations on Du Fresnoy's Art of Painting.* (Ord MS.)

When do you dine, Emilia? At the old *Gothic* hour of four o'clock, I suppose.—*Emilia Wyndham*, ch. xxi.

When it was laid, you care not for the year;
On this, as parts decay'd by time and storms,

(And our small wonders) have decided thus:
'Yon noble *Gothic* arch,' 'That *Gothic* door;'
So have they said: of proof you'll need no more.
Crabbe, The Borough.

The name of *Gothic* has ascended from its primal meaning, that of utter contempt, to the highest honour; it is become conventional for the architecture of the middle ages, and commands a kind of traditionary reverence. Perhaps Teutonic, or at least Transalpine, might be a more fit appellation. It was born, and reached its maturity and perfection north of the Alps. *Gothic*, properly so called, is a stranger and an alien in Italy.—*Milman, History of Latin Christianity*, b. xiv. ch. ii.

The law of continuity is this:—that a quantity cannot pass from one amount to another by any change of conditions, without passing through all intermediate magnitudes according to the intermediate conditions. This law may often be employed to disprove distinctions which have no real foundation. The method of *gradation* consists in taking a number of stages of a property in question, intermediate between two extreme cases which appear to be different. This method is employed to determine whether the extreme cases are really distinct or not. The method of *gradation*, applied to decide the question, whether the existing geological phenomena arise from existing causes, leads to this result:—That the phenomena do appear to arise from existing causes, but that the action of existing causes may, in past times, have transgressed, to any extent, their recorded limits of intensity.—*Whewell, Novum Organon renovatum, Aphorisms*, 49—51.
And as, between those relative positions in which the coexistence of two objects can be known only by a slight turn of the head, and those in which it can be known only by turning the head half round, there is also a series of imperceptible transitions; it follows that the coexistence of two dots lying close together, and that of two objects lying respectively behind and before the observer, are known in modes which, however apparently different, are united by insensible *gradations*, and must be primordially the same.—*Herbert Spencer, Principles of Psychology*, p. 305.

S. Mill, System of Logic*, b. iii. ch. xv. § 3.
